Introduction

What is Robo2 Document Management System?

Robo2 Document Management System (DMS) is a software solution designed to store, manage, track, and organize electronic documents and images of paper-based information. It helps individuals and organizations streamline documents, improve efficiency, and ensure secure access to information. A DMS is particularly useful for businesses that deal with large volumes of documents and need to maintain compliance, version control, and collaboration with metadata.

Purpose of Document Management System

A Document Management System (DMS) aims to create a centralized, organized digital repositories for all documents, eliminating the need for physical storage and reducing the risk of lost or misplaced files while cutting costs associated with printing and manual handling. It facilitates teamwork by allowing multiple users to access, edit, and comment on documents in real-time, ensures security through role-based permissions and encryption, and maintains version control to track document changes over time. Additionally, it enables quick and accurate document retrieval using advanced search features like full-text search, filters, and metadata search improving efficiency.

Login

The login feature ensures secure access to the Document Management System (DMS). To log in, users must enter valid credentials (username/email and password) to authenticate their identity and gain access to the system.

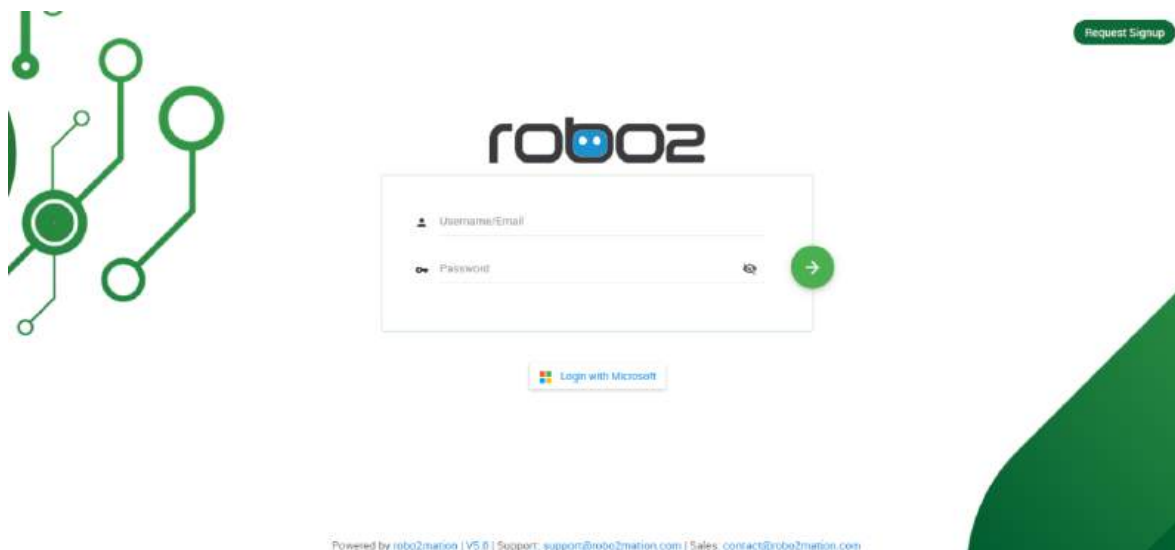

Figure 01: Login Page

System Login

Steps to login:

- Open your web browser and navigate to the DMS login page (relevant IP or Domain Name).
- Enter your valid username/email and password.
- Click the Login (→) button to proceed.
- With a valid username and password, you will be redirected to the DMS dashboard.

Dashboard

The Dashboard provides a centralized view of document management activities, featuring **Count DMS** to track document numbers, **DMS Upload** for adding new documents, **DMS Document Summary** for metadata and status overview, **DMS DocType Summary** for document categorization overview, and **DMS My Documents** for quick access to user-specific files, ensuring streamlined organization and accessibility.

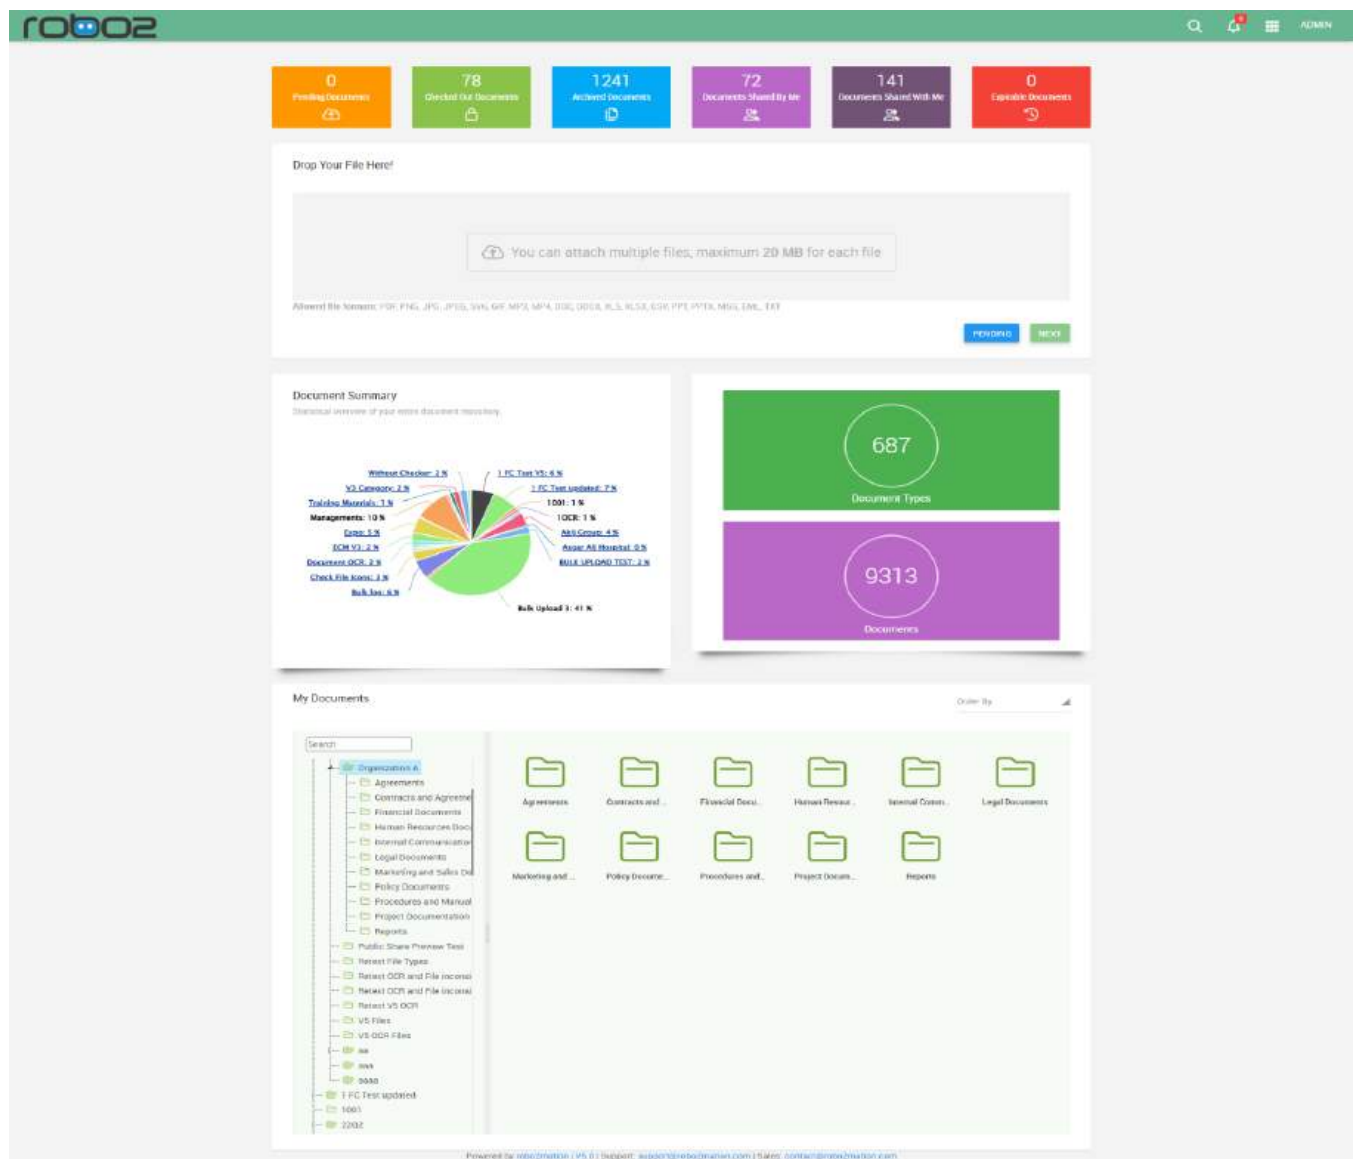

Figure 02: DMS Dashboard

DMS Count Widget: Users can see document count of Pending Documents, Checked out Documents, Archived Documents, Document Shared by Me, Document Shared with Me and Expirable Documents as user will be redirected to the relevant document pages.

DMS Upload: Users can upload documents with a maximum document size limit of 20 MB allowing PDF, PNG, JPG, JPEG, SVG, GIF, MP3, MP4, DOC, DOCX, XLS, XLSX, CSV, PPT, PPTX, MSG, EML, TXT file formats.

DMS Document Summary: Users can see Document Summary within all the data in a pie chart and navigate through.

DMS DocType Summary: Users can see the total number of Document types and Document count and navigate through.

DMS My Documents: All published document types are accessible in My Documents allowing user to preview and take necessary action on the uploaded documents.

User Management

The User Management feature allows administrators to create, update, and manage user accounts, groups, roles and signup requests within the DMS. Administrators can assign roles, set permissions, and control access levels to ensure secure and efficient document handling.

To Access the User Management, click on the menu icon and click on "User Management" option.

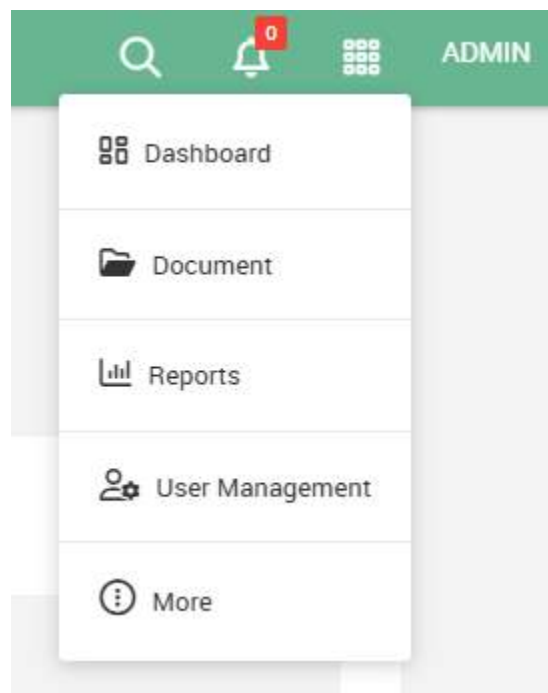

Figure 03: Menu

Users

Users of a DMS are individuals or entities who interact with the system, such as administrators (manage settings), authors (create/upload documents), reviewers (approve/feedback), and regular users (access/search/download documents). Each user type has different access levels and roles.

Maker-Checker Feature

The **Maker-Checker** feature introduces a two-step approval process for creating new users, ensuring higher security and accountability. In this model:

- **Maker:** Creates a user request but cannot directly create the user.
- **Checker:** Reviews the request and either approves or rejects it.

This ensures that no single user can independently create and activate accounts without oversight.

Add Maker/Checker User by Admin:

Admin (user id:1) can directly create **maker/checker** user without any approval.

Name	User Name	Email	Department	Branch	Role
ABCD Updated Al-amin	sol.user1	test_abcd.user@abc.com	SOL	SOL	role_2
API USER	apiv5	apiv5@robo2mation.com			API V5 Roles
API User	api.user	api.user@gmail.com			All API Permissions
Abu Souyeb	souyeb	souyeb@robo2mation.com			General User
Alamin Shohan	shohan164	test_164shohan@abc.com			General User
Alamin Shohan	shohan15	test_15shohan@abc.com			General User
Alamin Shohan	shohan148	test_148shohan@abc.com			General User
Alamin Shohan	shohan79	test_79shohan@abc.com			General User
Alamin Shohan	shohan13	test_13shohan@abc.com			General User
Alamin Shohan	shohan119	test_119shohan@abc.com			General User

Figure 04: Users

Admin (user id: 1) users can create maker/checker users by following steps:

- Navigate to the **Menu → User Management → Users**.
- Click on “Add User” option to open the user creation form.

The screenshot shows the 'Add New User' form in the robo02 User Management interface. The form is titled 'Add New User' and contains the following fields and controls:

- First Name ***: Text input field.
- Last Name ***: Text input field.
- User Name ***: Text input field with a 'FETCH FROM AD' button next to it.
- Email ***: Text input field.
- Address**: Text input field.
- Phone**: Text input field.
- Position**: Text input field.
- Expiry Date**: Date picker showing '2025-06-18 03:00'.
- Status ***: Dropdown menu with 'Active' selected.
- Role ***: Dropdown menu with 'Nothing Selected'.
- Profile Picture**: Image upload area with 'UPLOAD IMAGE' and 'REMOVE' buttons.
- Signature**: Image upload area with 'UPLOAD IMAGE' and 'REMOVE' buttons.
- Active Directory User**: Checkbox.
- Password ***: Text input field.
- Confirm Password ***: Text input field.
- Comment**: Text input field.
- Buttons**: 'ADD USER' and 'CANCEL' buttons at the bottom.

The interface includes a teal header with the robo02 logo and a sidebar with 'User Management'. The footer contains the text: 'Powered by robo02motion | V6.0.1 | Support: support@robo02motion.com | Sales: contact@robo02motion.com'.

Figure 05: Add User

- Fill out User Details
 - First Name (required and Name should contain only alphabets, special character in (. - _ / ()), and length should be between 1 to 20 characters)
 - Last Name (required and Name should contain only alphabets, special character in (. - _ / ()), and length should be between 1 to 20 characters)
 - Username (must be unique)
 - Email Address (must be valid and unique)
 - Upload Profile Picture (Optional)
 - Upload signature (Optional)
 - Address (optional)
 - Phone Number (optional)
 - Position (optional)
 - Expiry Date
 - Status (active, inactive or block)
 - Role (e.g., Admin, General User, Viewer)
 - Active Directory User Checkbox: System will tick it automatically, if the user comes from Active Directory.
 - Password (required): For active directory user, password won't be shown.
 - Confirm Password (required): For active directory user, confirm password won't be shown.
 - Comment (Optional)
- Click on "Add User" to complete user creation

User Creation Request through Maker:

User with "User Maker" permissions can send user creation requests as shown below. However, user won't be able to login to the system unless a checker approves it.

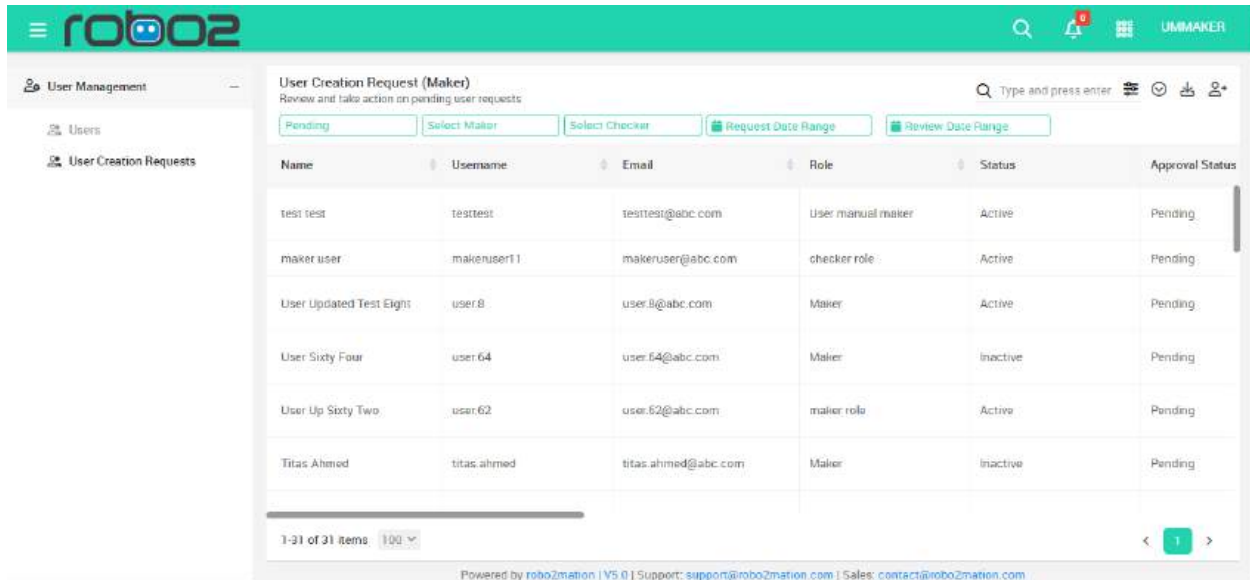

Figure 06: User Creation Request

Maker user can send create new user request by following steps from both “Users” & “User Creation Requests” page:

- Navigate to the **Menu → User Management → Users/User Creation Requests**.
- Click on “Add User Request” option to open the user creation form.

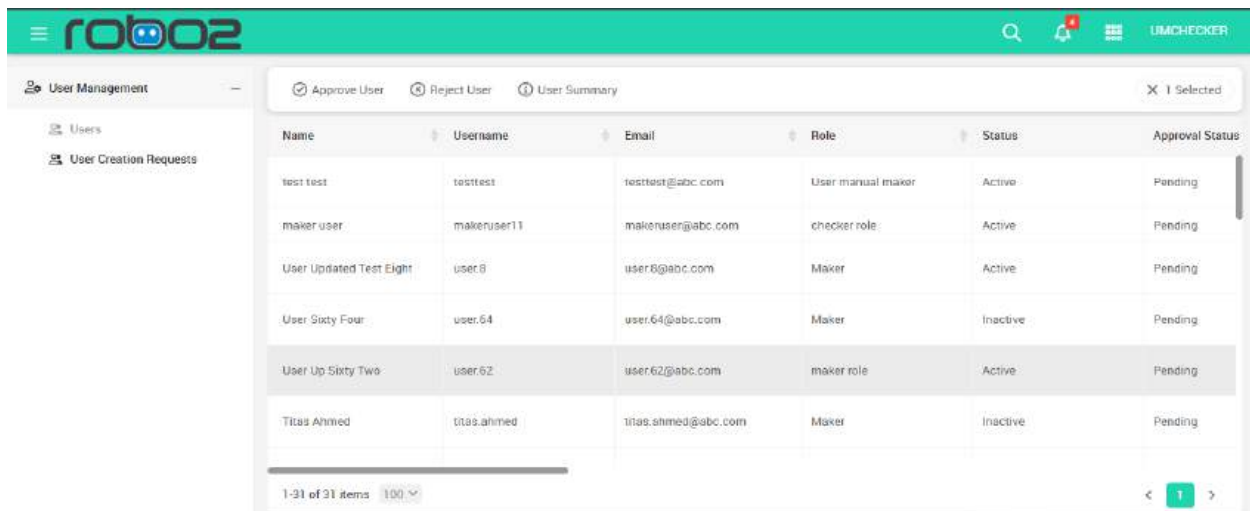

Figure 07: Send User Creation Request

- Fill out User Details
 - First Name (required and Name should contain only alphabets, special character in (. - _ / ()), and length should be between 1 to 20 characters)
 - Last Name (required and Name should contain only alphabets, special character in (. - _ / ()), and length should be between 1 to 20 characters)

- Username (must be unique)
- Email Address (must be valid and unique)
- Upload Profile Picture (Optional)
- Upload signature (Optional)
- Address (optional)
- Phone Number (optional)
- Position (optional)
- Expiry Date
- Status (active, inactive or block)
- Role (e.g., Admin, General User, Viewer)
- Active Directory User Checkbox: System will tick it automatically, if the user fetched from Active Directory.
- Password (required): For active directory user, password won't be shown.
- Confirm Password (required): For active directory user, confirm password won't be shown.
- Comment (Optional)
- Click on “Add User Request” button to send user creation request.

Approve/Reject User through Checker:

User with “User Checker” permissions can approve/reject user creation requests as shown below. However, user won't be able to login to the system unless a checker approves it.

The screenshot shows the 'robo2' User Management interface. The left sidebar has 'User Management' selected, with sub-items 'Users' and 'User Creation Requests'. The main area has tabs for 'Approve User', 'Reject User', and 'User Summary'. Below the tabs is a table with columns: Name, Username, Email, Role, Status, and Approval Status. The table contains 7 rows of user creation requests, all with 'Pending' approval status. At the bottom, it shows '1-31 of 31 items' and a page number '1'.

Name	Username	Email	Role	Status	Approval Status
test test	testtest	testtest@abc.com	User manual maker	Active	Pending
maker user	makeruser11	makeruser@abc.com	checker role	Active	Pending
User Updated Test Eight	user.8	user.8@abc.com	Maker	Active	Pending
User Sixty Four	user.64	user.64@abc.com	Maker	Inactive	Pending
User Up Sixty Two	user.62	user.62@abc.com	maker role	Active	Pending
Titus Ahmed	titus.ahmed	titus.ahmed@abc.com	Maker	Inactive	Pending

Figure 08: Approve/Reject User

Checker user can approve or reject a user by following steps:

- Navigate to the **Menu → User Management → Users Creation Request**.
- To approve or reject user, First need to select the user and simply clicking on the user's name to select.
- Click on the “approve or reject” icon (☒ or ☒) to create or reject a user respectively.
- When the Checker clicks on the Approve (☒) icon, the user will be created.
Notes: System will allow that user to login to the system with valid credentials.
- For rejection (☒), a popup will appear where the Checker must provide a reason before clicking the Reject button.
Notes: System won't allow rejected users to login to the system.

Find Requested User through Maker/Checker:

Maker/Checker user can find their requested users from “User Creation Requests” page where they can find user by filtering with different data & also can search as shown below:

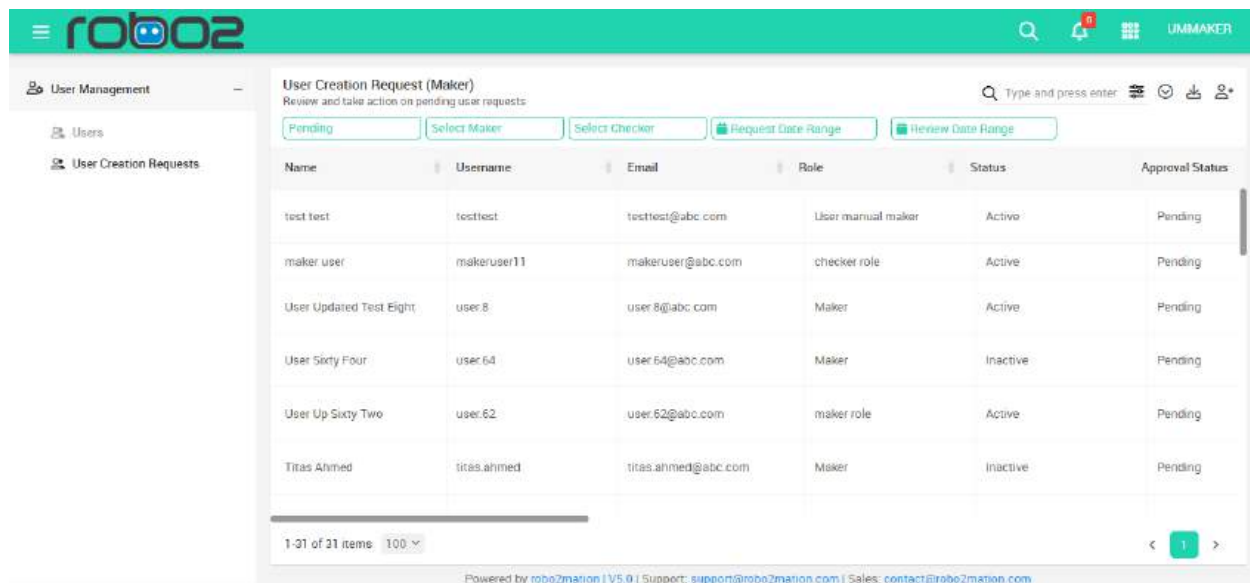

Figure 9: Users Filter

- **Status Filter:** View user requests based on their status:
 - **Pending** – Requests submitted by Maker but not yet reviewed. If the user selects Pending, they can see which users are still waiting for approval.
 - **Approved** – Requests reviewed and approved by the Checker. If the user selects Approved, they can see which accounts have already been approved through checker.
 - **Rejected** – Requests reviewed and declined by the Checker. If the user selects Rejected, they can see which users were rejected.
- **Maker Filter:** User can filter requests by a specific Maker who submitted the user request.
- **Checker Filter:** User can filter requests by a specific Checker who reviewed the request.
- **Request Date Range:** Allows the user to see which users were requested within the selected date range.
- **Review Date Range:** Allows the user to check which users were approved or rejected within the selected date range.
- **Search User's Creation Request List:** User can be found by searching with their Name, Username, Email, Role, Branch, Comment
 - Navigate to the **Menu** → **User Management** → **Users**.
 - Click on the search bar.
 - To search for a user from the user list, click on the search icon and search by “Name”, “username”, “role”, “email” rest of the things.
 - The matched results will appear accordingly.
- **Sort User:** Clicking a column's sort icon arranges its data in ascending order; clicking again switches to descending. Each column can be sorted both ways independently.

- **Download User:** When the user clicks on the Excel button, two options will appear: **Excel** and **Print**.
 - If the user selects Excel, the data will be downloaded in Excel format.
 - If the user selects Print, a print preview window will open, allowing the user to print the data directly.

Edit User

Admin user (user id:1) can update user directly as below:

To edit user information,

- First choose the user to edit by simply clicking on the user's name.
- Click on the "Edit User" icon (pen icon) to preview user information.
- Edit the fields as necessary and click on the "Update User" button to send the update request.
- User information will be updated, and the page will refresh.

Edit User through Maker:

- **For Pending User:** Maker user can send user update request. Once checker approves it, the updated information will be affected immediately.
- **For Approved User:** Maker users can send user update requests for the approved users. Once checker approves it, the updated information will be affected immediately.

Notes: If user rejects the user's update request, then system should continue with previous data.

To edit user information,

- First choose the user to edit by simply clicking on the user's name.
- Click on the "Edit User" icon (pen icon) to preview user information.
- Edit the fields as necessary and click on the "Update User Request" button to send the update request.
- User information will be updated, and the page will refresh.

Name	User Name	Email	Department	Branch	Role	Status
Abu Souyeb	souyeb	souyeb@abc.com			Maker	Active
Admin User One	admin.user1	admin.user1@abc.com			Admin	Active
Administrator Administrator	admin	admin@worldnow.dev			Admin	Active
Branch Two User	branch.user	branch.user@abc.com	SQA	Grounds Committee	Branch	Active

Checker A User Eight	checker.user8	checker.user8@abc.com	Operations	Card Department	Checker	Active
Checker Updated User Thirty One	checker.user31	checker.user31@abc.com			Checker	Active
Department User	dept.user	dept.user@abc.com		MI	Departments	Active
Department User	dept.user	dept.user@abc.com			Department	Active

Figure 10: Edit Users

Approve/Reject User Update Request through Checker:

- **For Pending User:** Checker can either Approve or Reject the update request submitted by the Maker.
 - If approved → The user information will be applied immediately & create a maker user.
 - If rejected → Checker **Rejects** a user creation request, no account will be created.
- **For Approved User:** Checker can review new update requests submitted by the Maker for already approved users.
 - If approved → The updated information will be applied immediately.
 - If rejected → The system will continue with the previous information.

Notes: Updated information will only become visible after Checker's approval. Until approval, the Maker will not see the updated data. So, if user rejects the user update request, then system should continue with previous data.

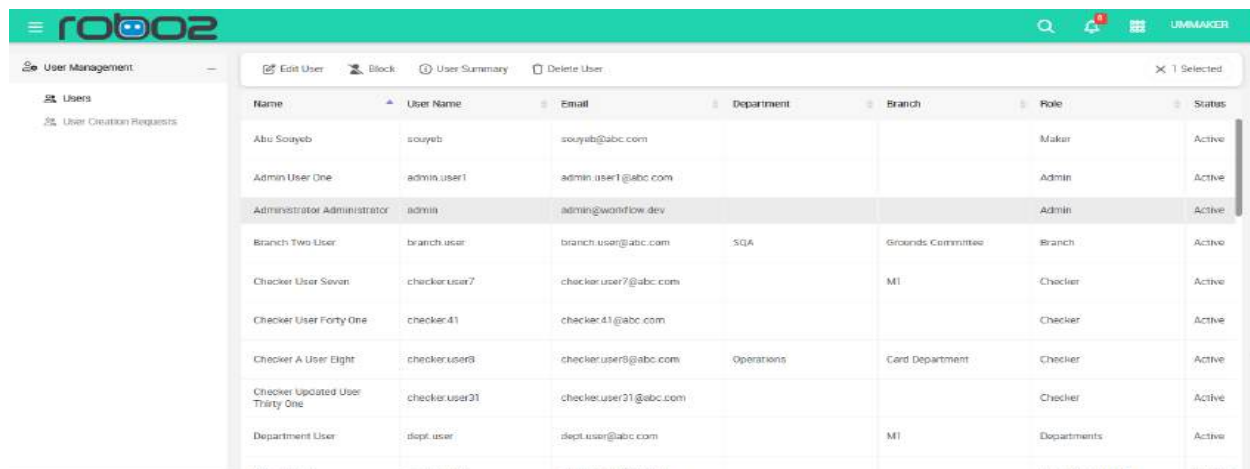

Block/Unblock User

If any user is found suspicious or has security risks, the system allows permitted users to block the user account immediately.

Admin or authorized users can block users by following steps:

- Navigate to the **Menu → User Management → Users**.
- To block a user, First choose the user by simply clicking on the user's name.
- Click on the "Block" (Block icon) to block a user.

Notes: Block will take effect immediately without checkers' approval.

Name	User Name	Email	Department	Branch	Role	Status
Abu Souyeb	souyeb	souyeb@abc.com			Maker	Active

Department User	dept.user	dept.user@abc.com			Team Management	Inactive

Figure 11: Block Users

To unblock a user,

- Navigate to **Menu → User Management → Users**.
- Select the blocked user by clicking on the user's row.
- Click on the Edit User option.
- In the Status field, change the status from Blocked to Active.
- Submit the update request.
- The request must be reviewed by a Checker.
- Once the request is Approved, the user account will be reactivated.

After approval, the user can **log in** again and access the system normally. If the request is **Rejected**, the account will remain blocked.

Figure 12: User Unblock

Lock/Unlock User

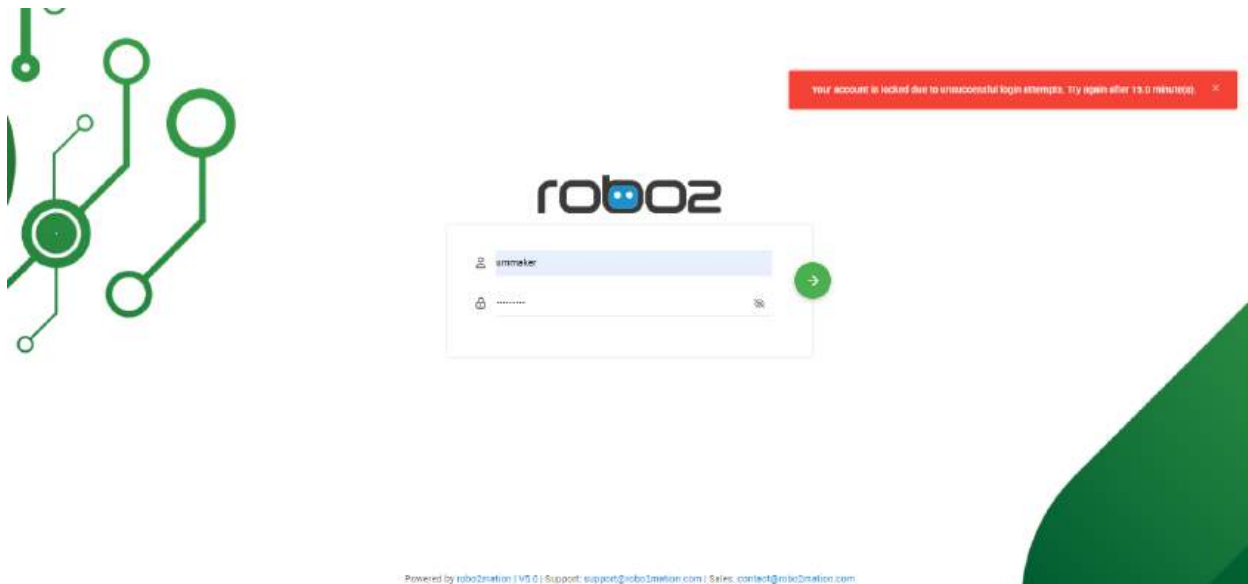

Figure 13: User Lock

- If a user enters an incorrect password more than three consecutive times, the account will be automatically locked.
- Locked users will not be able to log in until the account is unlocked by an authorized user.

To unlock a user,

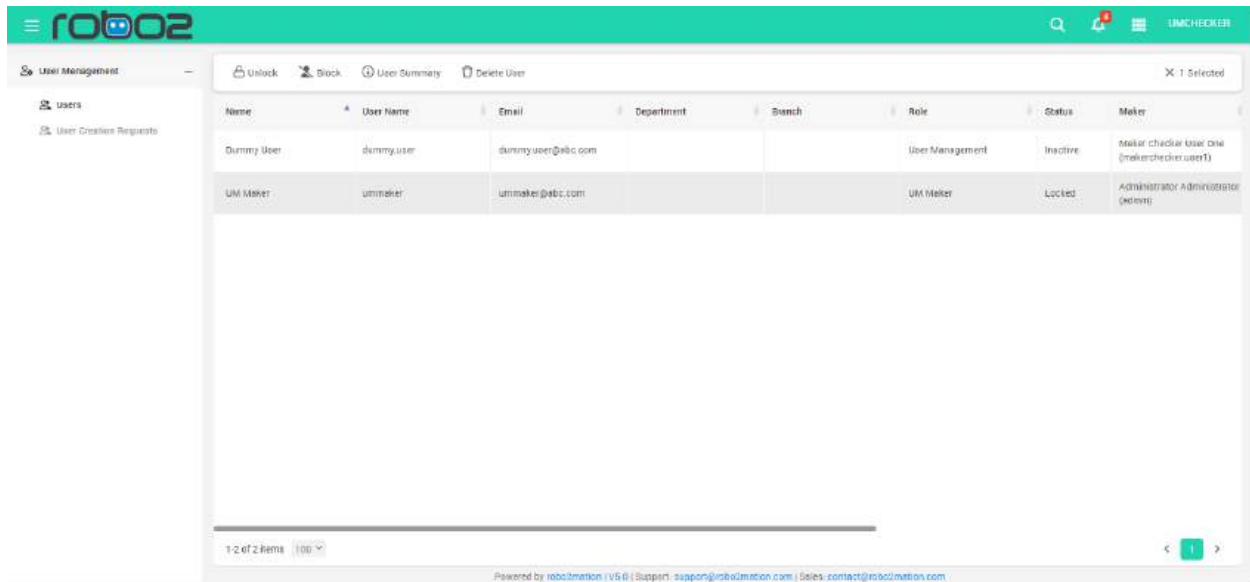

Figure 14: User Unlock

- An Admin, user with “User Maker”, or “User Checker” permission can unlock the locked account.
- To unlock, navigate to the User Management → Users list.
- Select a locked user, and the Unlock option will become visible.
- Click on “Unlock” button to unlock the user.

Note: Once unlocked, the user can log in using their correct credentials. Unlock will take effect immediately without checkers’ approval.

User Summary

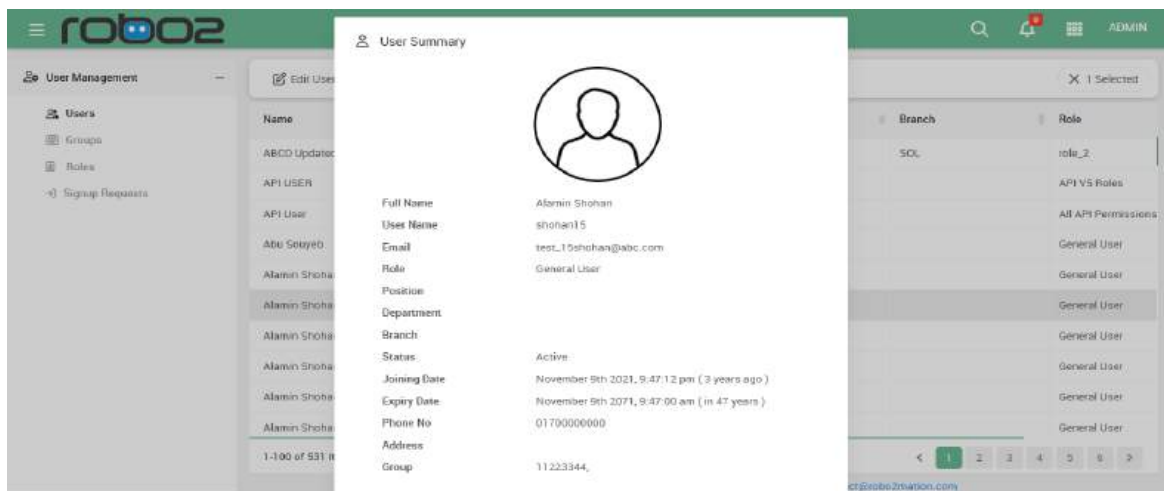

Figure 15: User Summary

- Navigate to the **Menu → User Management → Users**.
- To view user summary, Select the user by simply clicking on the user and click on the user summary icon.
- A pop-up page will appear with the user’s summary.

Delete User

The Delete User feature allows admin or permitted users to remove user accounts from the system. Now, we have the options to delete users.

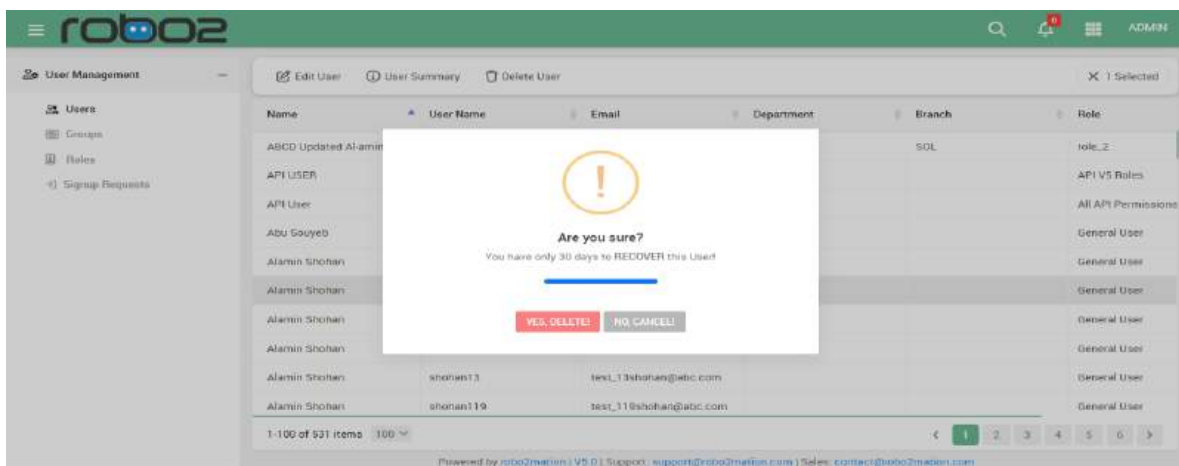

Figure 16: Delete User

Admin or authorized users can delete a user information by following steps:

- Navigate to the **Menu → User Management → Users**.
- Select user and click on the “delete” icon.
- A pop-up window will open with the “Yes, Delete” and “No, Cancel” button.
- Click on “Yes, Delete” to delete the user.

Deleted User

Admin user (user id: 1) can view deleted user list.

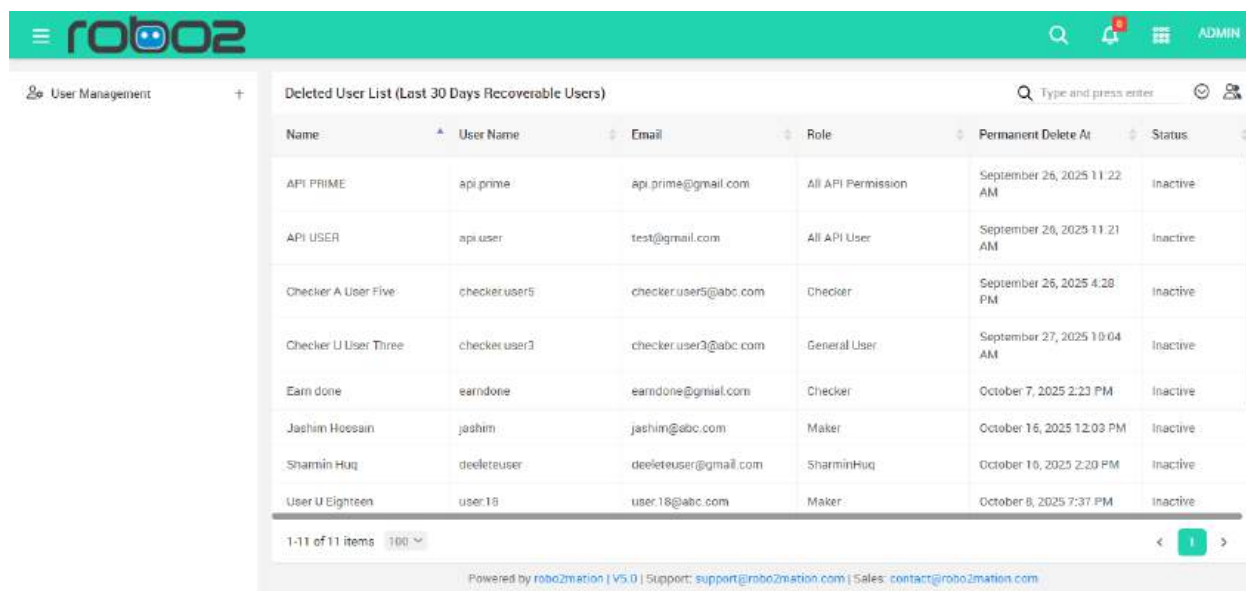

Figure 17: Deleted User List

Search User's from User List

- Navigate to the **Menu** → **User Management** → **Users**.
- Click on the search bar.
- To search for a user from the user list, click on the search icon and search by “Name”, “username”, “role”, “email” or rest of the things.
- The matched results will appear accordingly.

Column Toggle & Download

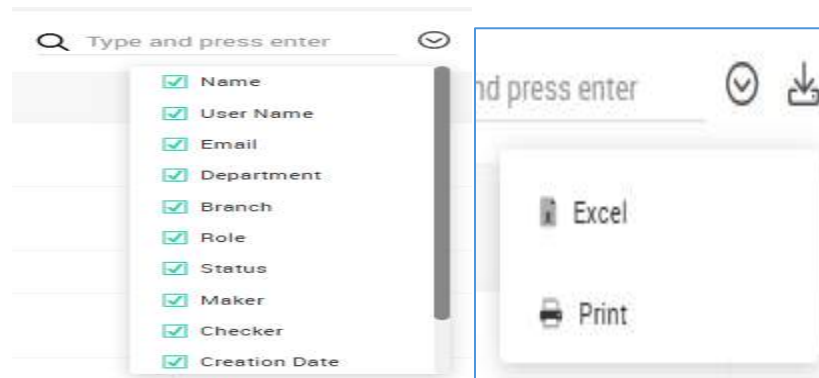

Figure 18: Column toggle & Download

- With the toggle option user can customize the data table columns.
- Only selected columns in toggle option will be displayed in the data table.
- With the Download icon, the data table information will be downloaded in excel format.

Sort User: Clicking a column's sort icon arranges its data in ascending order; clicking again switches to descending. Each column can be sorted both ways independently.

Figure 19: Sort Table Data

Groups

Groups in the DMS enable administrators to organize users and assign shared permissions for document access and uploads. By linking groups to Access Groups, Owner Groups, Locked Metadata group and Checker Group within DocType categorizations, administrators can control which users can access or upload specific document types, ensuring secure and efficient permission management.

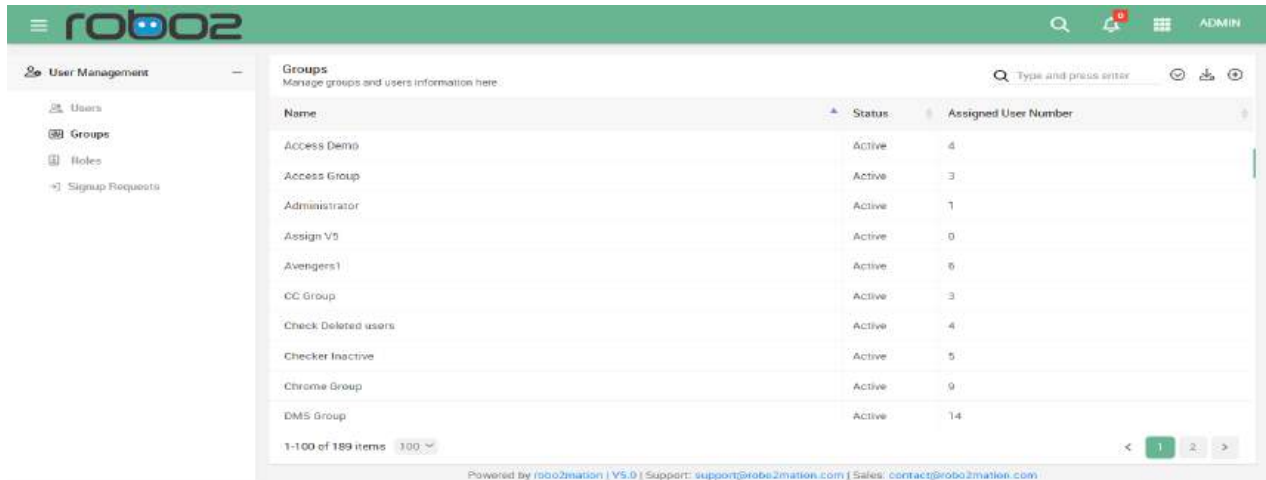

Figure 20: Groups

Create Group

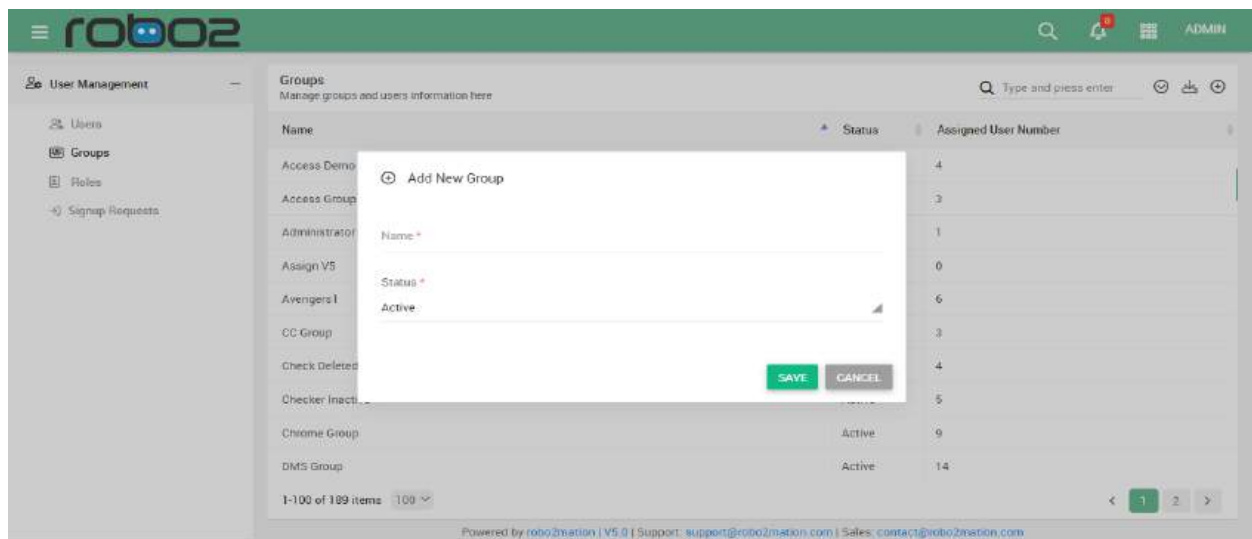

Figure 21: Create Groups

Admin or user with “Manage Group” permission can create a group by following steps:

- Navigate to the **Menu → User Management → Groups**.
- In ‘Groups’, click on the “+” icon.
- Enter a group name.
- Click on the Save button and the group will be created.

Assign Users to Group

Edit Group Assign User Delete Group Group Details			X 1 Selected
Name	Status	Assigned User Number	
Access Demo	Active	4	

Figure 22: Options on selection

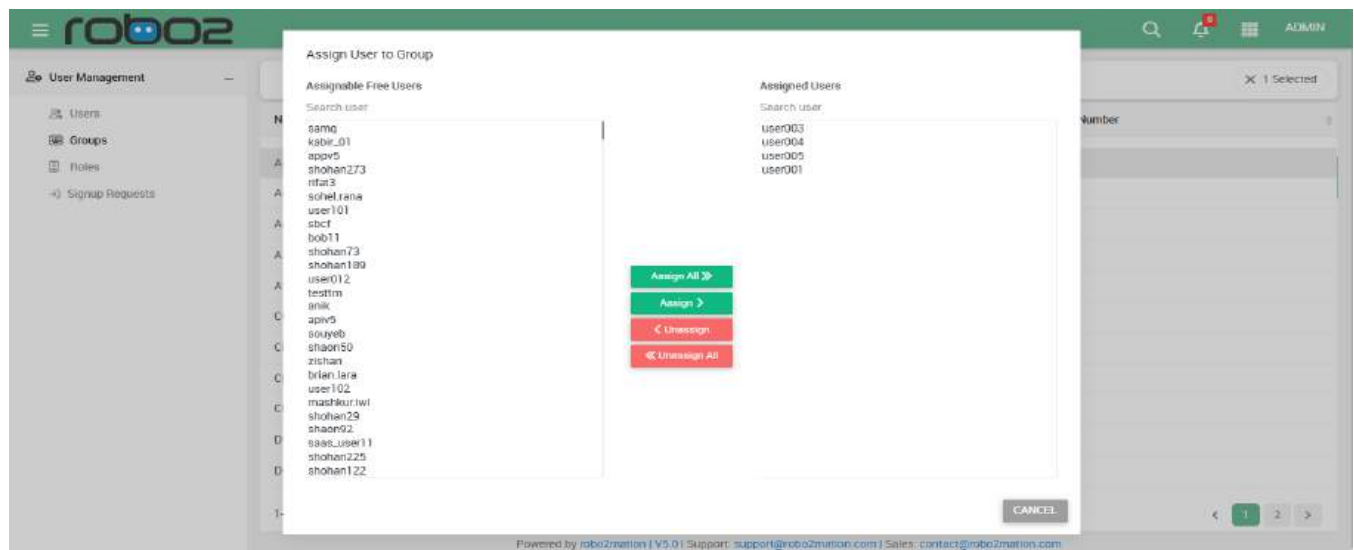

Figure 23: Assign User to group

- Navigate to the **Menu → User Management → Groups**.
- To assign users in any group, select a group.
- Click on the “Assign User” option to select users to assign.
- A “assign users to group” window will pop up.
- Select or search user to assign one or multiple users and click on the “Assign” button.
- The assigned users will be shown on the right side.

Edit Group

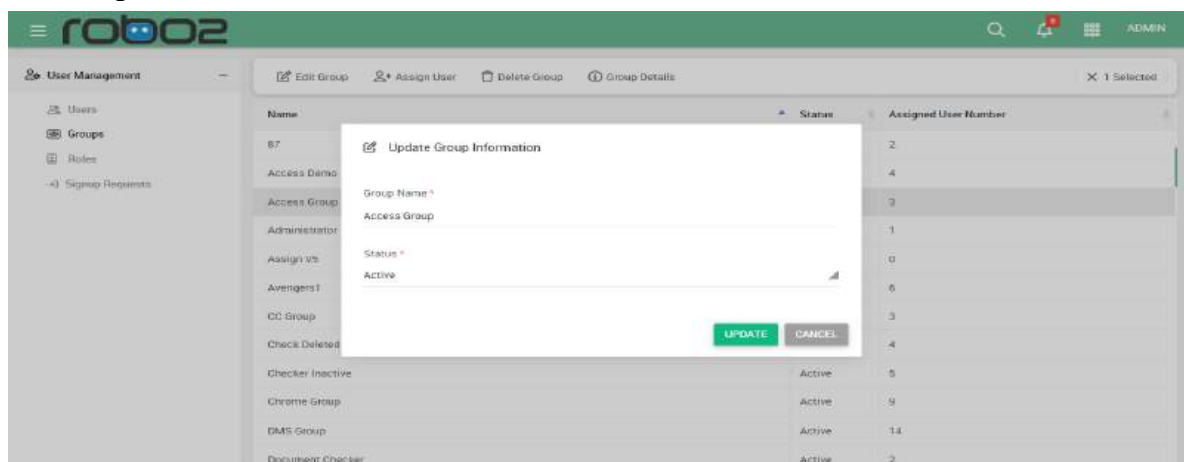

Figure 24: Edit Group

Admin or user with “Manage Group” permission can edit a group by following steps:

- Navigate to the **Menu → User Management → Groups**.
- To edit a group, First select a group to edit by simply clicking on the group name.
- Click on the edit icon (pen icon) to preview group information.
- Edit the fields as necessary and click on the “update” button.
- Group information will be updated.

Delete Group

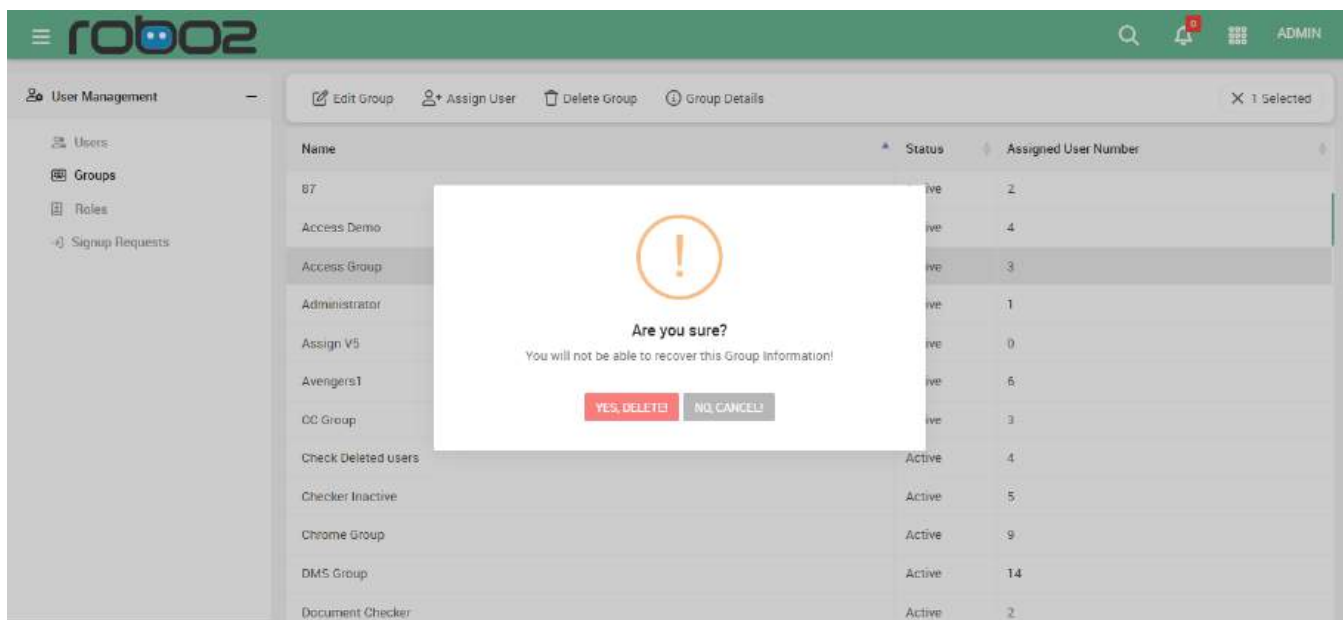

Figure 25: Delete group

Admin or manage user group can edit a group by following steps:

- Navigate to the **Menu → User Management → Groups**.
- Select a group and click on the “delete” icon.
- A pop-up window will open with the “Yes, Delete” and “No, Cancel” button.
- Click on “Yes, Delete” to delete the group.

Search Groups from Group List

- Navigate to the **Menu → User Management → Groups**.
- Click on the search bar.
- Matched results will appear upon group name search.

Column Toggle & Download

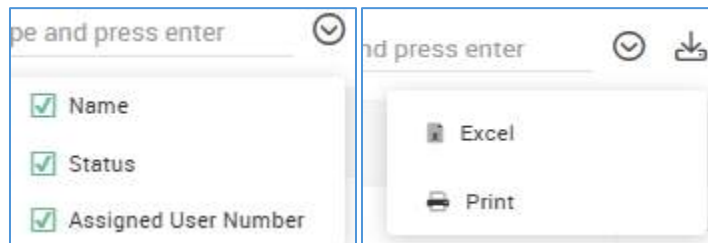

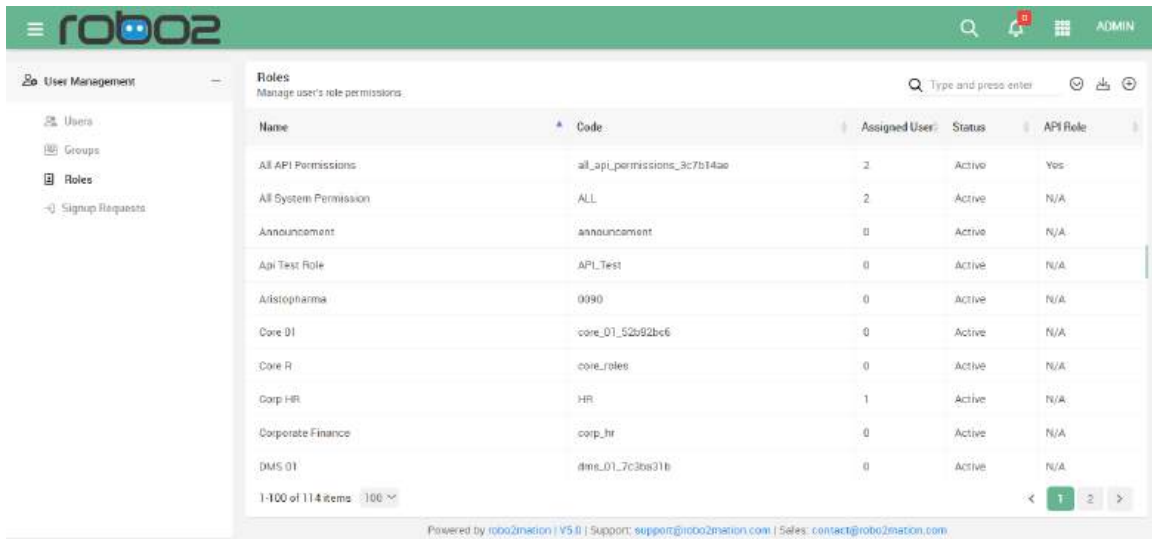

Figure 26: Column toggle & Download

- With the toggle option user can customize the data table columns.
- Only selected columns in toggle option will be displayed in the data table.
- With the Download icon, the data table information will be downloaded in excel format.

Roles

Roles in the DMS allow administrators to define user permissions and access levels. By creating roles with specific permissions (e.g., view, upload, edit, delete), administrators can control the actions users can perform within the system. This ensures secure and efficient document management by granting access based on user responsibilities.

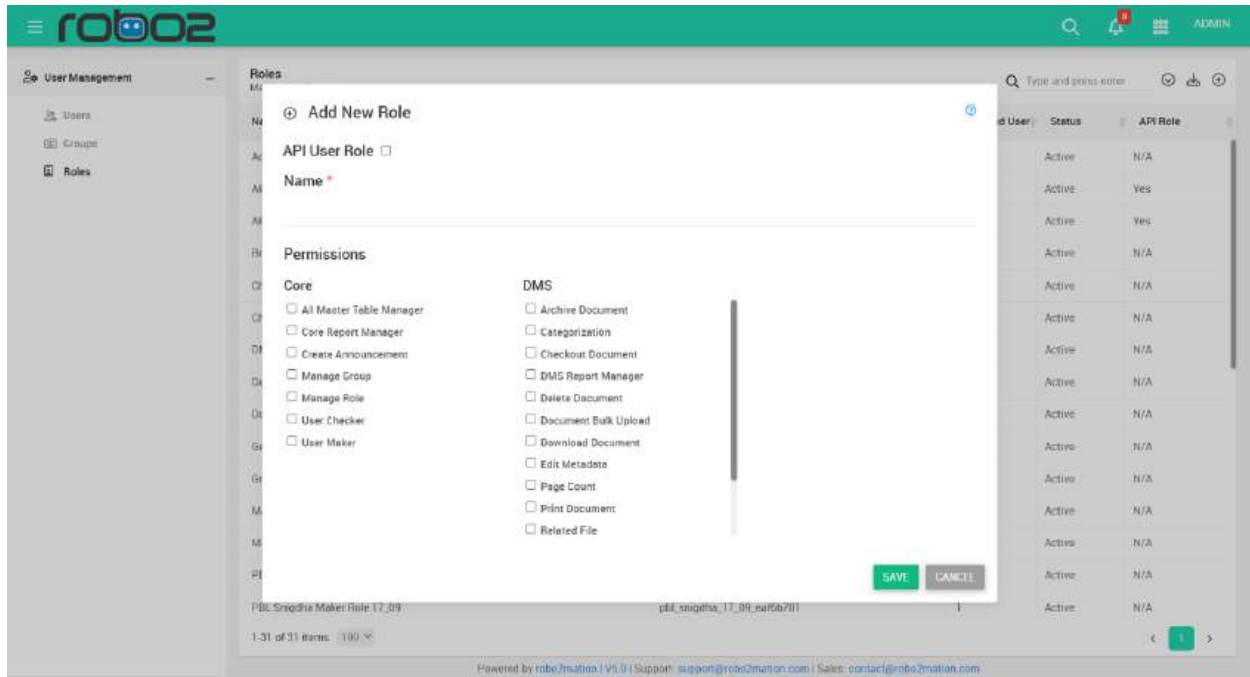

The screenshot shows the 'Roles' management page in the Robo2 system. The page has a sidebar with 'User Management' and 'Roles' options. The main area displays a table of roles with columns: Name, Code, Assigned User, Status, and API Role. The table lists various roles like 'All API Permissions', 'All System Permission', 'Announcement', 'API Test Role', 'Autopharma', 'Core D1', 'Core R', 'Corp HR', 'Corporate Finance', and 'DMS D1'. At the bottom, it indicates '1-100 of 114 items' and '100' items per page.

Name	Code	Assigned User	Status	API Role
All API Permissions	all_api_permissions_3c7b14ae	2	Active	Yes
All System Permission	ALL	2	Active	N/A
Announcement	announcement	0	Active	N/A
API Test Role	API_Test	0	Active	N/A
Autopharma	0090	0	Active	N/A
Core D1	core_D1_52b92bc6	0	Active	N/A
Core R	core_roles	0	Active	N/A
Corp HR	HR	1	Active	N/A
Corporate Finance	corp_hr	0	Active	N/A
DMS D1	dms_D1_7c3ba31b	0	Active	N/A

Figure 27: Roles

Add Roles

The screenshot shows the 'Add New Role' form in the Robo2 system. The form has a sidebar with 'User Management' and 'Roles' options. The main area displays a form with fields for 'Name' and 'Permissions'. The 'Permissions' section is divided into 'Core' and 'DMS' categories, each with a list of checkboxes for various permissions. At the bottom, there are 'SAVE' and 'CANCEL' buttons. The form also shows a list of roles on the right side.

Figure 28: Add Roles

Admin or user with “Manage Role” permission can add roles by following steps:

- Navigate to the **Menu → User Management → Roles**.
- From the Roles menu click on the “+” icon to add new roles.
- All permission lists will appear with a role name field.
- To Create API role, check on “API User Role”
- Enter a role name.
- From the permissions list (checkbox menu), select expected action permission and click on save.

Role Permissions

Figure 29: Core, DMS & API Permissions

A Description of DMS system permissions, API user permissions and Core permissions is given below:

SL No.	DMS Permission	Description
1	Archive Document	Allows archiving documents that are no longer in active use but need to be retained for reference.
2	Categorization	Provides users the Categorization panel and users get access for CRUD operation on Document Type, Category & Metadata.
3	Checkout Document	Provides access to checkout a document (document will no longer be accessible by anyone but will stay on the system in Check Out Document page).
4	DMS Report Manager	Allows users to get access to all DMS reports across all users.
5	Delete Document	Allow users to delete documents from the system.
6	Document Bulk Upload	Grants permission to upload multiple documents at once.
7	Download Document	Enables downloading documents from the system.
8	Edit Metadata	Grants users to update metadata information.
9	Page Count	Allows access of the total number of pages of pdf documents in each document type of the system.
10	Print Document	Allows users to print documents from browser view.
11	Settings - Document Share	Allow users to manage document sharing settings.
12	Upload Document	Grants permission to upload new documents to the system in accessed document types.
13	Version Control	Grants to upload version documents of any existing document.
14	Related File	Grants to link related files to a document, providing context or additional resources.

SL No.	Core Permissions	Description
1	All Master Table Manager	This is a permission to manage master table & all its CRUD operations.
2	Core Report Manager	Provides all users' core (User Management & API users') report log.
3	Create Announcement	Provides users with access to create announcements.
4	Manage Group	User with "Manage Groups" permission can perform full CRUD (Create, Read, Update, Delete) operations on groups.
5	Manage Role	User with "Manage Role" permission can perform full CRUD (Create, Read, Update, Delete) operations on roles.
6	User Checker	If a user is assigned the User Checker role, they can review requests submitted by Maker users. The Checker can either approve or reject a request.
7	User Maker	If a user is assigned to the User Maker role, they can send user create or update request.

SL No.	API Permissions	Description
1	Authentication	This endpoint allows users to obtain a token by providing their username and password for authentication.
2	Check Checker Status	This endpoint makes an HTTP GET request to check if checker feature is enabled for selected document type.
3	Document Bulk Update	This endpoint is used to update document metadata information in bulk.
4	Document Download	This endpoint is used to download a document in base64 format by providing the document ID.
5	Document Search	This endpoint allows users to search for documents based on specific keywords and search types.
6	Document upload	This endpoint makes an HTTP POST request to upload documents to the system
7	Get Permitted Document Type	This endpoint makes an HTTP GET request to retrieve all permitted list of document types for categorization of the authenticated user.
8	Metadata	This endpoint makes an HTTP GET request to retrieve all metadata of selected document type.
9	Users of Checker Group	This endpoint makes an HTTP GET request to retrieve user information from checker groups for a given document type ID.
10	Document Version Upload	Users can upload documents, and each upload will automatically be assigned a version number to track changes.
11	Master Table Add Record	This is an API permission to add record on specific master table.
12	Master Table Update Record	This is an API permission to update record on specific master table.

Assign Users to Role

 Edit Role	 Assign User	 Delete Role	 Role Details	 1 Selected
Name	Code	Assigned User	Status	API Role
Corp HR	HR	1	Active	N/A
Corporate Finance	corp_hr	0	Active	N/A

Figure 30: Options on selection

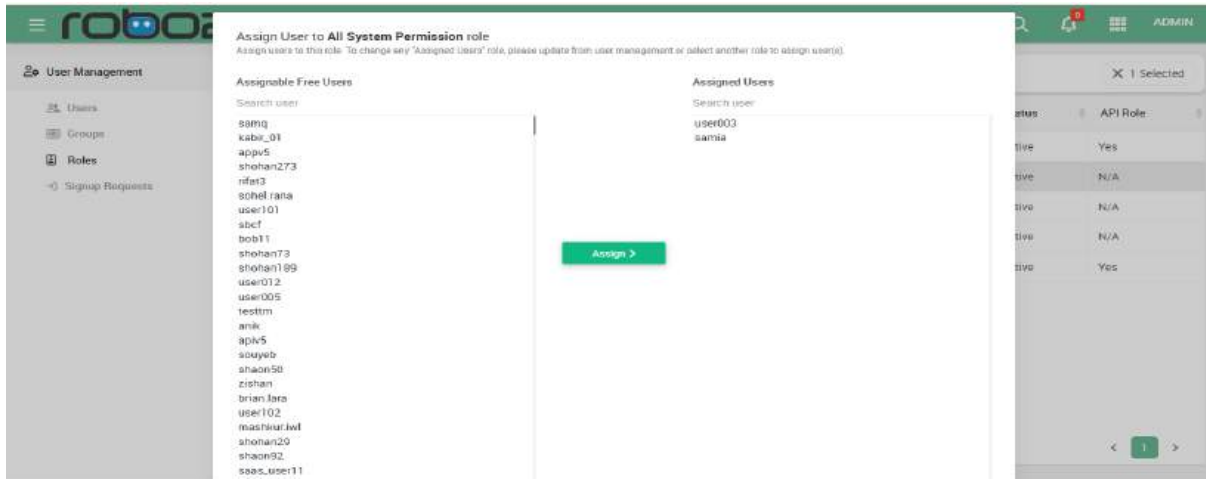

Figure 31: Assign Users to Role

Admin or user with “Manage Role” permission can add roles by following steps:

- Navigate to the **Menu → User Management → Roles**.
- To assign users in any role, select a role.
- Click on the “Assign User” option to select users to assign.
- A “assign users to group” window will pop up.
- Select or search user to assign one or multiple users and click on the “Assign” button.
- The assigned users will be shown on the right side.

Edit Role

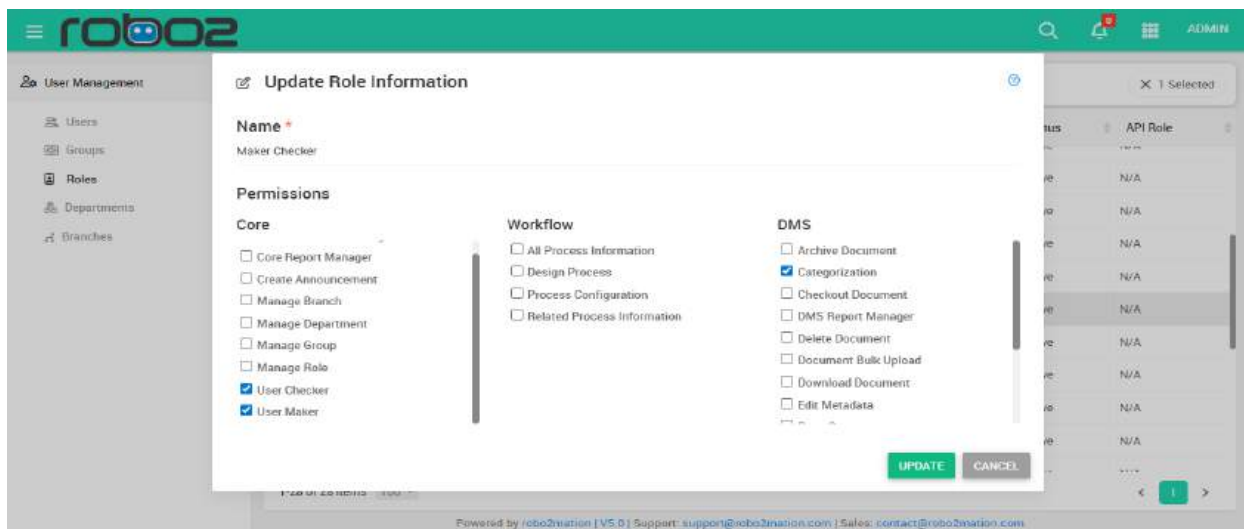

Figure 32: Edit Role

Admin or user with “Manage Role” permission can edit roles by following steps:

- Navigate to the **Menu → User Management → Roles**.
- To edit a role, First select the role to edit by simply clicking on the role name.
- Click on the edit icon (pen icon) to preview group information.
- Edit the fields as necessary and click on the “update” button.
- Roles will be updated, and the page will refresh.

Delete Role

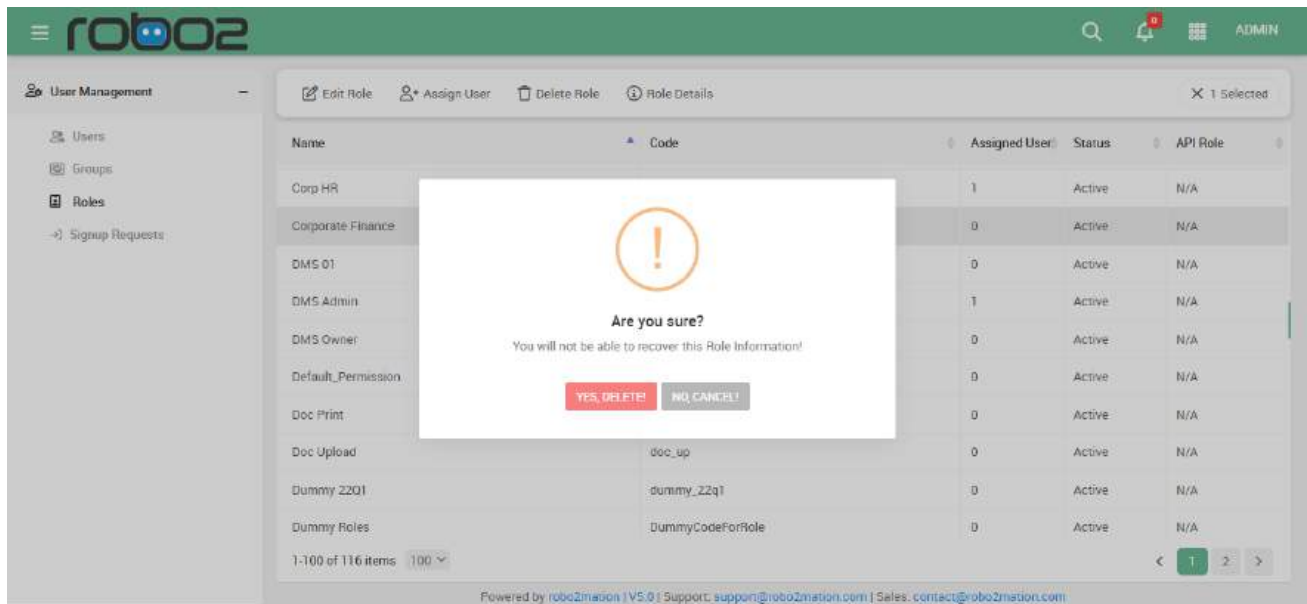

Figure 33: Delete Role

Admin or user with “Manage Role” permission can delete roles by following steps:

- Navigate to the **Menu → User Management → Roles**.
- To delete a role, select role and click on the “delete” icon.
- A pop-up window will open with the “Yes, Delete” and “No, Cancel” button.
- Click on “Yes, Delete” icon to delete the role.

Column Toggle & Download

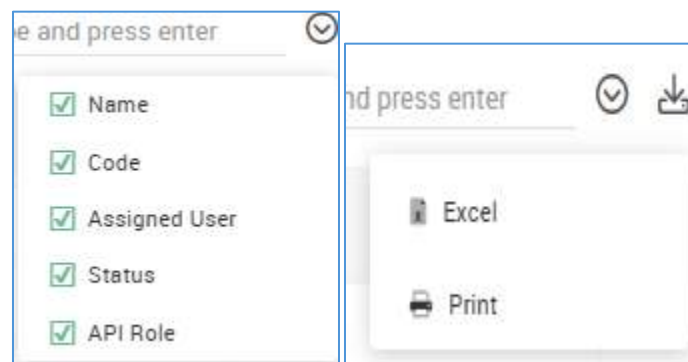

Figure 34: Column toggle & Download

- With the toggle option user can customize the data table columns.
- Only selected columns in toggle option will be displayed in the data table.
- With the Download icon, the data table information will be downloaded in excel format.

Document

Organizations working with DMS can attach, upload and organize their documents with the document panel options.

Attach Document

The **Attach Document Section** allows files in selected formats up to 20MB each (PDF, PNG, JPG, JPEG, SVG, GIF, MP3, MP4, DOC, DOCX, XLS, XLSX, CSV, PPT, PPTX, MSG, EML, TXT) to be seamlessly attached and prepared for uploading. It supports drag-and-drop functionality and file browsing ensuring smooth integration of documents into the system for efficient management and accessibility.

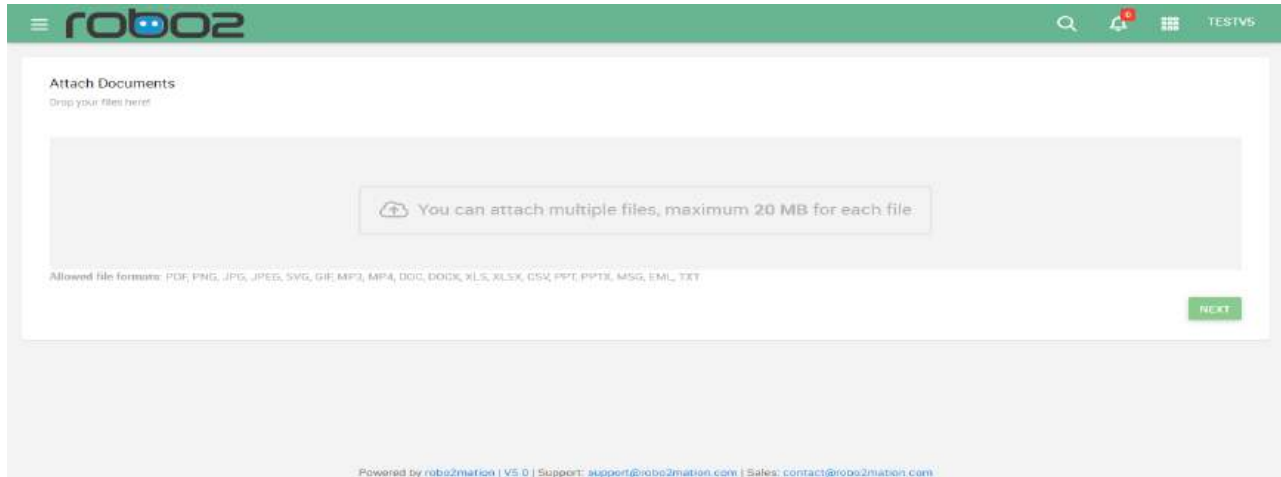

Figure 35: Attach Document

Documents can be attached from Dashboard “Attach Document” option, or from the Document Option by following below steps:

- Navigate to **Dashboard**
- Click on Attach Document option or drag and drop files

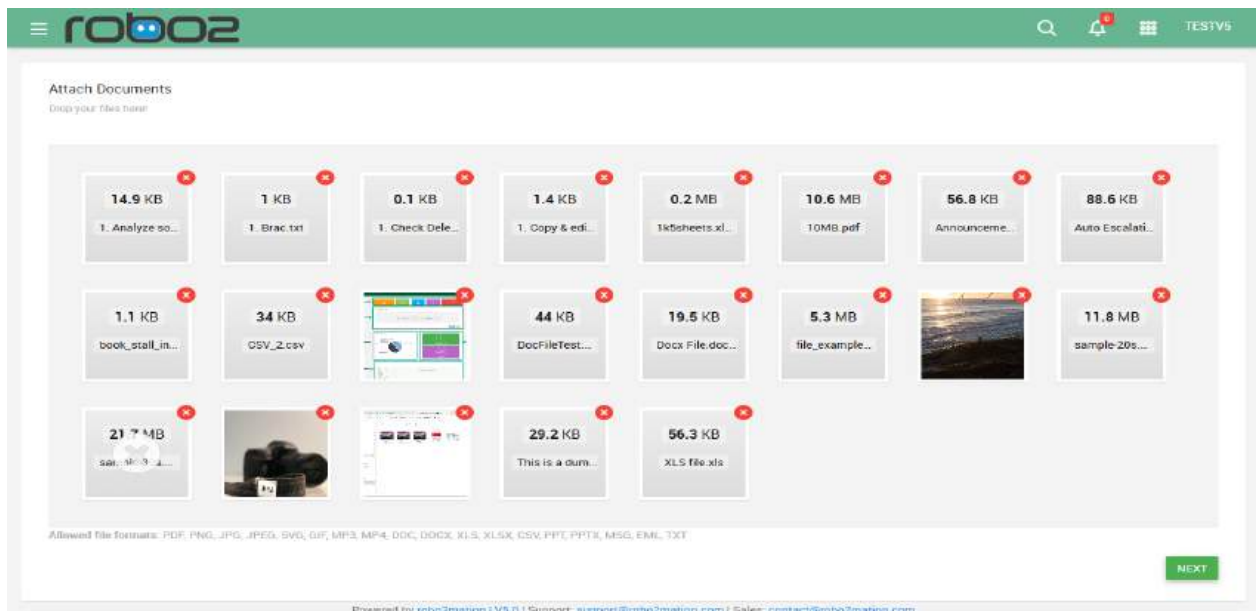

Figure 36: Attach Document List

- Navigate to Dashboard
- Navigate to **Menu** → **Document**→ **Attach Documents**.
- Click on the Attach Document option or drag and drop files.
- The attached file can be removed by clicking on the cross (x) icon.
- Attached file size and filename will be displayed, on hover full filename and file type extension will be visible.
- Once attached, files can be viewed on pending documents.

Upload Documents

The **Upload Document Section** is a feature designed to allow users to **upload files** into the system. It provides a structured process where users can select files, add relevant **metadata** (such as tags, descriptions, or categories), and finalize the upload. This ensures that documents are properly organized, searchable, and easily accessible for future use.

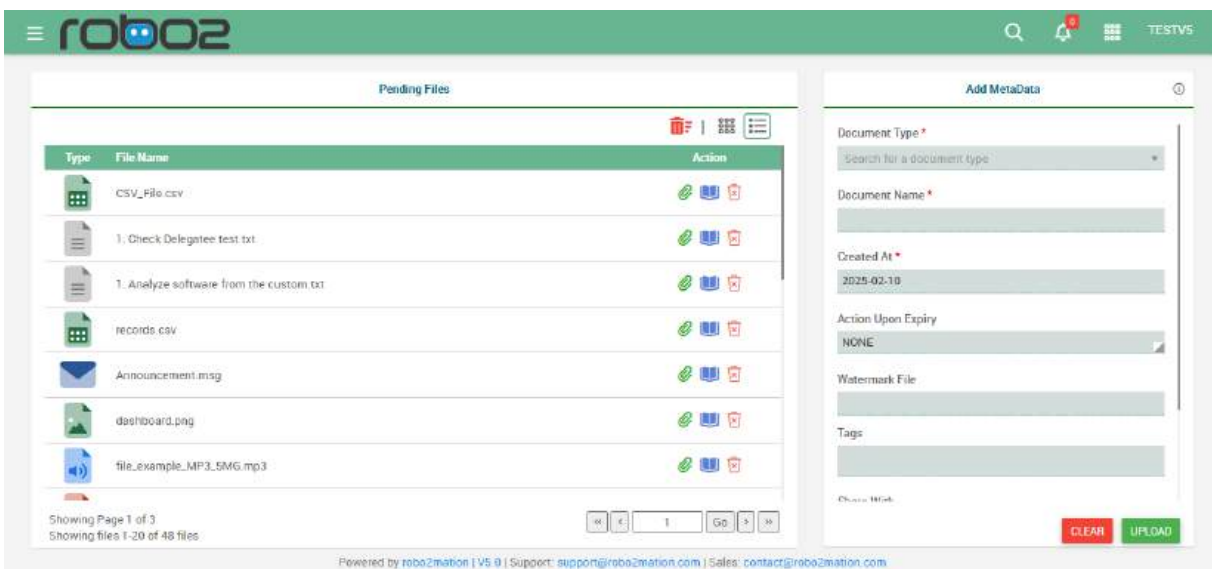

Figure 37: Pending Documents to Upload

How to upload a document?

- Navigate to **Menu** → **Document**→ **Pending Documents**.
- Click on the preview (📖) icon to preview file from pending document.
- Select a document by clicking on the document icon or the attach icon.
- To preview selected file, click on the filename for preview.
- To remove the selected file, click on the cross (x) icon and the file will be restored in the pending document list.
- After selecting the file, the user must fill up the “Add Metadata” section fields.
- Add Metadata field includes,
 - Document Type (This refers to already created document type, after selecting a document type the metadata fields will appear for that document type)
 - Document name (user can set any name to the document as per requirements)
 - Expiry date (User can set an expiry date to the document)
 - Watermark file (user can set a watermark to the uploaded pdf file)
 - Tags (user can use any tags to the document if needed)
 - Share Documents (within permission user can share the documents)

- Get shareable link (user can get a shareable link for uploaded document to access the document with the link)
- Click on “Upload” button after filling the necessary fields of “Add Metadata” section.

Watermark Files

In the **Document Management System (DMS)**, watermarking is exclusively supported for **PDF files**. This feature allows users to overlay text, logos, or patterns onto PDF documents, ensuring content protection, ownership indication, and enhanced document security.

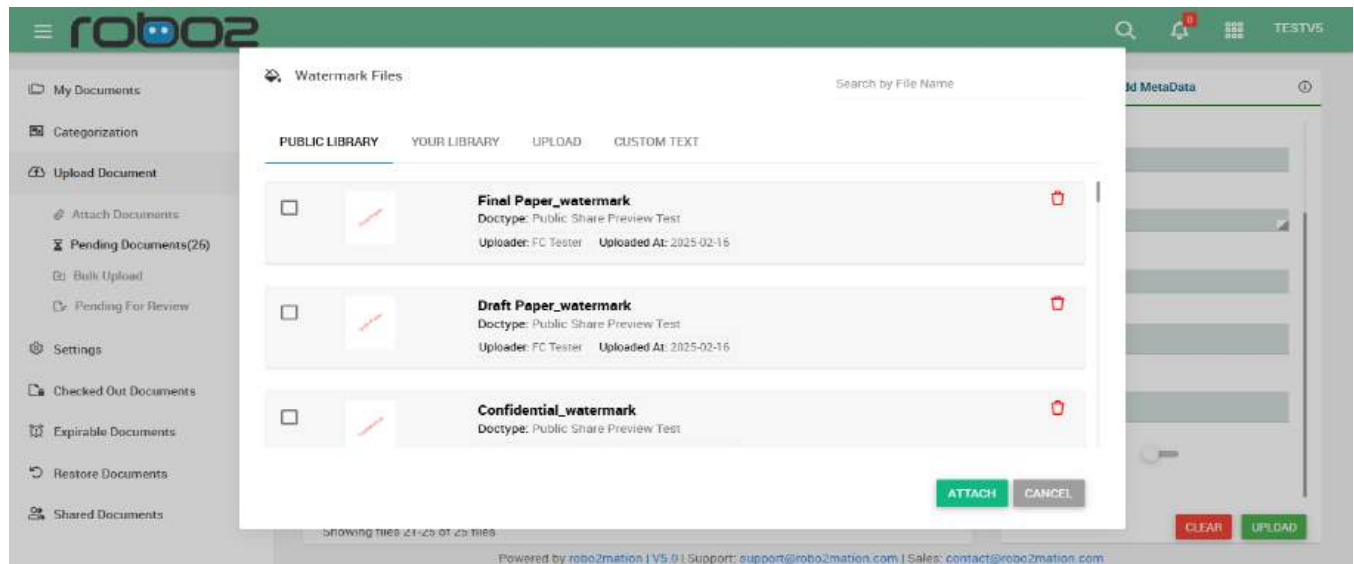

Figure 38: Watermark File

To create a watermark file, follow the given steps:

- Upload a pdf document and select document type and set a document name.
- Click on the watermark file.
- User can select watermark file from public library or your library option, or can upload file or use custom text
- To upload a watermark file, simply click on upload and upload the file (only pdf and image is allowed)
- Users can also use custom text for watermark, enter any custom text and click on create.

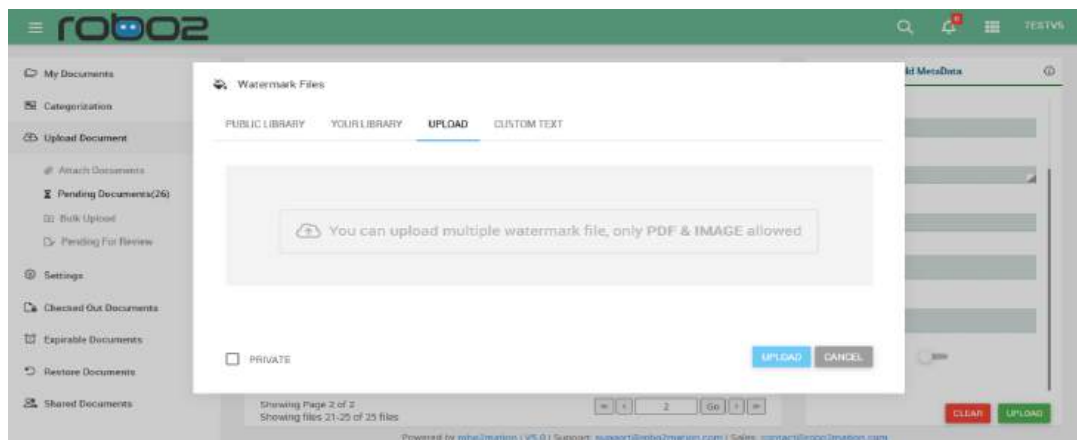

Figure 39: Create Watermark File

Document Maker-Checker

This feature allows a user to review a document that is to be uploaded. The uploaded document by any maker goes in “pending for review” of the checker page. Once approved the document will be accessible to the permitted users. If rejected the document will not be accessible to any user.

Review Requests (Maker)

The Maker is responsible for uploading documents into the system and assigning them to a designated Checker for review. The Maker initiates the process by selecting the file and specifying the appropriate Checker. Once submitted, the Maker cannot access the file until it is approved by the Checker, ensuring a controlled and secure workflow.

Powered by robot2motion (V5.0) Support: support@robot2motion.com | Sales: contact@robot2motion.com

Figure 41: Maker’s Pending for Review

By following below steps user can access the checker reviewed files,

- Navigate to **Menu → Document → Pending for Review**.
- Filter with **“Requested by Me”** (Displays the file that is uploaded for a checker review)
- With the Status filter, the pending, rejected & approved files will be displayed.
- Users can have a view of the file by clicking on the filename.
- With DocType, Checker filter, Upload Date Range, Review Date Range, specific file information can be retrieved.

Review Requests (Checker)

The Checker reviews documents submitted by the Maker. They have the authority to approve, reject, or mark the file as pending. If approved, the file becomes accessible to the Maker and other users. If rejected or left pending, the file remains locked and inaccessible, maintaining document integrity and ensuring only verified content is available for use.

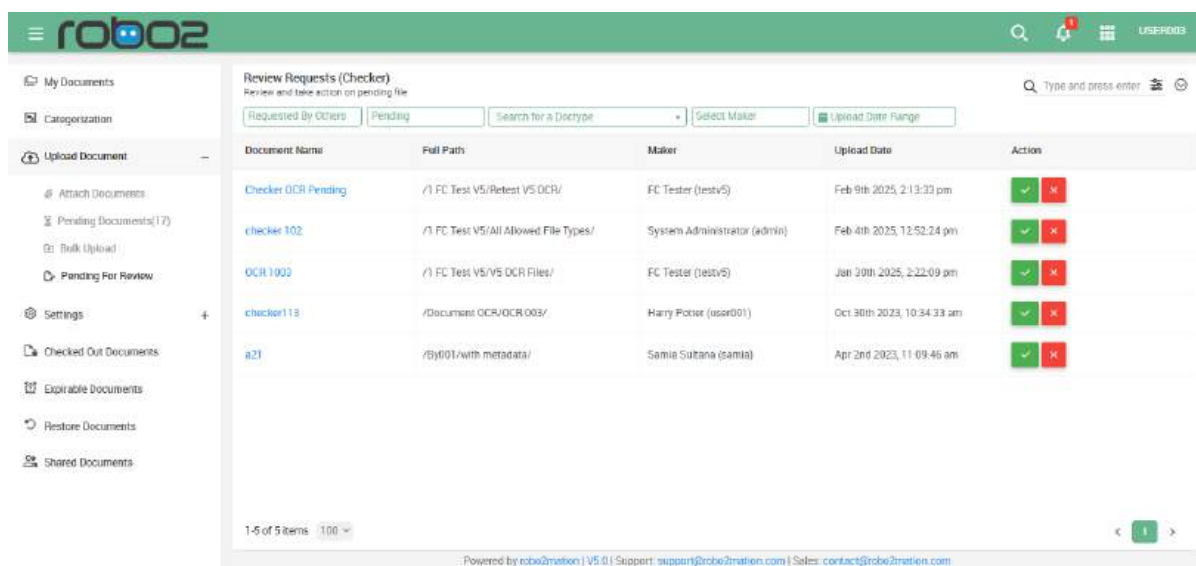

Figure 42: Checker's Pending for Review

- When a document is sent for review, it goes to the selected checker and the checker gets a system notification.
- Clicking on the notification redirects user to the document with approve/reject option.
- Clicking on approve icon, system gives a notification “Document Approved Successfully” and the document is accessible to permitted users.
- Clicking on the reject icon, system gives a notification “Document Rejected Successfully”.
- Checker Can also review and approve/reject the document from “Review Request (checker)” page.
- User can see their document review requests filtering by “Approved”, “Rejected”, “Pending”.
- With DocType, Checker filter, Upload Date Range, Review Date Range, specific file information can be retrieved.

Bulk Upload

The Bulk Document Upload feature allows users to upload multiple files simultaneously, streamlining the process of adding large volumes of documents to the system. Users can select multiple files from their device, and the system processes them in one go, saving time and effort. It is ideal for handling large-scale document uploads while maintaining organization and consistency.

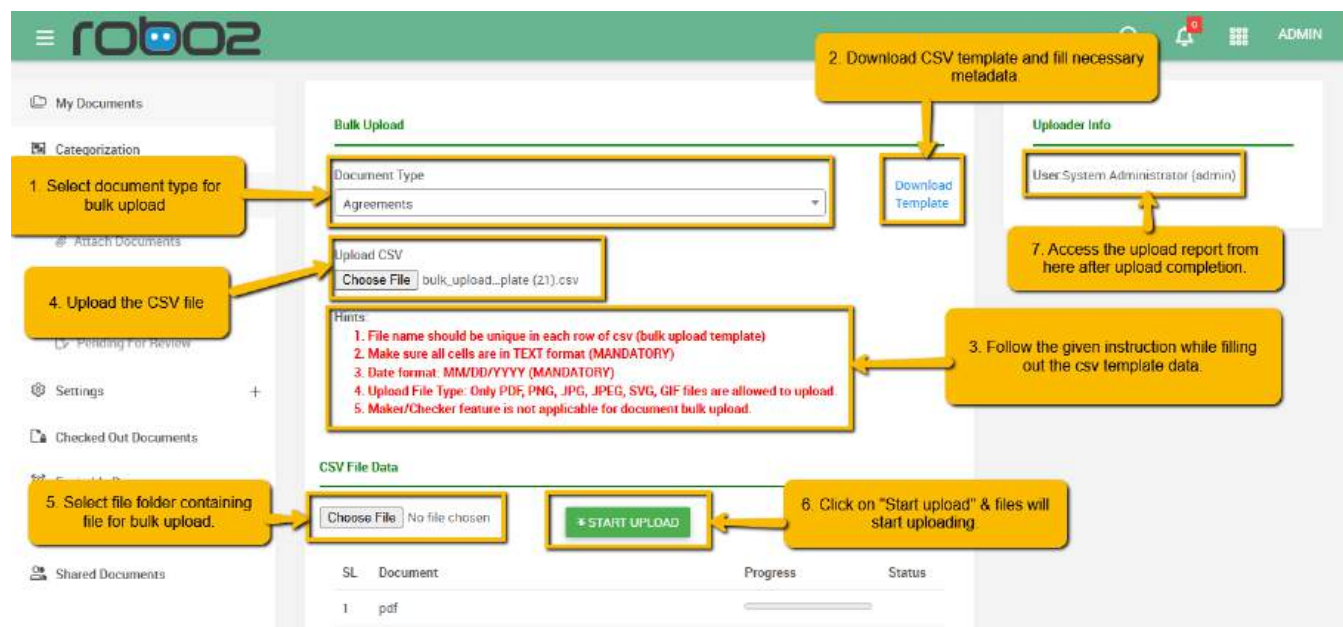

Figure 43: Document Bulk Upload

Admin or authorized user can perform bulk file upload by following the below steps,

- Navigate to **Menu → Document → Bulk Upload**.
- First choose a document type
- A CSV template for the document type will be available to download
- Fill the csv file fields according to the metadata while ensuring
 - o File name should be unique in each row of csv (bulk upload template)
 - o Make sure all cells are in TEXT format (MANDATORY)*
 - o Date format: MM/DD/YYYY (MANDATORY)*
 - o Upload File Type: Only PDF, PNG, JPG, JPEG files are allowed to upload.
- If the csv file is correct, it will accept the file otherwise it will give an error message with necessary corrections.
- Click on choose file to upload the desired pdf file (pdf file should be in the folder and folder should be uploaded).
- Click on start upload and the file will be uploaded.
- User can see the file from “My Documents”/search field (within permission).
- Users can upload pdf, png, jpg, jpeg files in bulk up to 10000 files without any conflicts or interruptions.

Bulk File Download

The **Bulk File Download** feature allows users to download **multiple files simultaneously**, often compressed into a ZIP file, for quick and efficient retrieval of large document sets.

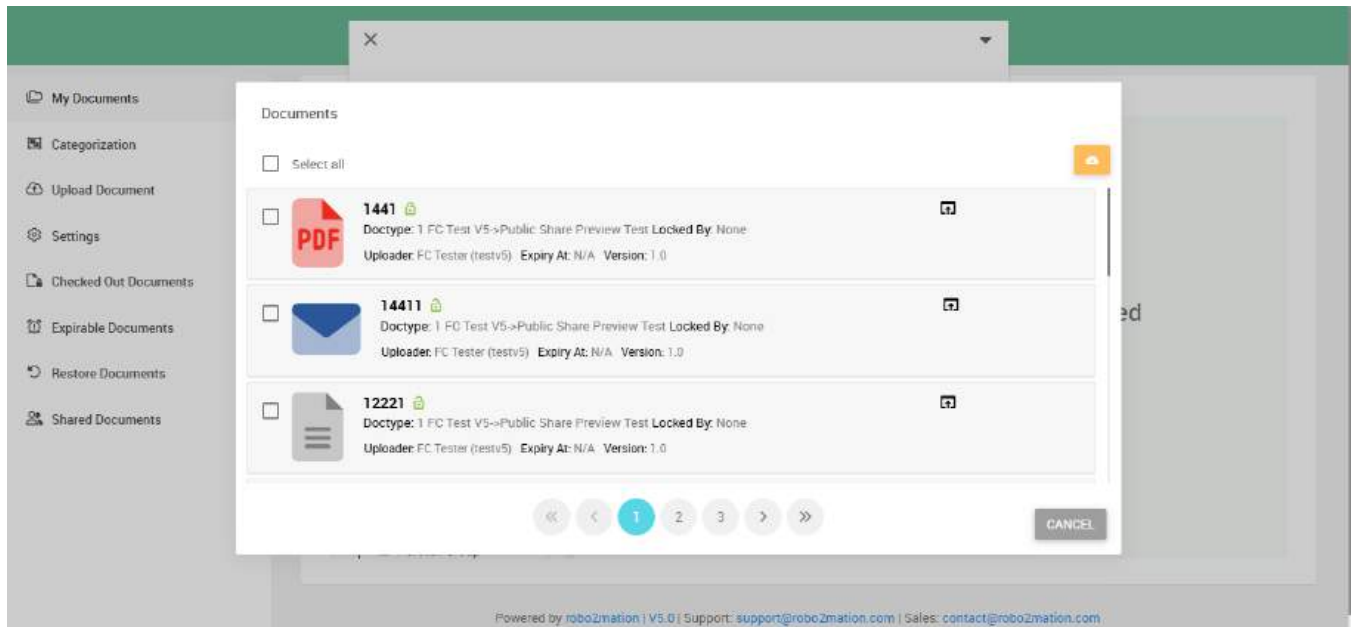

Figure 44: Document Bulk Download

User can download multiple files together by following the below steps,

- Navigate to Dashboard or any other DMS page.
- Click on the search icon on navbar.
- Users can download multiple files with global search results or from advanced search.
- Click on the down arrow for “advanced Search” panel.
- Click on docType and select a docType and click on search.
- From the Search results, select files to download in bulk or select all files to download.
- Once download is completed, the download link will be accessible from “Requested Download” page.
- A notification will arrive upon download link generation completion and notification link will redirect user to the relevant page for downloading the file.

Settings: Document Sharing Configuration

The Share Documents option in the settings allows users to configure and manage document-sharing permissions for system users. It provides control over who can share documents internally, externally and via mail.

Users can follow the below steps to configure the document sharing,

- Navigate to **Menu → Document → Settings → Document Sharing Configuration**.
- Enable Allow share Document.
- To give internal share access, you need to enable “Internal Share”. Can give this privilege to individual users, groups or all users.
- To give external share access, you need to enable “External Share”. Can give this privilege to individual users, groups or all users.

- To provide “Share Through Email” you need to enable this. Can give this privilege to individual users, groups or all users.
- Click on “Save Changes” to save.

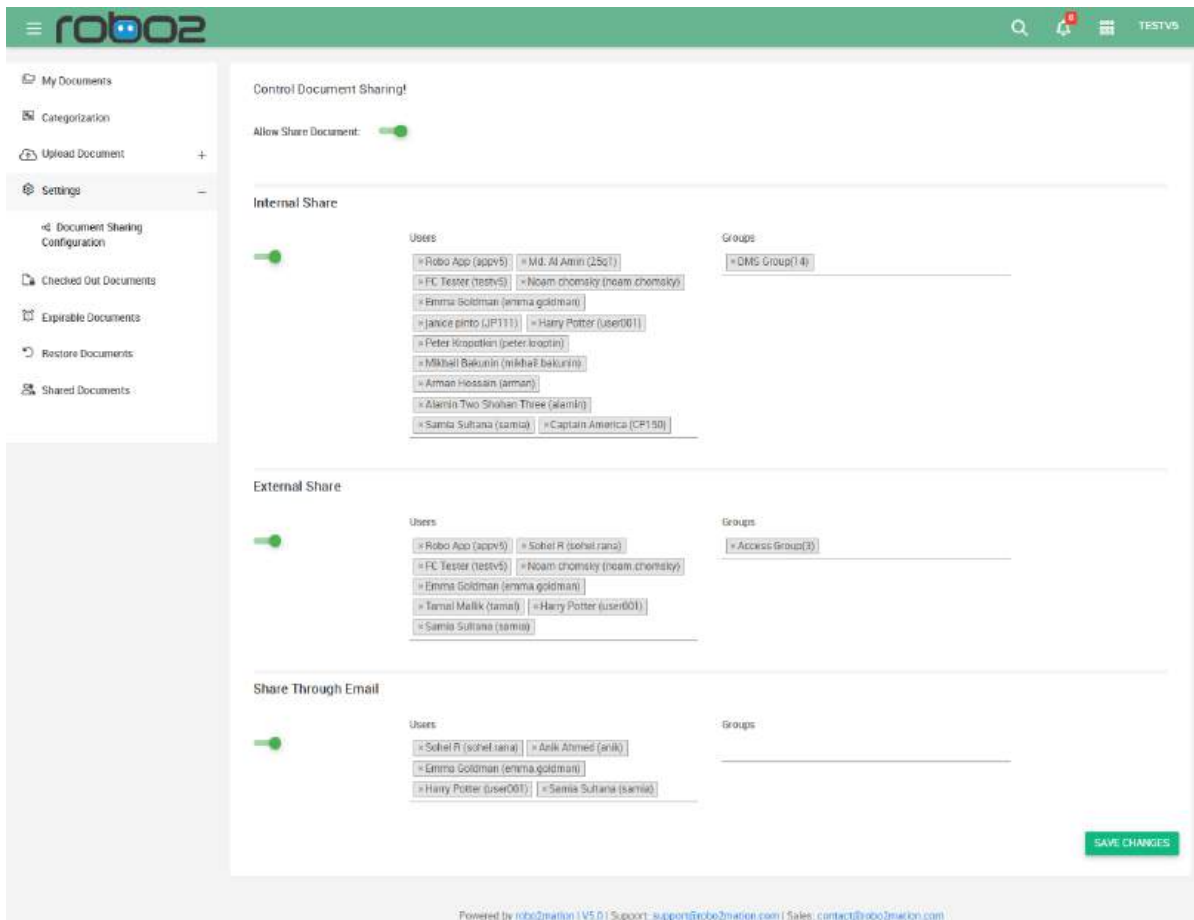

Figure 45: Document Sharing Configuration

Document Internal Share: This feature allows users to securely share documents with other users within the system, facilitating collaboration while maintaining control over access and permissions. It ensures that sensitive information remains within the organization and enables efficient teamwork through real-time access and version control.

Document External Share: With the "Public" share option allows users to share documents both within the system and externally by generating a shareable link. This link can be accessed by anyone, enabling them to view and download the document, making it convenient for sharing information with users outside the organization while maintaining controlled access within the system.

Document Share Via Email: This feature allows users to share documents, including their versions, directly from the Document Management System (DMS). It enables users to send documents as email attachments.

Share Document: From Upload Document

Users can share documents during uploading a document as well as when he/she views the documents if he/she has the shared document permission.

- Navigate to **Menu → Document → Pending Documents.**

- To share a document during document upload, click on share document drop-down.
- Then you need to select individual users, groups or all users from the list.
- Click on “Upload” button to share the document.

Share Document: From Document View

A dialog box titled "Share Document(s)" with a "Shared URL" input field. Below the input field is a "Get Shareable Link:" label with a toggle switch. At the bottom are three buttons: "DELETE" (red), "SHARE" (blue), and "EMAIL" (teal).

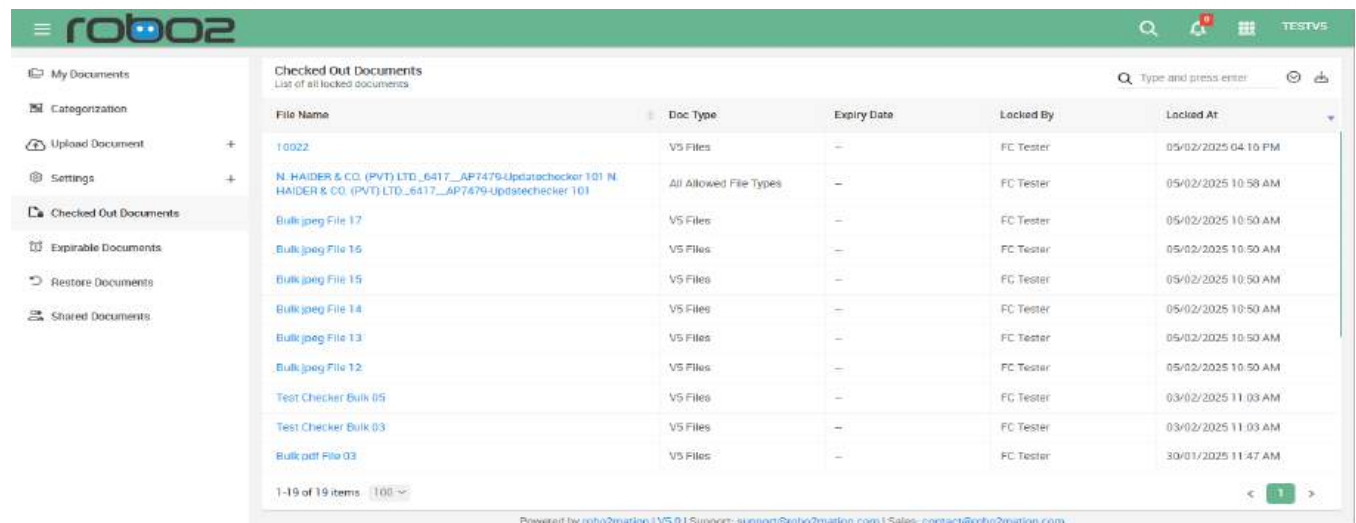

Figure 46: Share Document from Document View

A document can be shared from the document full view page with below steps,

- Navigate to a document view page.
- Then you need to click on “Share Document(s)” option.
- Select individual users, groups or all users from the list.
- Click on “Share” button to share the documents with the selected users
- Click on “Email” option to share the document via email.

Checked Out Documents

Checked Out Documents are documents that have been temporarily locked by a user when it's no longer in use. When a document is checked out, it becomes unavailable for editing by other users, ensuring that no conflicting changes are made. During this period, other users can typically view the document in a read-only mode but cannot make any modifications until it is checked back in.

The screenshot shows the Robo2mation web interface. The left sidebar contains navigation options: My Documents, Categorization, Upload Document, Settings, Checked Out Documents (selected), Expirable Documents, Restore Documents, and Shared Documents. The main content area is titled "Checked Out Documents" and displays a table of locked documents.

At the bottom of the table, it says "1-19 of 19 items" and "100". The footer of the interface includes the text: "Powered by robo2mation | V5.0 | Support: support@robo2mation.com | Sales: contact@robo2mation.com".

Figure 47: Checked Out Documents

Access Checked Out Documents by following the below steps,

- Navigate to **Menu → Document → Checked Out Document**
- To view the checked-out document, click on the document name.

Search, Column Toggle & Download

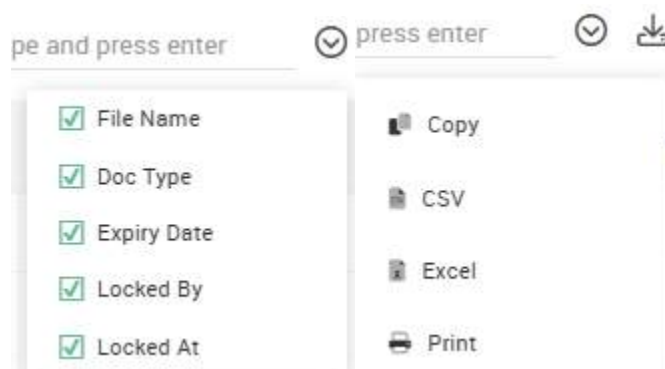

Figure 48: Column toggle and Download

- Specific documents can be searched with the search bar using document name or doctype.
- With the toggle option user can customize the data table columns.
- Only selected columns in toggle option will be displayed in the data table.
- Click on the Download icon to “Copy”, “Print” or to download data in “CSV” & “Excel” format.

Expirable Documents

Expirable Documents are documents that have a set expiration date, after which they become inactive, automatically deleted or archived based on the document’s configuration. This feature helps organizations manage document lifecycle and compliance by ensuring that outdated or time-sensitive information is no longer accessible once its validity period ends. Documents scheduled to expire within the next 30 days will be displayed here.

File Name	Version	Doc. Type	Expiry Date
Annual_Financial_Report	1	All Allowed File Types	10/02/2025
Client_Proposal_ABC_Corporation	1	All Allowed File Types	10/02/2025
Compliance_Certificate_JSO	1	All Allowed File Types	12/02/2025
Compliance_Certificate_JSO	1	All Allowed File Types	10/02/2025
Employee_Handbook	1	All Allowed File Types	10/02/2025
Invoice_ClientName	1	All Allowed File Types	10/02/2025
Leave_Request_Form	1	All Allowed File Types	10/02/2025
Marketing_Brochure_ServicesOverview	1	All Allowed File Types	10/02/2025
Meeting_Minutes_TeamSync	1	All Allowed File Types	10/02/2025
Performance_Review_Template	1	All Allowed File Types	10/02/2025

Figure 49: Expirable Documents

Access Checked Out Documents by following the below steps,

- Navigate to **Menu → Document → Expirable Documents**.
- Documents that are to be expired in next 30 days will appear here.
- To view the document, click on the document name.

Search, Column Toggle & Download

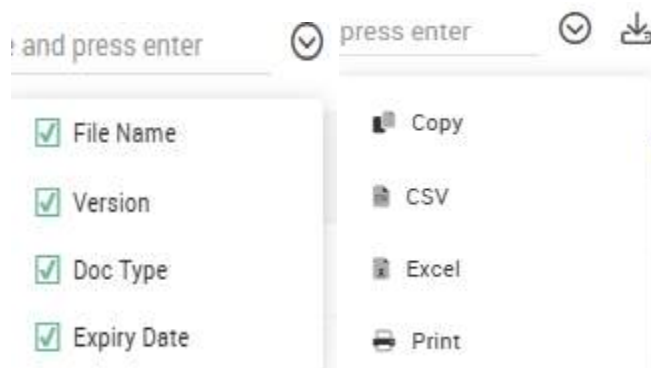

Figure 50: Column toggle and Download

- Specific documents can be searched with the search bar using document name or doctype.
- With the toggle option user can customize the data table columns.
- Only selected columns in toggle option will be displayed in the data table.
- Click on the Download icon to “Copy”, “Print” or to download data in “CSV” & “Excel” format.

Restore Documents

Restore Documents is a feature that allows users to recover documents that were previously deleted. This functionality ensures that important information can be retrieved if needed, maintaining data continuity and minimizing the risk of accidental loss. Restored documents are reinstated to their original location with their content and version history intact, enabling users to continue working without disruption.

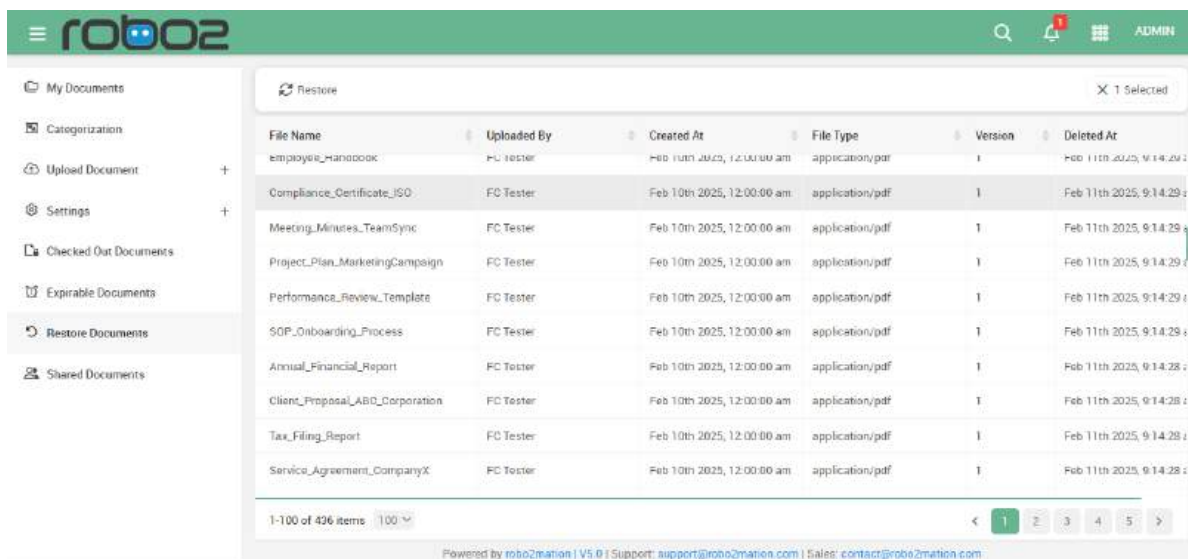

Figure 51: Restore Documents

Access Restored Documents by following the below steps,

- Navigate to **Menu → Document → Restore Documents.**
- Documents that were deleted will appear here.
- To view the document, click on the document name.
- To restore a document, click on the document.
- Click on “Restore” option to restore the document.

Search, Column Toggle

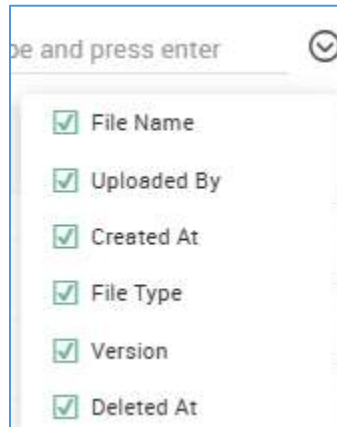

Figure 52: Column toggles

- Specific documents can be searched with the search bar using document name or doctype.
- With the toggle option user can customize the data table columns.
- Only selected columns in toggle option will be displayed in the data table.

Shared Documents

Shared Documents are files that have been made accessible to multiple users, either within the system or externally, depending on the sharing settings. These documents can be shared with specific individuals, groups, or publicly, allowing access to the document.

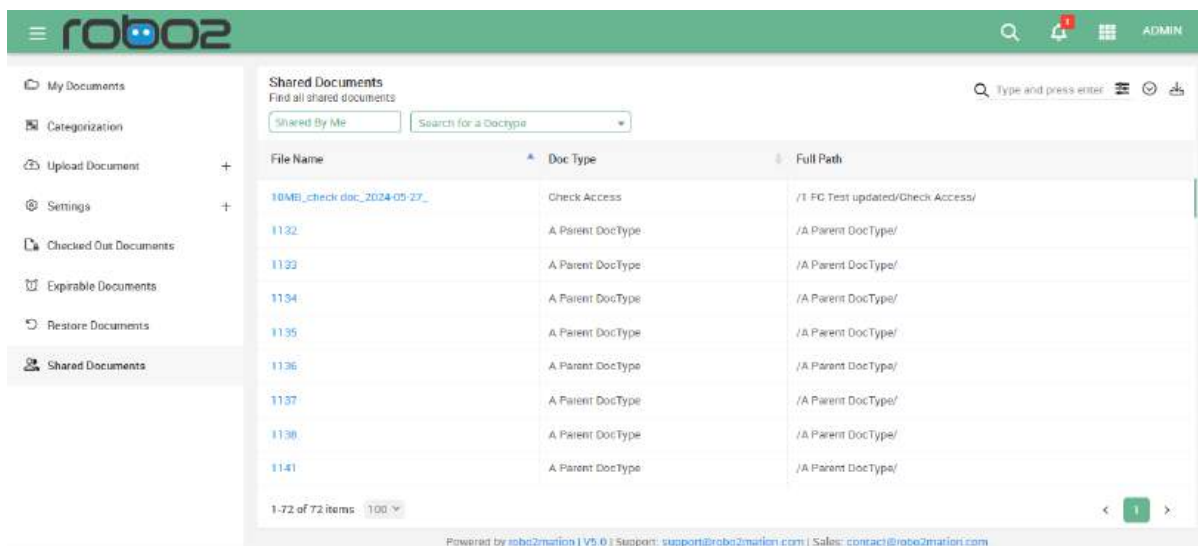

Figure 53: Document Shared by Me

The page contains the following components,

Shared By Me: Shared By Me refers to documents that a user has shared with others, either within the organization or externally. This allows the user to track and manage the documents they’ve made accessible to others, ensuring control over who can view, edit, or download them.

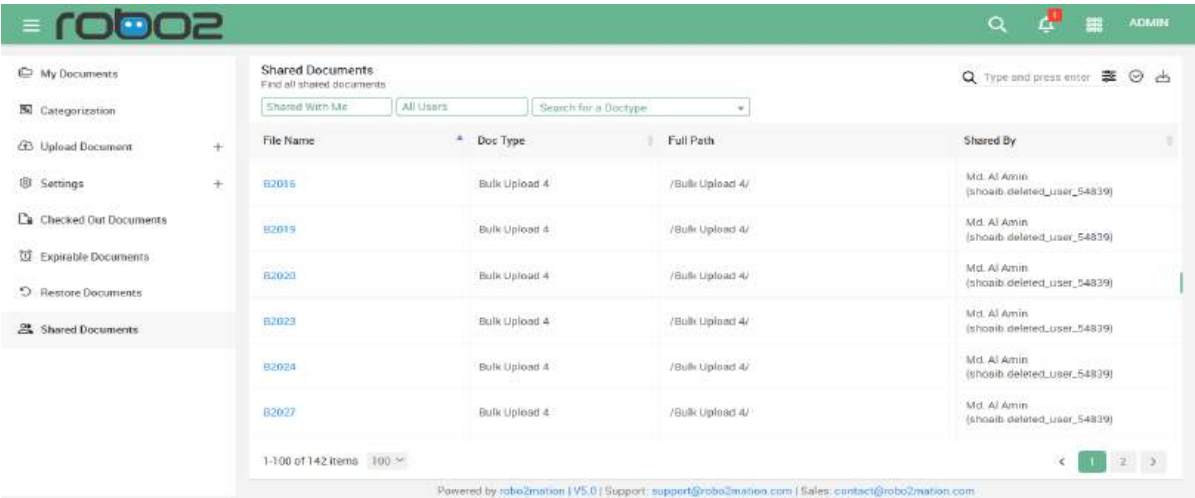

Figure 54: Document Shared with Me

Shared With Me: Shared With Me refers to documents that have been shared with the user by others. These are files that the user has been granted access to, allowing them to view and edit the document based on the permissions set by the person who shared it.

Document Full View

Document Full View provides a detailed display of a document's content along with its system defined metadata & user defined metadata. It also includes action options like download, print, share, and edit, depending on user permissions.

How to access a document full view?

From My Documents,

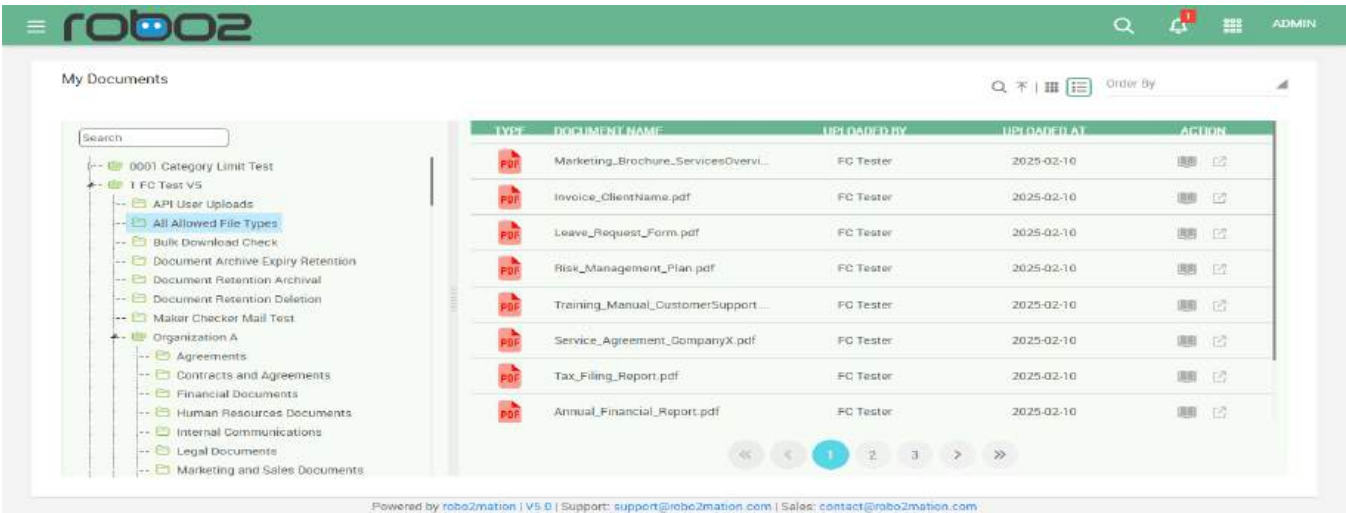

Figure 55: Document access from My Documents

- Navigate to **Menu → Document → My Documents**
- Expand the categories from the tree view to get the required DocType or search a DocType.
- Click on file full view icon.
- File will be opened in a new tab.

From Standard Search,

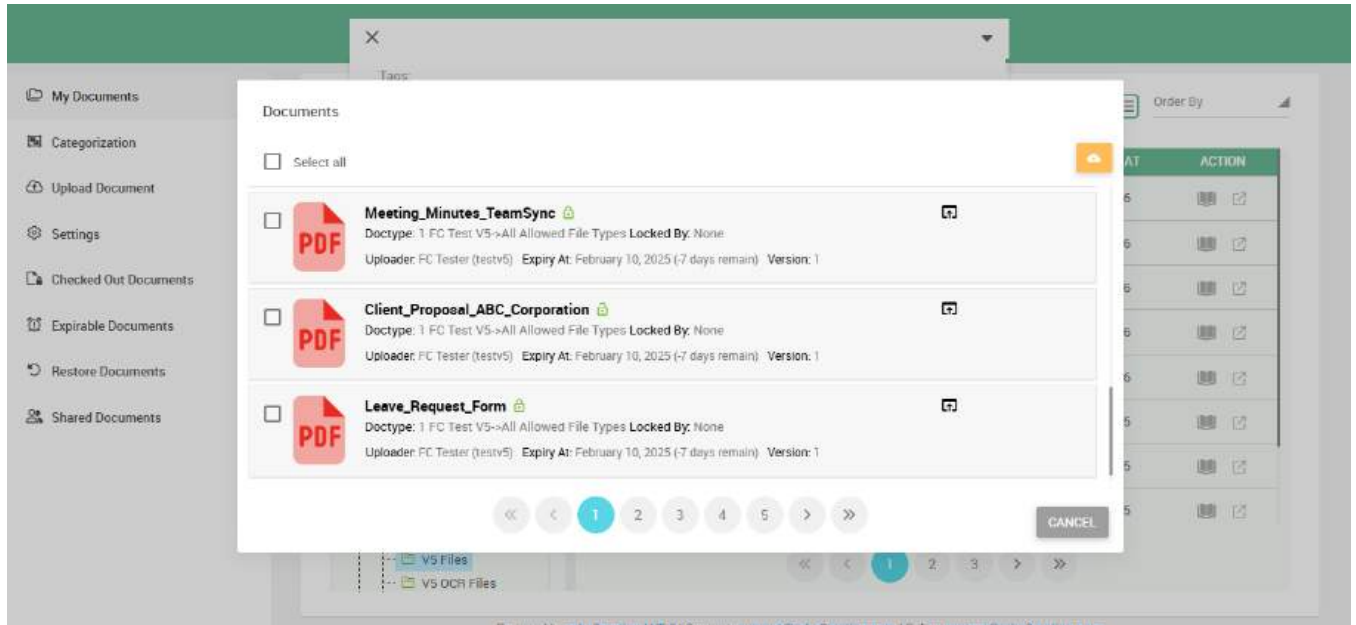

Figure 56: Full View Option from Standard Search

- Search for a document with document name or related metadata and press enter.
- In search results click on the file full view icon.
- File will be opened in a new tab.

From Advanced Search,

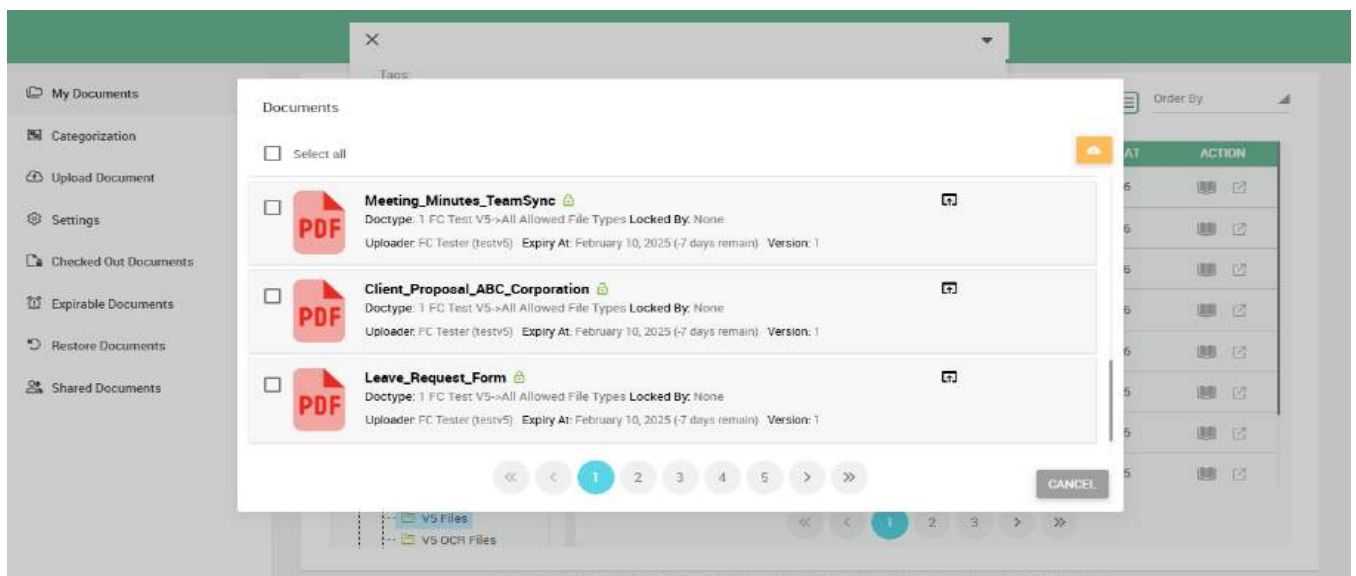

Figure 57: Full View Option from Standard Search

- Go to the advanced search option.
- Select a DocType.
- Click on search.
- In search results click on the file full view icon.
- File will be opened in a new tab.

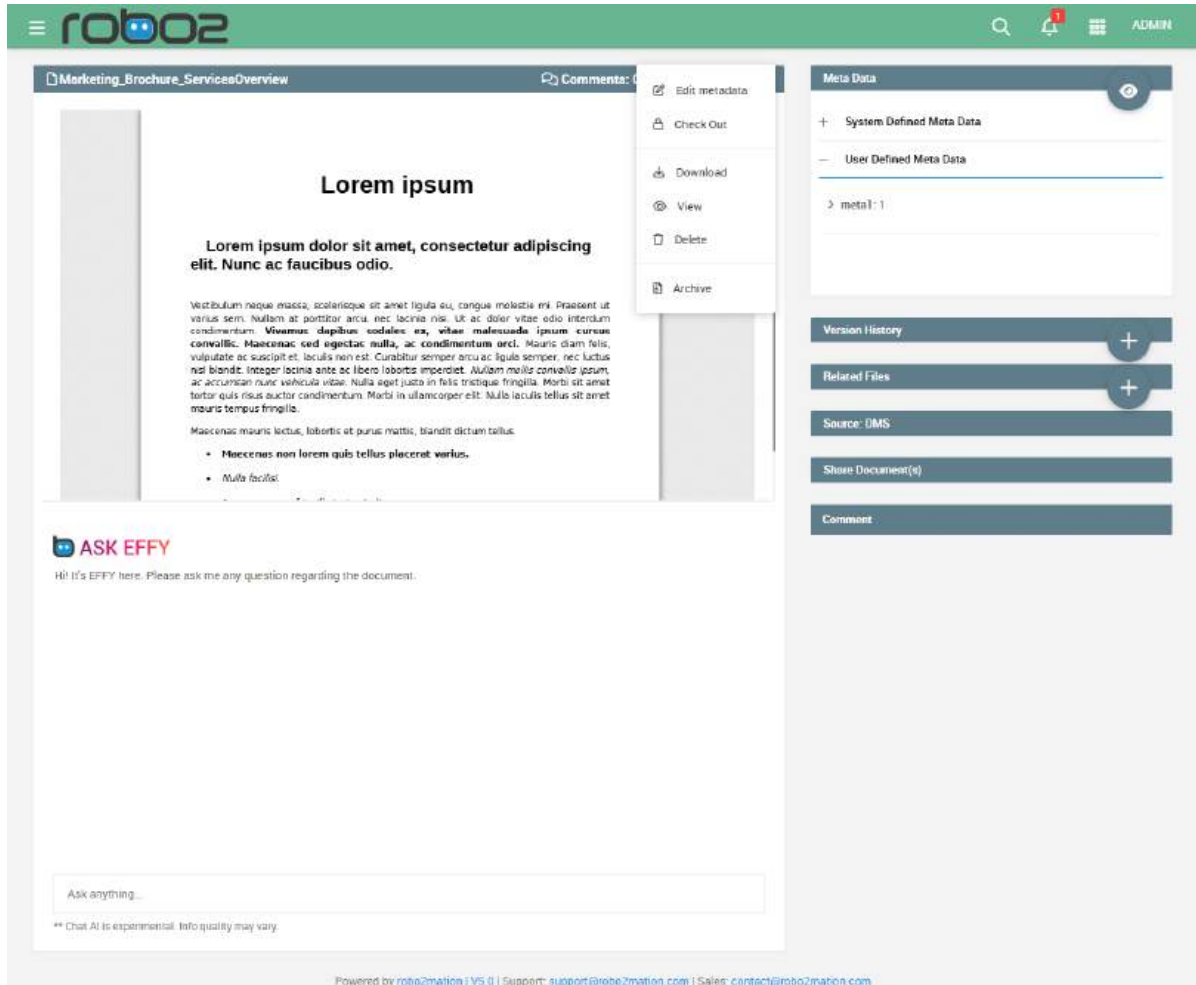

Figure 58: Document Full View

Document Options can be accessed by clicking on the 3 dots option. Below are the document options,

Metadata History: All the Metadata History can be accessed by clicking on the eye icon. It stores all the metadata update information.

Edit Metadata: This allows users to edit or modify document information such as Document Type, Document Name, Tags, Action upon Expiry and Related Metadata.

Check Out: Check out is an option to lock a document from regular activity. Users can check out a privileged document from the Action menu.

Delete: User can delete a document when it's required.

Archive: Document archive will allow users to send a document to the back repository. Archived documents will not be included while searching or other activities. We built this feature to make searches faster.

Download: Permitted users can download the document.

View: With the view option, document opens in a new tab.

ASK EFFY

The screenshot displays the Robo2 application interface. At the top, there's a green header with the Robo2 logo and navigation icons. Below the header, the main content area is divided into three sections:

- Document Viewer:** Displays a PDF document titled "Cartographic applications". The document text discusses the evolution of cartographic maps and the challenges of digital mapping. It mentions that digital maps are more dynamic and can be updated in real-time, but also notes that they can be more complex to create and maintain. The document is 10MB in size and has 0 comments and version 1.00.
- Meta Data:** A sidebar on the right showing system-defined and user-defined meta-data. The user-defined meta-data includes fields like Product Name, Product ID, Product Details, Product Value, Product Purchase Date, and Product Types.
- Chatbot Interface:** A chat window at the bottom with the ASK EFFY logo. It contains a question: "can you summarize the document for me?". Below the question, there's a response from the chatbot summarizing the document's content. The response mentions that the document is a collection of reviews and discussions related to cartography and geological mapping, primarily focusing on a specific book about geologic maps. It lists key points such as the book's praise for its clear diagrams, its comprehensive coverage of geologic mapping techniques, and its educational value. The chatbot also mentions that the document includes updates from the North American Cartographic Information Society (NACIS) and emphasizes the importance of quality in cartographic and geological resources.

At the bottom of the interface, there's a footer with the text: "Powered by robo2mation | V5.0 | Support: support@robo2mation.com | Sales: contact@robo2mation.com".

Figure 59: ASK EFFY

Ask Effy is an AI chatbot that interacts with users through automated conversations to provide information, answer questions, and offer support. It helps users by answering queries about the document's content and providing relevant information related to the pdf document, although the results are experimental and may vary in accuracy and effectiveness.

Ask any uploaded pdf document regarding the document content and know about the document a little better,

- Select any pdf document.
- Go to the document full view.

- At the bottom section there will be “ASK EFFY” section.
- Users can click on the “Ask Anything...” tab to write any queries about the document.
- By clicking on “ASK”, EFFY will provide the necessary information regarding the document.

Other following options can be used from document view window:

- Version History
- Related Files
- Source
- Share Documents
- Comment

Version History

Permitted users can upload a new version of the existing file and give tags, version type, validation dates and add comments on the version.

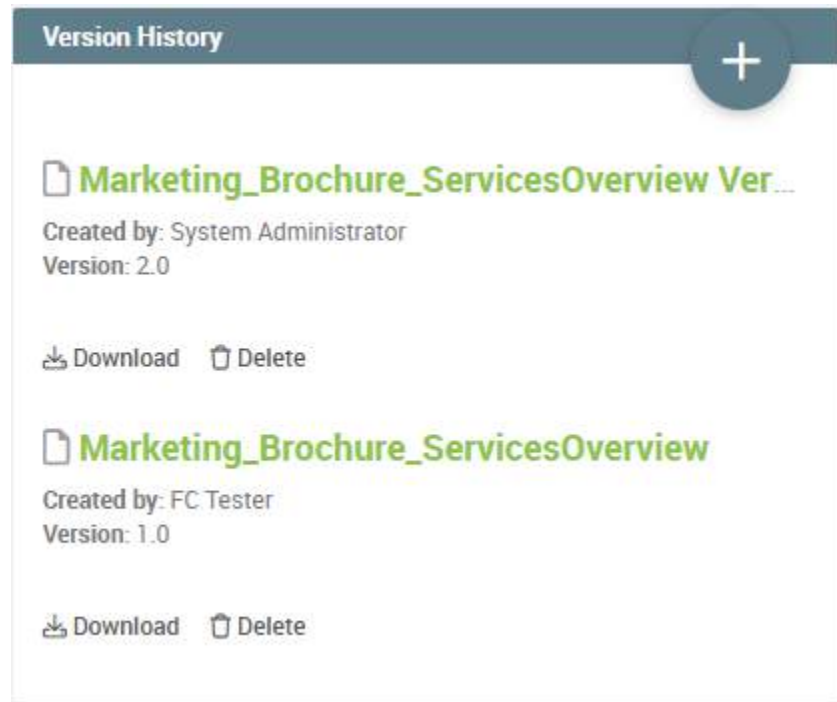

Figure 60: Version Document

Version control is a way to add an update document without losing the current document. From this option users can add a new version of this document and store it as a major or minor version. To do so, click on the “+” icon beside the document version box, an upload window will appear. From here you can upload a new version of document. Allowed file types for version files are, pdf, png, jpg, doc and docx.

Related Files

Users can link to any relevant files that are already uploaded in the system. This helps users easily access supplementary materials, references, or versions linked by content, category, or project, enhancing navigation and context within the document repository.

Figure 61: Related Files

- To link a file, click on the “+” icon beside the Related Files box. It will help users to link to other uploaded files for easy accessibility.
- Documents can also be searched and linked from the related files.

Comment

Users can comment on documents including version documents. This allows users to add remarks, feedback, or discussions directly on a document or a specific version. It facilitates collaboration by enabling team members to communicate, suggest edits, or clarify content without altering the document itself.

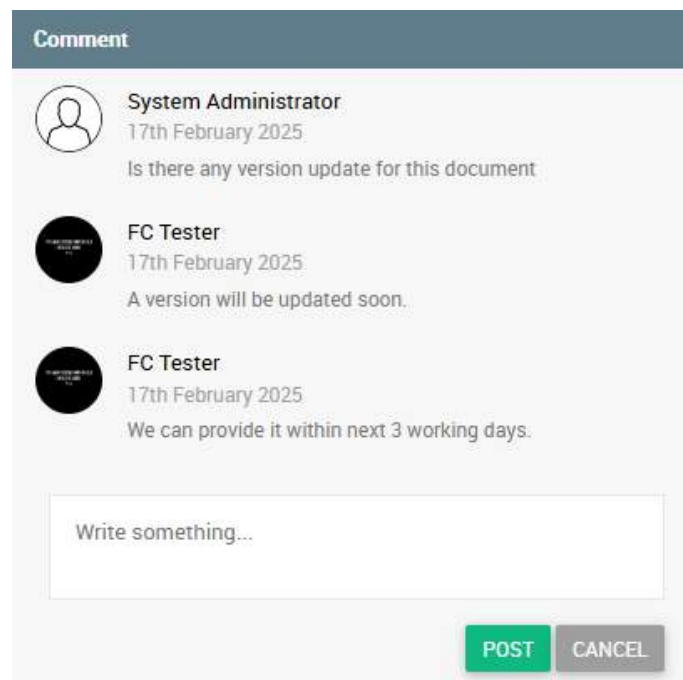

Figure 62: Comment section for documents

Categorization

Categorization in a Document Management System (DMS) involves creating categories and document types (doctypes) and metadata within the doctypes to organize and classify documents efficiently. This process helps in grouping related documents based on their content, purpose, or business function, making it easier to search, retrieve, and manage them. Categories and doctypes ensure better organization, streamlined workflows, and improved document accessibility within the system.

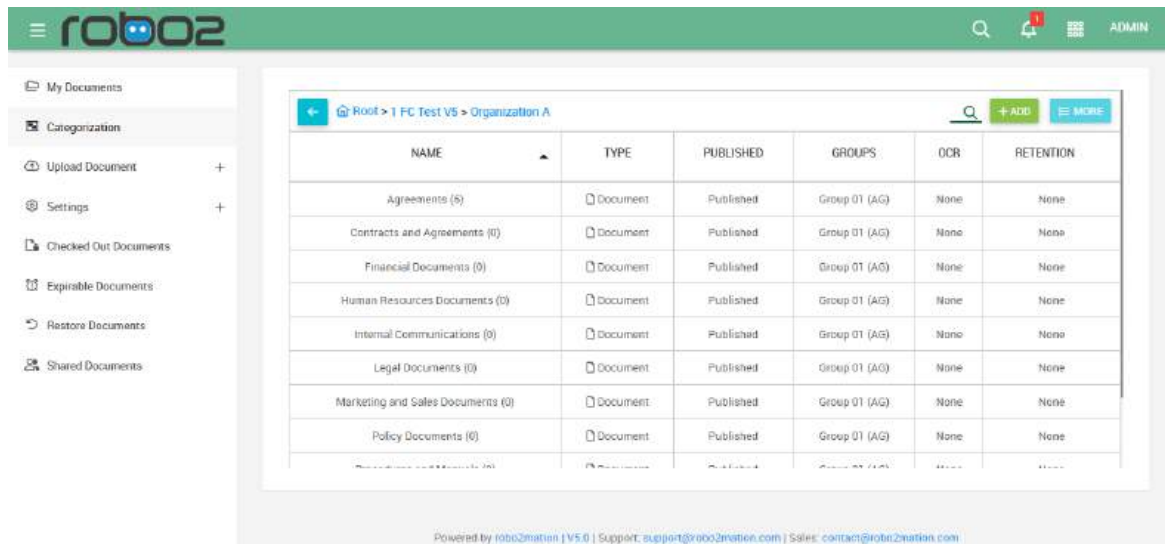

Figure 63: Categorization

Create Category/DocType

Admin and authorized users can create document categories and document types. To create a new category or a new document type by completing the following steps:

- Navigate to **Menu** → **Document** → **Categorization**.
- You will find an add button on the right side of the window.
- Click on the “+Add” button and the system will ask for a category or document type name.
- Enter a category/document type name and click on save.
- If you wish to create a multilayer category, then double click on the already created category and then follow the above instruction again.
- By doing this you can create up to five sub-categories.

NOTE: The system will not allow creating any category or documenting type under a document type. To create a multilayer document category, the user must select ‘Category’ from the dropdown menu. The ‘Document’ is the end edge of document categorization.

Category/Document type Add, Update, Delete, Assign Group, OCR, Notify, Publish/Unpublish and Retention

Category/Document Type Add: To Add a Category/Document Type, click on “+ADD” option, select category/document type and input name to add the category/document.

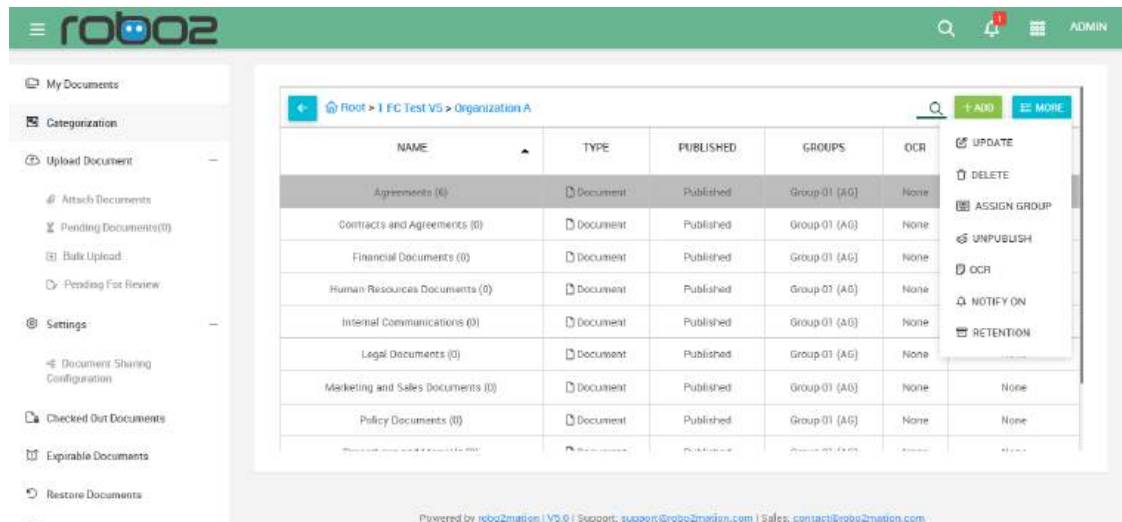

Figure 64: Category/DocType Options

Category/Document Type Update: To update or delete any document category or type select the expected document category/type and click on update button to update and delete button to delete.

Document Type Assign Group: To give users access to the document type, user group should be assigned in the assigned group to get document access.

Document Type Publish/Unpublish: Published is an option to help you to open a document type for the assigned user, and unpublished will help you to hide the document type from the assigned user. To change the publish status, click on the publish button and change the status from the dropdown menu and save it.

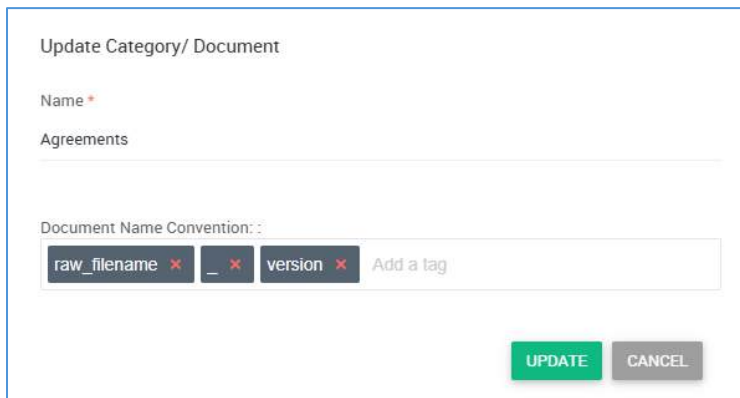

Document Type OCR: To retrieve a document through its content search, OCR should be enabled for the respective document type. When OCR is enabled & after document upload OCR status is “Done”, the “Content Search” option will be available in “Advanced Search” & “My Documents” search.

Document Type Notify: With the “Notify” enabled, user groups assigned in “Owner Group” will get Document Download & Delete notifications of the documents uploaded in that document type.

Document Type Retention: Document Type “Retention” allows users to “Archive” or “Delete” the documents of that document type within the given period (in months).

Document Naming Convention

The Document Naming Convention feature in a DMS ensures consistent and standardized naming of documents, making it easier to organize, search, and retrieve files. It includes guidelines for using specific formats, prefixes, and keywords.

The screenshot shows a web form titled "Update Category/ Document". It has a "Name *" field with the value "Agreements". Below this is a "Document Name Convention" section. It contains a text input field with the value "raw_filename _ version" and a placeholder "Add a tag". There are three small buttons with red 'x' icons next to "raw_filename", "_", and "version". At the bottom right are "UPDATE" and "CANCEL" buttons.

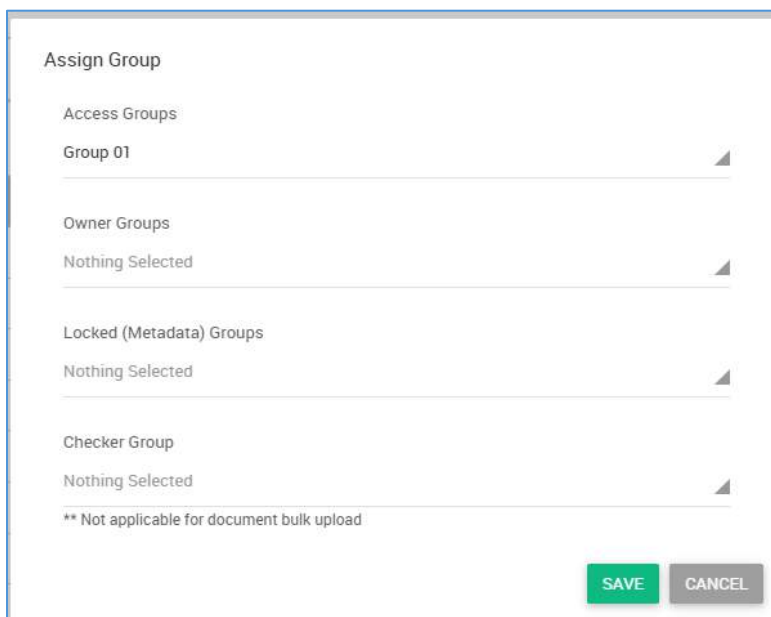

Figure 65: Document Naming Convention

Document naming convention can be set by following the below steps,

- To add document name convention, you need to go to “Document Categorization”.
- Then select a document type.
- Click on “update” button.
- Write variable or raw file name & then press “ENTER” key.
- Then click on “Save” button.

Assign Groups in DocTypes

After creating the document type, the admin needs to assign some user to the particular document to make it accessible. We have already created a group where we assigned a few users, now all we need to do is assign the created group to a document type.

The screenshot shows a web form titled "Assign Group". It has four sections for selecting groups: "Access Groups" with "Group 01" selected, "Owner Groups" with "Nothing Selected", "Locked (Metadata) Groups" with "Nothing Selected", and "Checker Group" with "Nothing Selected". Each section has a dropdown arrow on the right. At the bottom, there is a note "** Not applicable for document bulk upload" and "SAVE" and "CANCEL" buttons.

Figure 66: Assign group in Document Type

- To assign a user to a document type, select the document type and click on “Assign Group”.
- After clicking on assign group, you will be asked to select the group from the dropdown menu.
- To give normal access to the doc-type you need to assign groups as “Access Groups”.
- To give ownership access you need to assign groups as “Owner Groups”.
- To share doc-type but lock some metadata you need to assign groups as “Locked (metadata) Groups”.
- To assign user as checker need to assign groups as “Checker Groups”.
- Then click on the save button.

Metadata Fields

In Document types, Metadata provides additional information about the document. In the context of documents, it refers to descriptive details such as the document’s title, author, creation date, file type, and other relevant attributes. Metadata helps organize, manage, and retrieve documents efficiently by providing context and aiding in their classification and searchability.

Add Meta field ⓘ

* Star (*) marked fields are mandatory.
 * For all date related fields "DATA TYPE" must be "DATE"

Data Type

- DropDown
- Date
- Float
- Integer
- TextArea
- String ✓

Figure 67: Metadata Fields

To store documents in a structured and organized way, we must have some parameters to tag with each document. Already we have created document category/type, now we will add Meta field into the document type. So that we can upload a document with document index value and later on we can search and retrieve any document easily.

- Open created document type. (We cannot add meta field within a category, meta field can be added only after document type)
- Click on the “+Add” button, a mini window will appear.
- Enter your expected field name, document type, display name, default value (if needed), Order, Required status. Document type description is given below:

String = Short Text value (For string data type, you can define the data minimum length and maximum length)

Text Area = Long Text value

Integer = Number value

Float = Number with decimal value

Date = Calendar date value

Dropdown = Dropdown value

- Order is how you sort the meta field and required status will help you to set the meta field as mandatory input field.
- You can make a field unique by selecting yes and no otherwise.
- Also, you can update or delete created meta field by using “Update” “Delete” button

Deleted Category/DocTypes

Category/DocType that has been deleted are found in Deleted Categories page. Users can access information such as deleted category/doc type name, type, map, restore option, permanently delete option, full path.

- Go to Menu → Document → Categorization → Deleted Categories.
- All the deleted categories are stored here with name, type, map, restore option, delete option, permanently deletion date, full path of the document.
- To restore or delete the document permanently, simply click on the “restore now” & “delete permanently” buttons.
- A tab will be shown with yes/no button, click yes and document will be restored or deleted permanently.

User Options

The **User Options** section provides admin with the flexibility to manage its settings and configure system-level preferences.

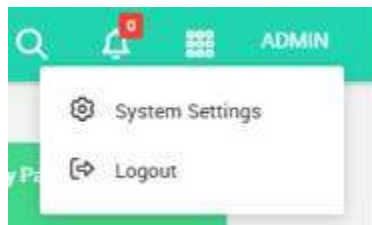

Figure 68: User Options

System Settings: This section provides configuration options for system-level settings, ensuring consistent and branded user experience. It includes the following features:

- **Product Name and Logo:** Administrators can set or update the product name and logo, ensuring consistent branding throughout the platform.

- **Test Mail:** This feature allows users to configure and test email settings to ensure successful delivery of system-generated emails, such as notifications and alerts.

System Settings

Product Name and Logo

Figure 69: Product Name and Logo

To access system logo and product name follow the below steps,

- Click on username.
- Click on “System Settings”.
- Make necessary changes in Product Name, Logo, Navbar color as required.
- Click “SAVE”.

Test Mail

Figure 70: Test Mail

Announcement

The Announcement Page keeps users informed with important updates, news, and events. It allows users to view details and search for specific posts. Admins can create, edit, and manage announcements, ensuring relevant information reaches the right users.

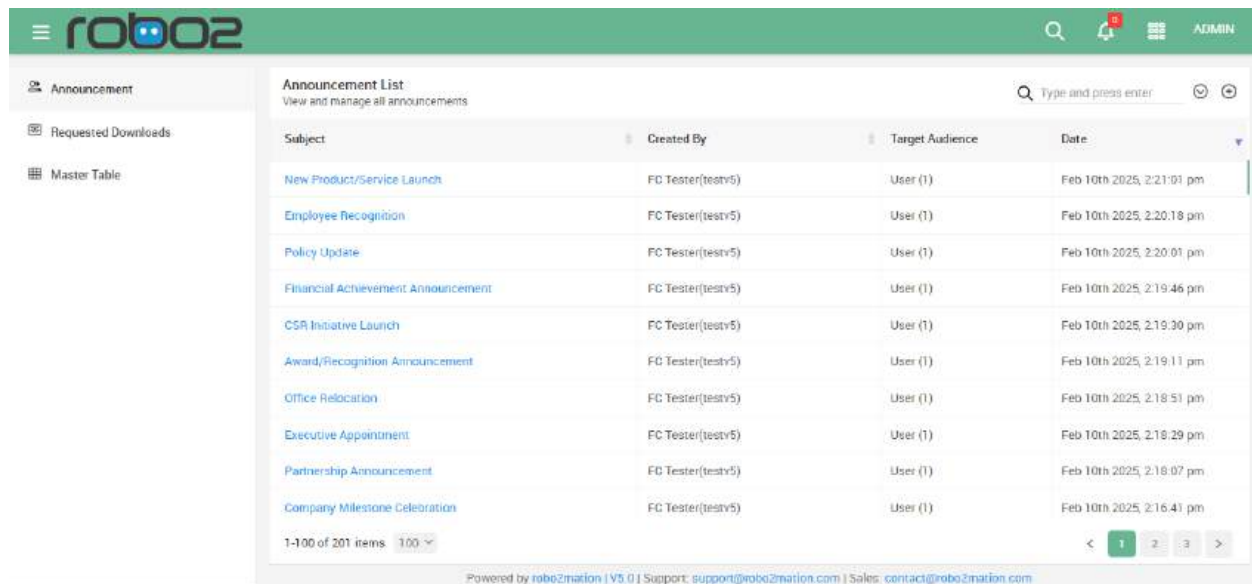

Figure 71: Announcement

To access Announcement page, follow the below steps,

- Go to “Admin” → “Announcement”.
- Announcement list will be shows and clicking on the subject line the full announcement will open in a modal.
- We can search announcement with the subject.

Figure 72: Create Announcement

- To create an announcement, click on “+” icon
- We can select target audience by ‘user’, ‘group’ or ‘all user’
- Should write what we want to announce under the announcement box
- After writing the announcement simply click on send button
- Announcement will be sent to the selected target audience
- At the bottom section the permitted announcements will also be shown.

Requested Downloads

The Requested Downloads Page provides users with access to all their requested data table downloads. It displays the report title and download link allowing users to download completed files and track their download history in a centralized location.

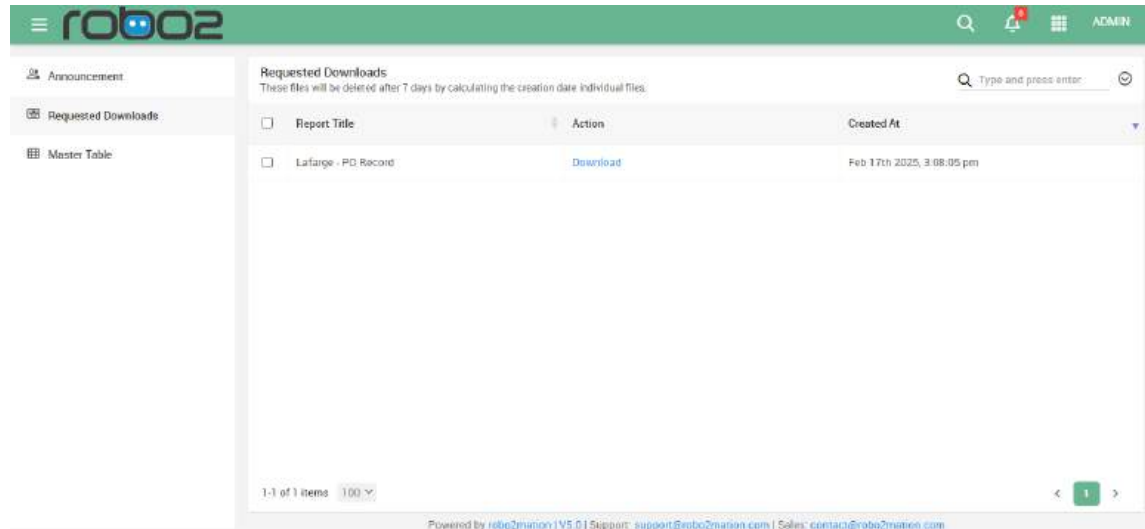

Figure 73: Requested Downloads

To access Requested Downloads, follow the below steps,

- Navigate to **Menu** → **More** → **Requested Downloads**.
- Once files are generated, it'll display on the requested downloads page with a downloadable link.
- Click on the download option and required records will be downloaded.

Report

DMS Reports are generated in a Document Management System to provide insights and data on document activities and processes. These reports can include information such as document access, version changes, user interactions, document status, and other metrics. They help organizations track document performance, ensure compliance, and improve document management efficiency.

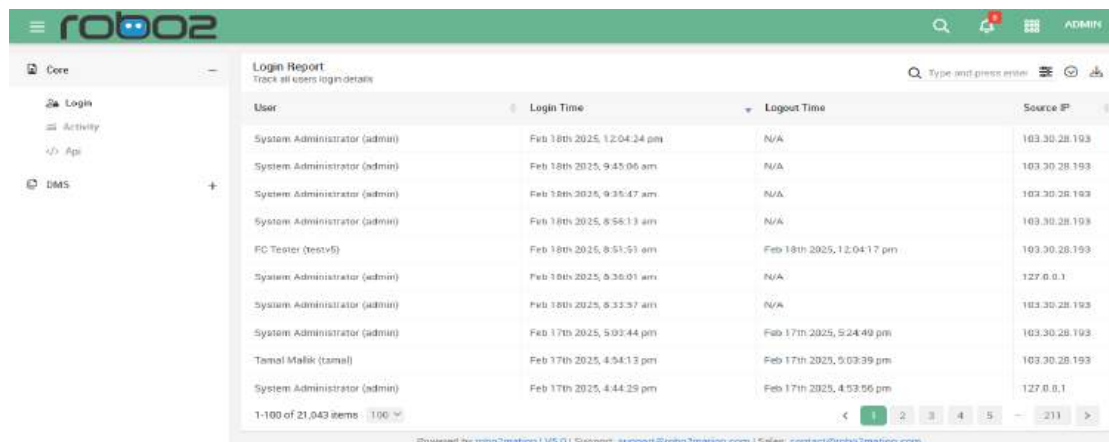

Figure 74: Core Login Report

Core

Core: Login Report

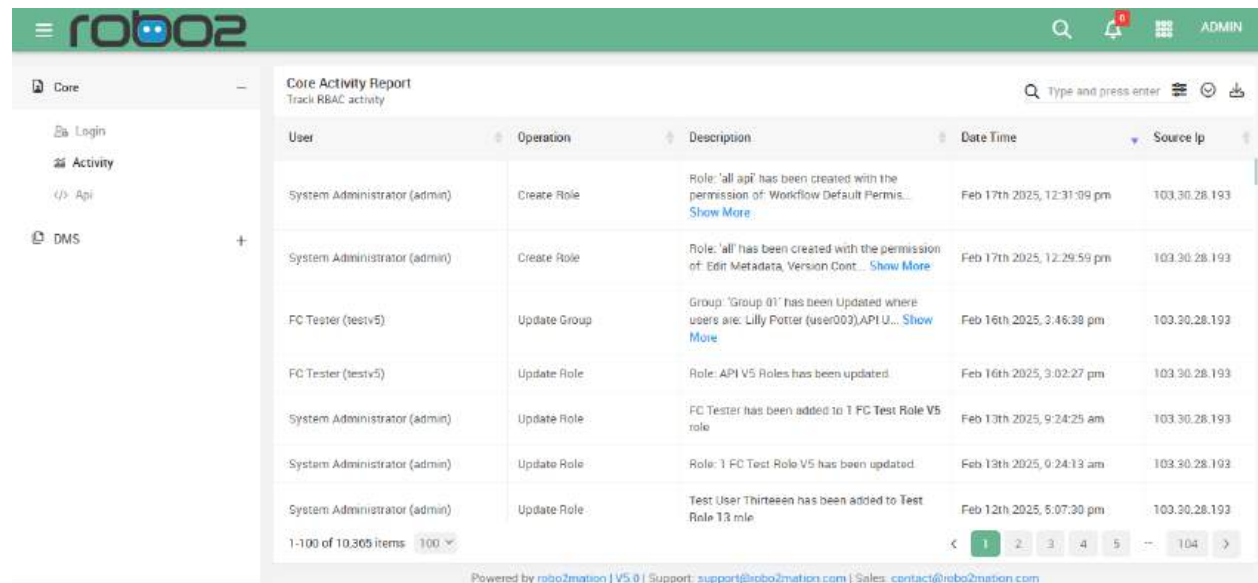

- Go to Menu → Report → Core → Login
- User can filter date range wise and see user's login hours
- Also, can search username and IP address
- Users can copy, print or download csv and excel report by clicking on “Copy”, “Print”, “CSV” & “Excel” buttons respectively.

NOTE: Users with “Admin” role permission and “Core Report Manager” will get access to all users’ “Login” report. Any general user without “Core Report Manager” permission will get access only their individual “Login” report.

Filter, Column Toggle & Download

- Data can be filtered with the user filter option and date range.
- With the toggle option user can customize the data table columns.
- Only selected columns in toggle option will be displayed in the data table.
- With the Download icon, the data table information will be downloaded in excel format.
