## Introduction

### What is Robo2 Workflow Management System?

Workflow Management System is a software solution that automates, tracks, and optimizes business processes by defining structured workflows for tasks, approvals, and document management. It streamlines operations, reduces manual effort, ensures accountability, and helps organizations improve efficiency, maintain compliance, and monitor progress through real-time tracking and reporting.

### Purpose of Workflow Management System

The purpose of a Workflow Management System is to streamline and automate business processes, ensuring efficiency, accuracy, and accountability. It reduces manual effort, enhances collaboration, tracks progress, and helps organizations optimize resources while maintaining compliance.

## Login

The login feature ensures secure access to the Workflow Management System. To log in, users must enter valid credentials (username/email and password) to authenticate their identity and gain access to the system.

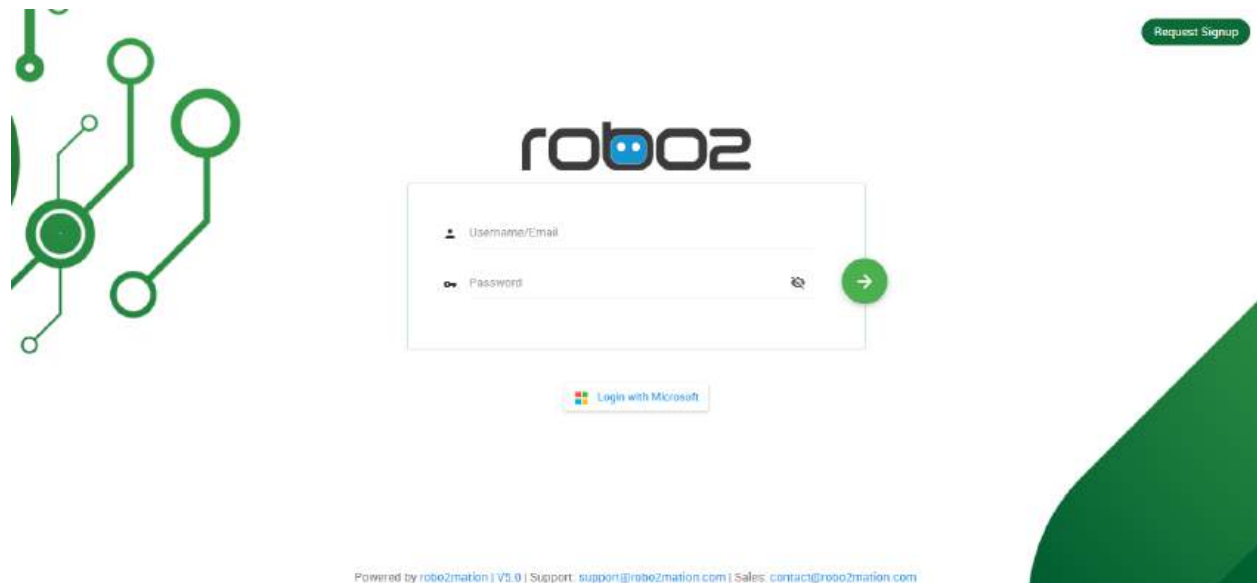

Figure 01: Login Page

## System Login

Steps to login:

- Open your web browser and navigate to the login page (relevant IP or Domain Name).
- Enter your valid username/email and password.
- Click the Login (→) button to proceed.
- With a valid username and password, you will be redirected to the dashboard.

## Dashboard

The **Workflow Dashboard** offers a comprehensive overview of workflow activities, featuring widgets that display **pending requests**, **overdue requests**, **unclaimed tasks**, **query requests**, and **my participated tasks**. It also includes a comparison of **inbox tasks vs. my participated tasks**, a **new application list** for initiating applications, a **task summary**, and **monthly statistics**, providing users with a clear and organized snapshot of their workflow and tasks.

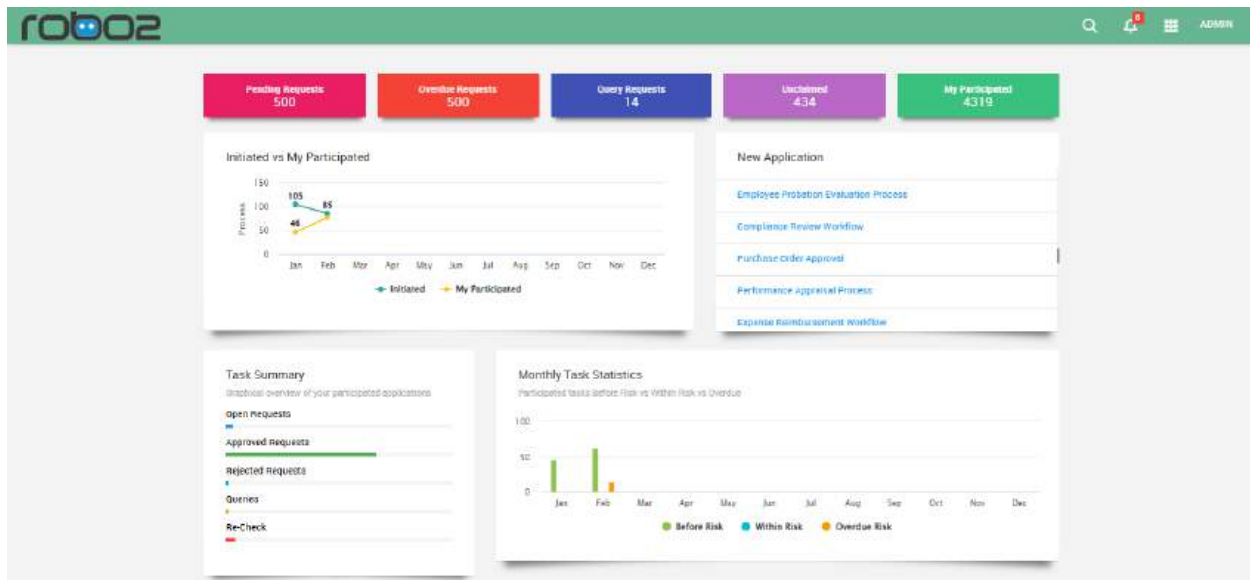

Figure 02: Dashboard

## User Management

The User Management feature allows administrators to create, update, and manage user accounts, groups, roles and signup requests within the DMS. Administrators can assign roles, set permissions, and control access levels to ensure secure and efficient document handling.

To Access the User Management, click on the menu icon and click on "User Management" option.

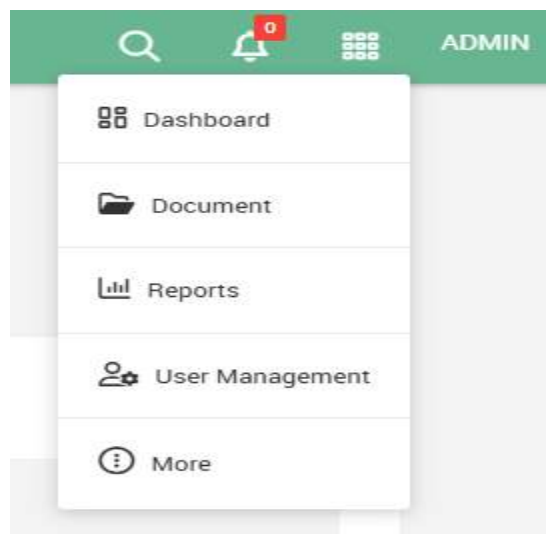

Figure 03: Menu

## Users

Users of a DMS are individuals or entities who interact with the system, such as administrators (manage settings), authors (create/upload documents), reviewers (approve/feedback), and regular users (access/search/download documents). Each user type has different access levels and roles.

## Maker-Checker Feature

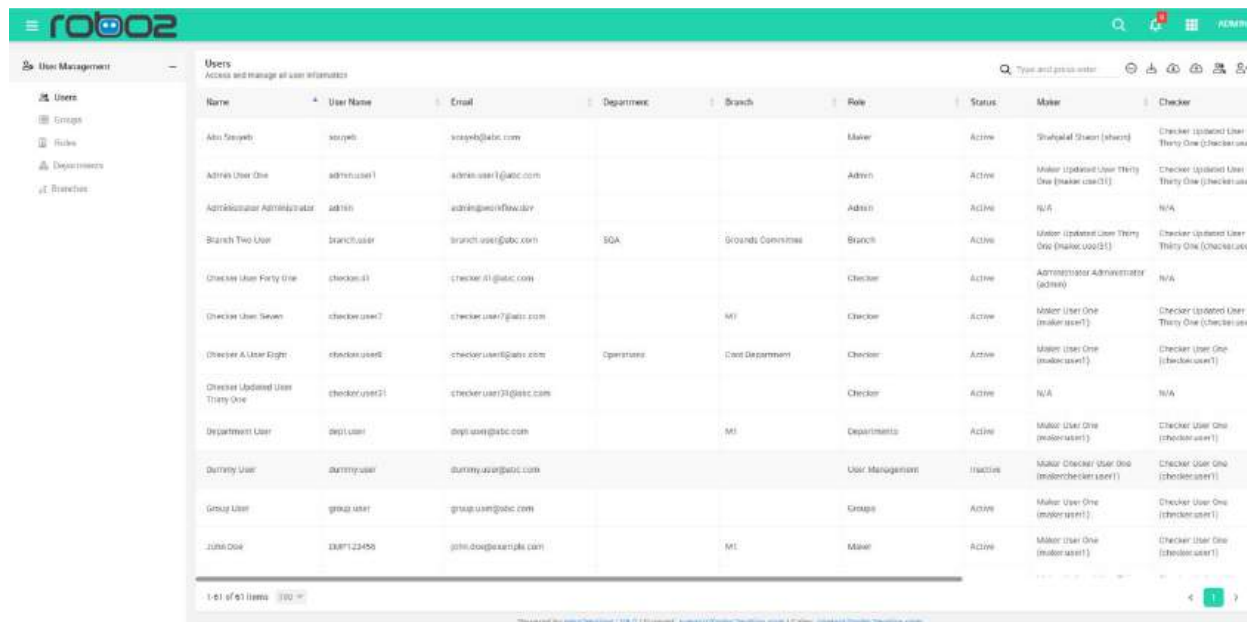

The **Maker-Checker** feature introduces a two-step approval process for creating new users, ensuring higher security and accountability. In this model:

- **Maker:** Creates a user request but cannot directly create the user.
- **Checker:** Reviews the request and either approves or rejects it.

This ensures that no single user can independently create and activate accounts without oversight.

### Add Maker/Checker User by Admin:

Admin (user id:1) can directly create **maker/checker** user without any approval.

Figure 04: Users

Admin (user id: 1) users can create maker/checker users by following steps:

- Navigate to the **Menu** → **User Management** → **Users**.
- Click on “Add User” option to open the user creation form.

The screenshot shows the 'Add New User' form in the ROBO2 system. The form is divided into several sections. At the top, there are fields for 'First Name', 'Last Name', and 'Username'. Below these are 'Email' and 'Address'. There are also fields for 'Phone' and 'Position'. A 'Fetch From AD' button is located next to the 'Username' field. Below these are 'Status' (set to 'Active') and 'Role' (set to 'Newly Selected'). There are also 'Select Branch' and 'Select Department' dropdown menus. At the bottom, there are 'Password' and 'Confirm Password' fields, and a 'Comment' field. There are also 'Upload Image' and 'Remove' buttons for the 'Profile Picture' and 'Signature' fields. At the very bottom, there are 'ADD USER' and 'CANCEL' buttons.

Figure 05: Add User

- Fill out User Details
  - First Name (required and Name should contain only alphabets, special character in ( . - \_ / ( ) ), and length should be between 1 to 20 characters)
  - Last Name (required and Name should contain only alphabets, special character in ( . - \_ / ( ) ), and length should be between 1 to 20 characters)
  - Username (must be unique)
  - Email Address (must be valid and unique)
  - Upload Profile Picture (Optional)
  - Upload signature (Optional)
  - Address (optional)
  - Phone Number (optional)
  - Position (optional)
  - Expiry Date
  - Status (active, inactive or block)
  - Role (e.g., Admin, General User, Viewer)
  - Select Branch (Optional)
  - Select Department (Optional)
  - Active Directory User Checkbox: System will tick it automatically, if the user comes from Active Directory.
  - Password (required): For active directory user, password won't be shown.
  - Confirm Password (required): For active directory user, confirm password won't be shown.
  - Comment (Optional)
- Click on “Add User” to complete user creation

### User Creation Request through Maker:

User with “User Maker” permissions can send user creation requests as shown below. However, user won't be able to login to the system unless a checker approves it.

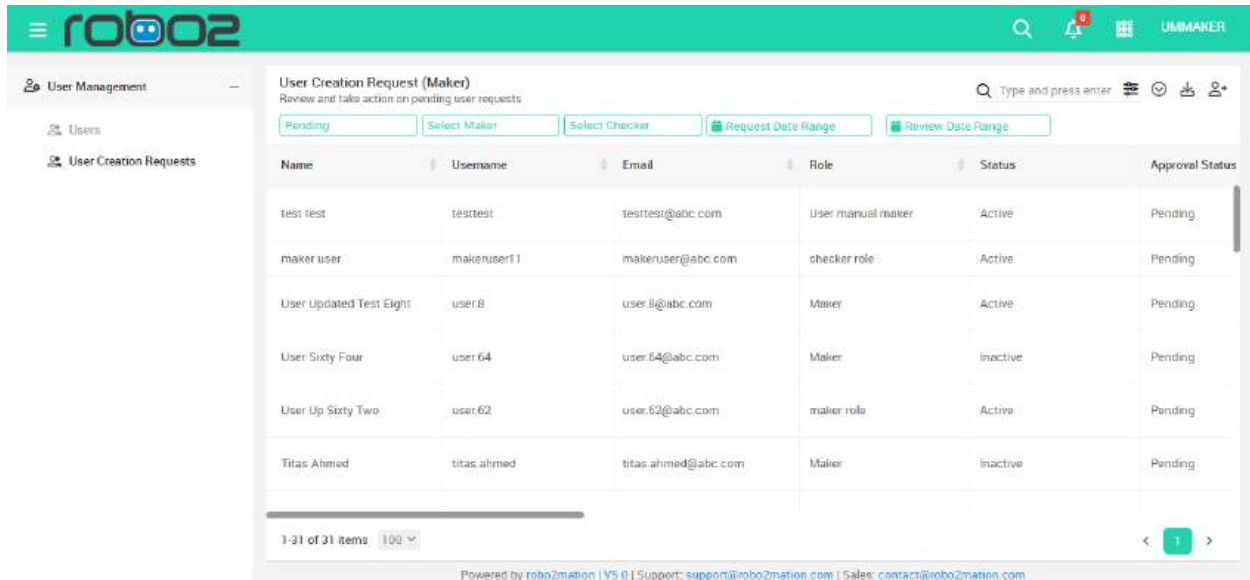

Figure 06: User Creation Request

Maker user can send create new user request by following steps from both “Users” & “User Creation Requests” page:

- Navigate to the **Menu → User Management → Users/User Creation Requests**.
- Click on “Add User Request” option to open the user creation form.

Figure 07: Send User Creation Request

- Fill out User Details
  - First Name (required and Name should contain only alphabets, special character in ( . - \_ / ( ) ), and length should be between 1 to 20 characters)
  - Last Name (required and Name should contain only alphabets, special character in ( . - \_ / ( ) ), and length should be between 1 to 20 characters)
  - Username (must be unique)
  - Email Address (must be valid and unique)
  - Upload Profile Picture (Optional)

- Upload signature (Optional)
- Address (optional)
- Phone Number (optional)
- Position (optional)
- Expiry Date
- Status (active, inactive or block)
- Role (e.g., Admin, General User, Viewer)
- Select Branch (Optional)
- Select Department (Optional)
- Active Directory User Checkbox: System will tick it automatically, if the user comes from Active Directory.
- Password (required): For active directory user, password won't be shown.
- Confirm Password (required): For active directory user, confirm password won't be shown.
- Comment (Optional)
- Click on “Add User Request” to send user creation.

### Approve/Reject User through Checker:

User with “User Checker” permissions can approve/reject user creation requests as shown below. However, user won't be able to login to the system unless a checker approves it.

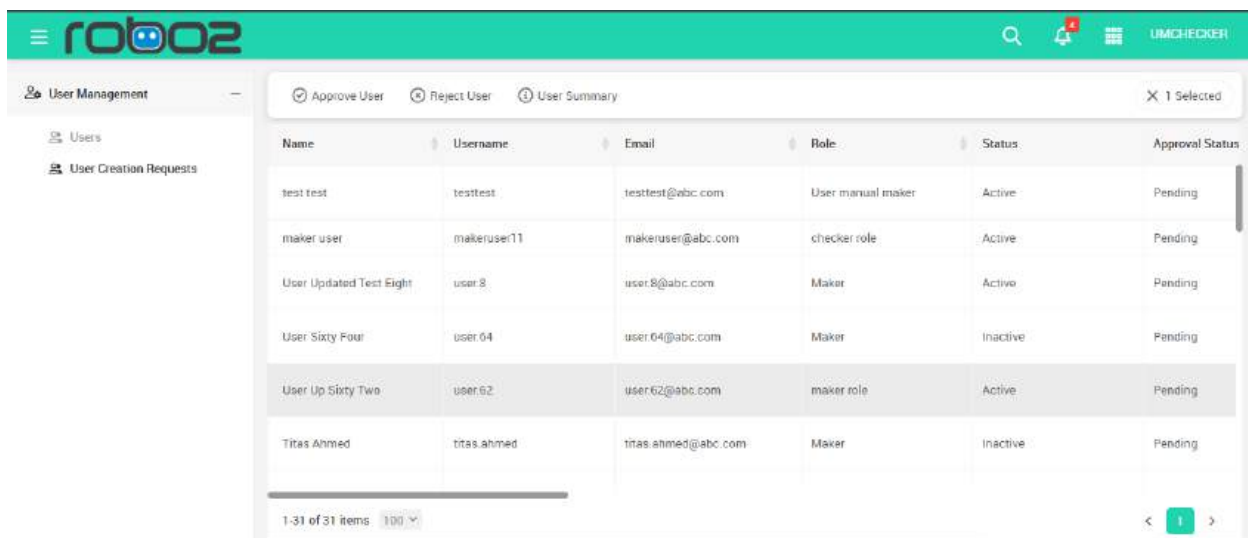

Figure 8: Approve/Reject User

Checker user can approve or reject a user by following steps:

- Navigate to the **Menu → User Management → Users Creation Request**.
- To approve or reject user, First need to select the user and simply clicking on the user's name to select.
- Click on the “approve or reject” icon (✓ or ✗) to create or reject a user respectively.
- When the Checker clicks on the Approve (✓) icon, the user will be created.  
**Notes:** System will allow that user to login to the system with valid credentials.
- For rejection (✗), a popup will appear where the Checker must provide a reason before clicking the Reject button. After submission, the page will refresh automatically.  
**Notes:** System won't allow rejected users to login to the system.

## Find Requested User through Maker/Checker:

Maker/Checker user can find their requested users from “User Creation Requests” page where they can find user by filtering with different data & also can search as shown below:

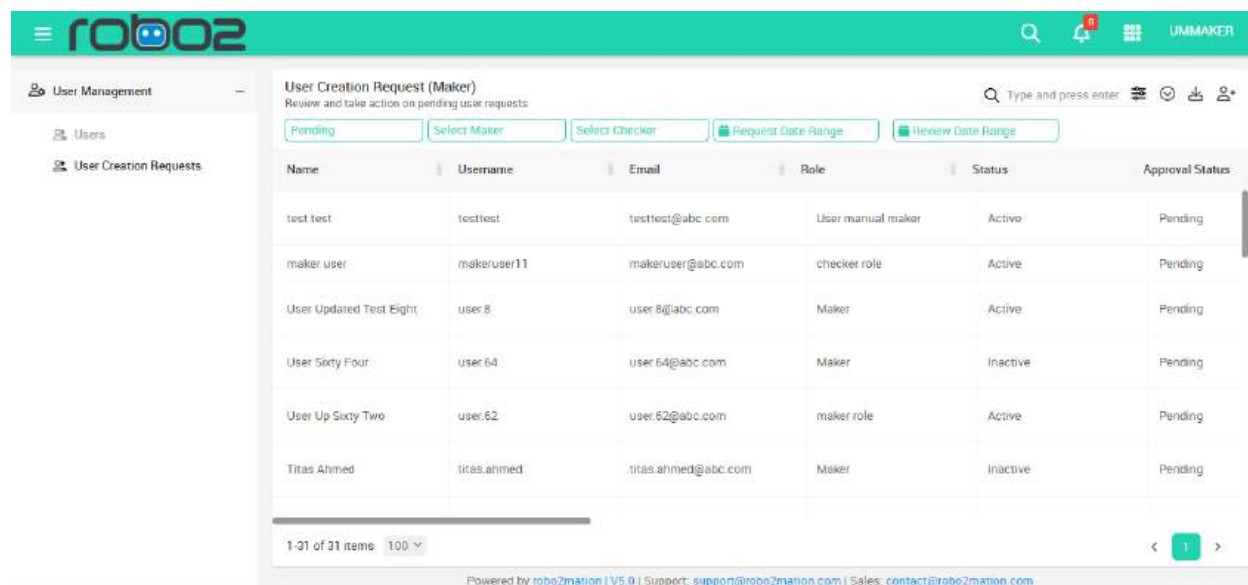

Figure 9: Users Filter

- **Status Filter:** View user requests based on their status:
  - **Pending** – Requests submitted by Maker but not yet reviewed. If the user selects **Pending**, they can see which users are still waiting for approval.
  - **Approved** – Requests reviewed and approved by the Checker. If the user selects **Approved**, they can see which accounts have already been created through checker.
  - **Rejected** – Requests reviewed and declined by the Checker. If the user selects **Rejected**, they can see which users were rejected.
- **Maker Filter:** User can filter requests by a specific Maker who submitted the user request.
- **Checker Filter:** User can filter requests by a specific Checker who reviewed the request.
- **Request Date Range:** Allows the user to see which users were requested within the selected date range.
- **Review Date Range:** Allows the user to check which users were approved or rejected within the selected date range.
- **Search User's Creation Request List:** User can be found by searching with their Name, Username, Email, Role, Branch, Comment
  - Navigate to the **Menu** → **User Management** → **Users**.
  - Click on the search bar.
  - To search for a user from the user list, click on the search icon and search by “Name”, “username”, “role”, “email” rest of the things.
  - The matched results will appear accordingly.
- **Sort User:** Clicking a column's sort icon arranges its data in ascending order; clicking again switches to descending. Each column can be sorted both ways independently.

- **Download User:** When the user clicks on the **Excel button**, two options will appear: **Excel** and **Print**.
  - If the user selects Excel, the data will be downloaded in Excel format.
  - If the user selects Print, a print preview window will open, allowing the user to print the data directly.

## Edit User

Admin user (user id:1) can update user directly as below:

To edit user information,

- First choose the user to edit by simply clicking on the user's name.
- Click on the "Edit User" icon (pen icon) to preview user information.
- Edit the fields as necessary and click on the "Update User" button to send the update request.
- User information will be updated, and the page will refresh.

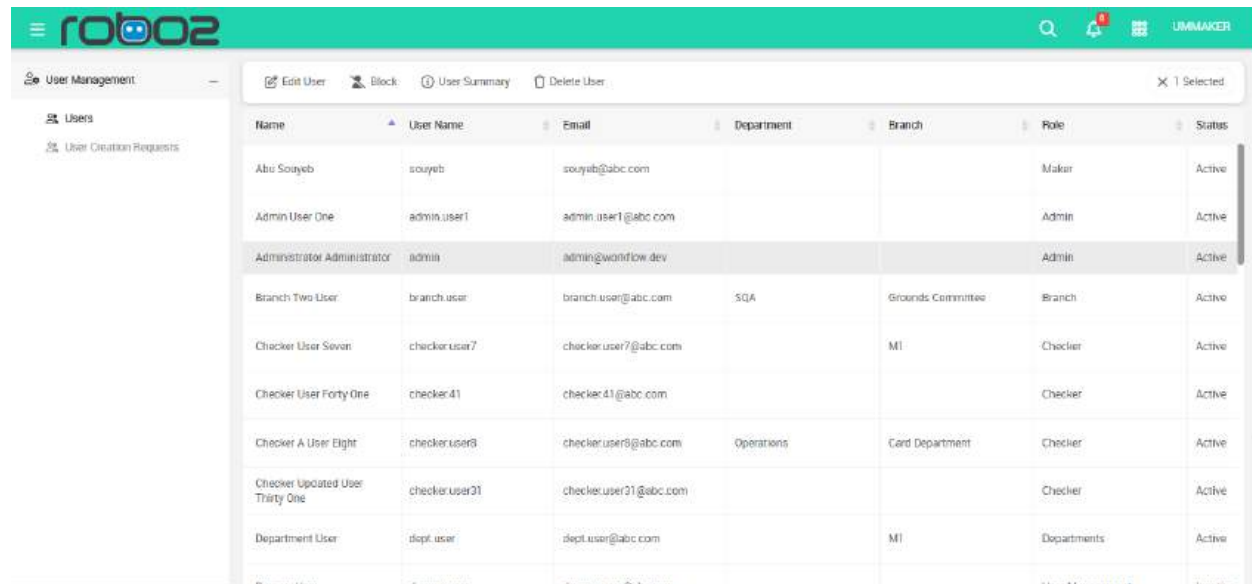

## Edit User through Maker:

- **For Pending User:** Maker user can send user update request. Once checker approves it, the updated information will be affected immediately.
- **For Approved User:** Maker users can send user update requests for the approved users. Once checker approves it, the updated information will be affected immediately.

**Notes:** If user rejects for the user's update request, then system should continue with previous data.

To edit user information,

- First choose the user to edit by simply clicking on the user's name.
- Click on the "Edit User" icon (pen icon) to preview user information.
- Edit the fields as necessary and click on the "Update User Request" button to send the update request.
- User information will be updated, and the page will refresh.

| Department User                 | dept.user      | dept.user@abc.com      |            |                   | Department  | Active |

Figure 10: Edit Users

### Approve/Reject User Update Request through Checker:

- **For Pending User:** Checker can either Approve or Reject the update request submitted by the Maker.
  - If approved → The user information will be applied immediately & create a maker user.
  - If rejected → Checker **Rejects** a user creation request, **no account will be created**.
- **For Approved User:** Checker can review new update requests submitted by the Maker for already approved users.
  - If approved → The updated information will be applied immediately.
  - If rejected → The system will continue with the previous information.

**Notes:** Updated information will only become visible after Checker's approval. Until approval, the Maker will not see the updated data. So, if user rejects the user update request, then system should continue with previous data.

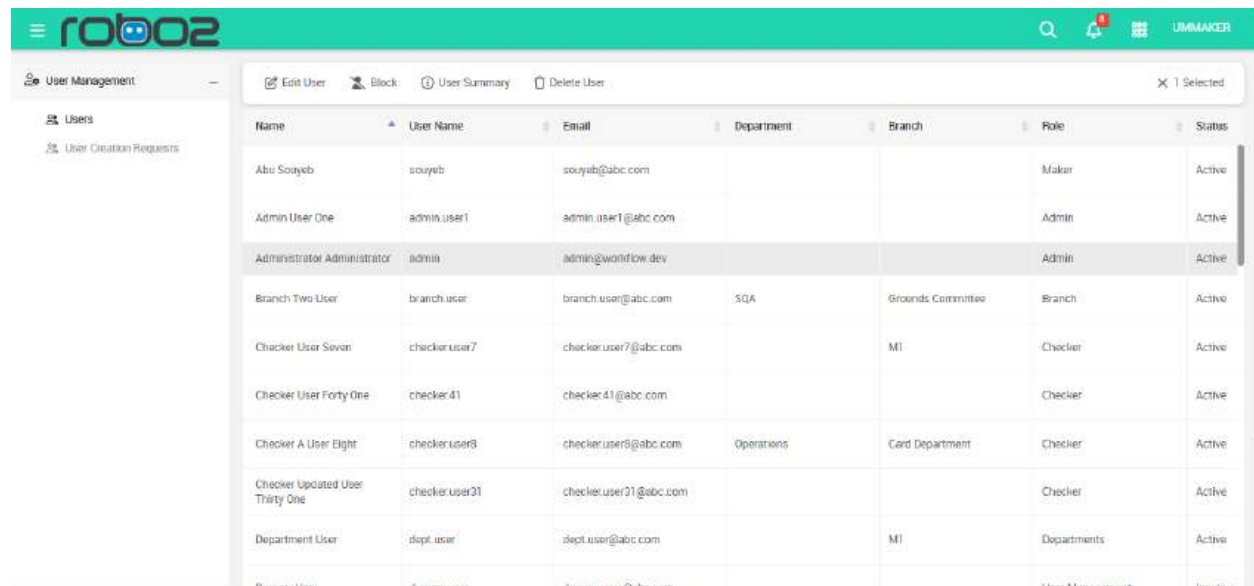

### Block/Unblock User

If any user is found **suspicious** or has security risks, the system allows permitted users to block the user account immediately.

Admin or authorized users can block user by following steps:

- Navigate to the **Menu → User Management → Users**.
- To block a user, First choose the user by simply clicking on the user's name.
- Click on the "Block" (Block icon) to block a user.

**Notes:** Block will take immediate action without checkers' approval.

| Name                            | User Name      | Email                  | Department | Branch            | Role        | Status |
|---------------------------------|----------------|------------------------|------------|-------------------|-------------|--------|
| Abu Souyeb                      | souyeb         | souyeb@abc.com         |            |                   | Maker       | Active |
| Admin User One                  | admin.user1    | admin.user1@abc.com    |            |                   | Admin       | Active |

Figure 11: Block Users

To unblock a user,

- Navigate to **Menu** → **User Management** → **Users**.
- Select the blocked user by clicking on the user's row.
- Click on the Edit User option.
- In the Status field, change the status from Blocked to Active.
- Submit the update request.
- The request must be reviewed by a Checker.
- Once the request is Approved, the user account will be reactivated.

After approval, the user can **log in** again and access the system normally. If the request is **Rejected**, the account will remain blocked.

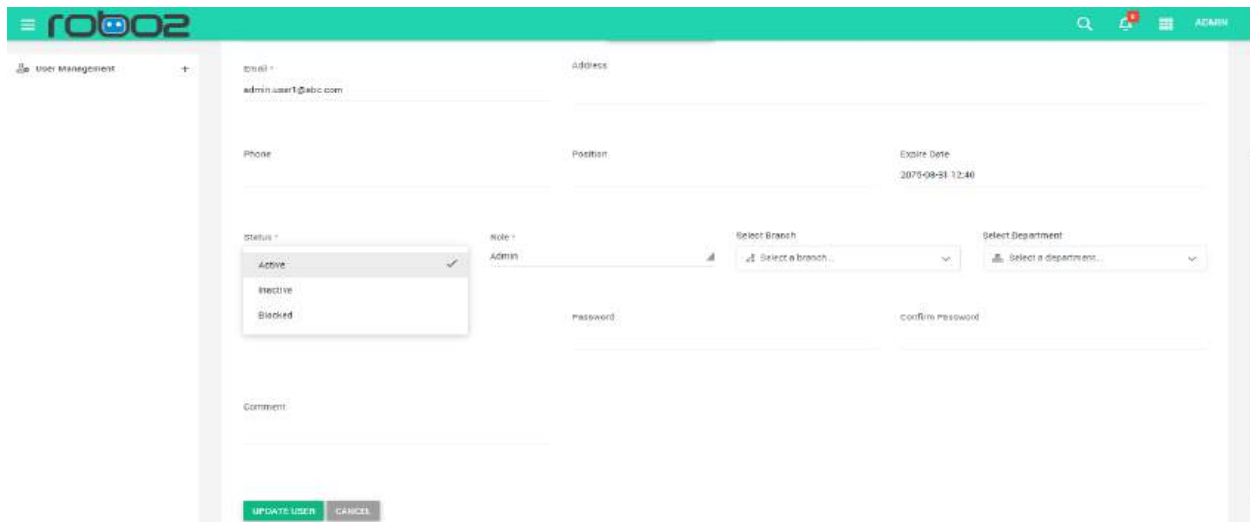

Figure 12: User Unblock

## Lock/Unlock User

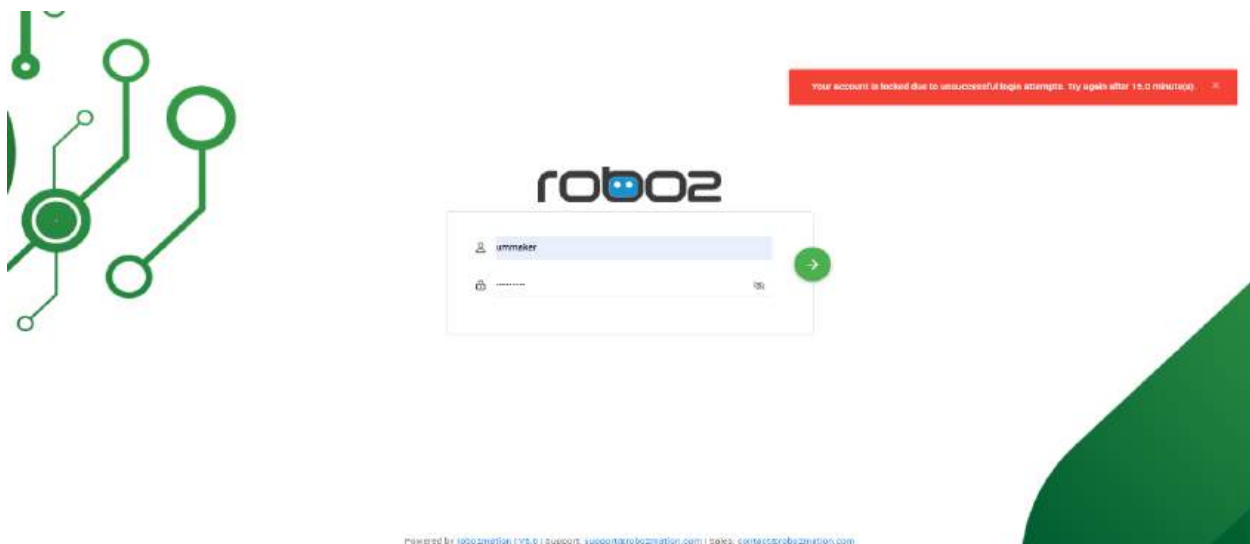

Figure 13: User Lock

- If a user enters an incorrect password three consecutive times, the account will be automatically locked.
- Locked users will not be able to log in until the account is unlocked by an authorized user. To unlock a user.

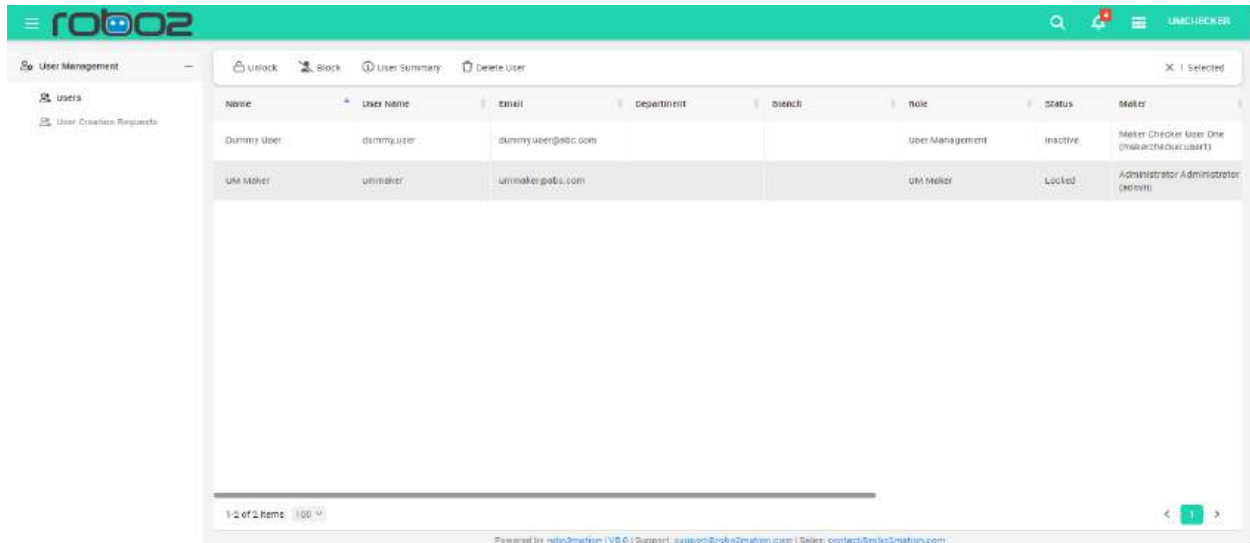

Figure 14: User Unlock

To unlock a user,

- An Admin, Maker, or Checker user can unlock the locked account.
- To unlock, navigate to the User Management → Users list.
- Select a locked user, and the Unlock option will become visible.
- Click Unlock to restore access for the user.

**Note:** Once unlocked, the user can log in using their correct credentials. Unlock will take immediate action without checkers' approval.

## User Summary

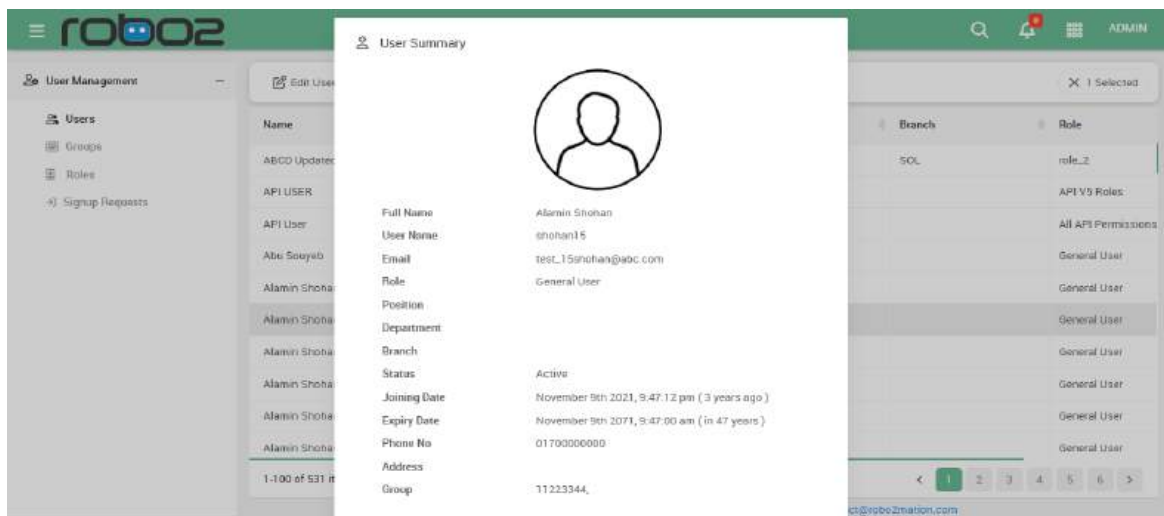

Figure 15: User Summary

- Navigate to the **Menu → User Management → Users**.
- To view user summary, Select the user by simply clicking on the user and click on the user summary icon.
- A pop-up page will appear with the user's summary.

## Delete User

The Delete User feature allows admin or permitted users to remove user accounts from the system. Now, we have the options to delete users.

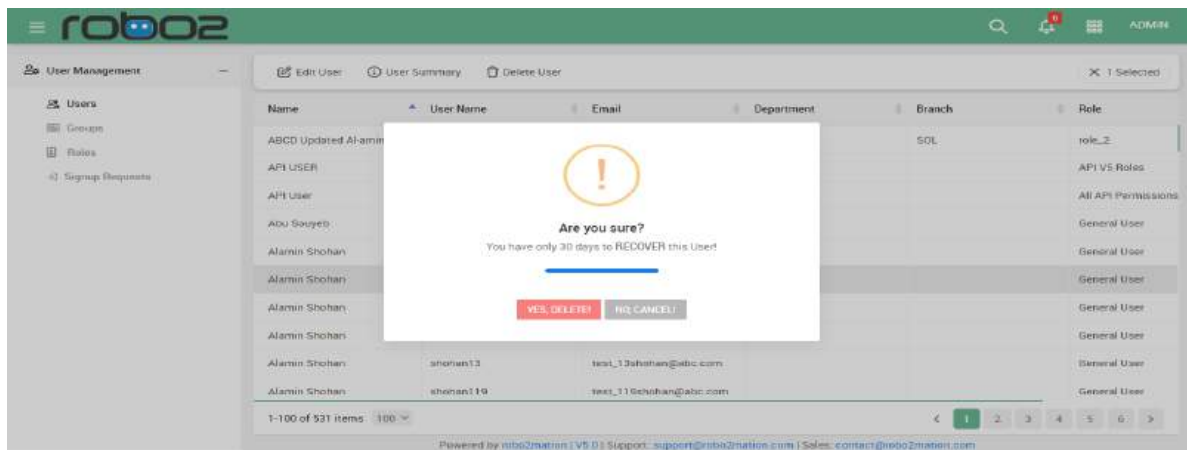

Figure 16: Delete User

Admin or authorized user can delete a user information by following steps:

- Navigate to the **Menu → User Management → Users**.
- Select user and click on the “delete” icon.
- A pop-up window will open with the “Yes, Delete” and “No, Cancel” button.
- Click on “Yes, Delete” to delete the user.

## Delete User

Admin user (user id: 1) can view deleted user list.

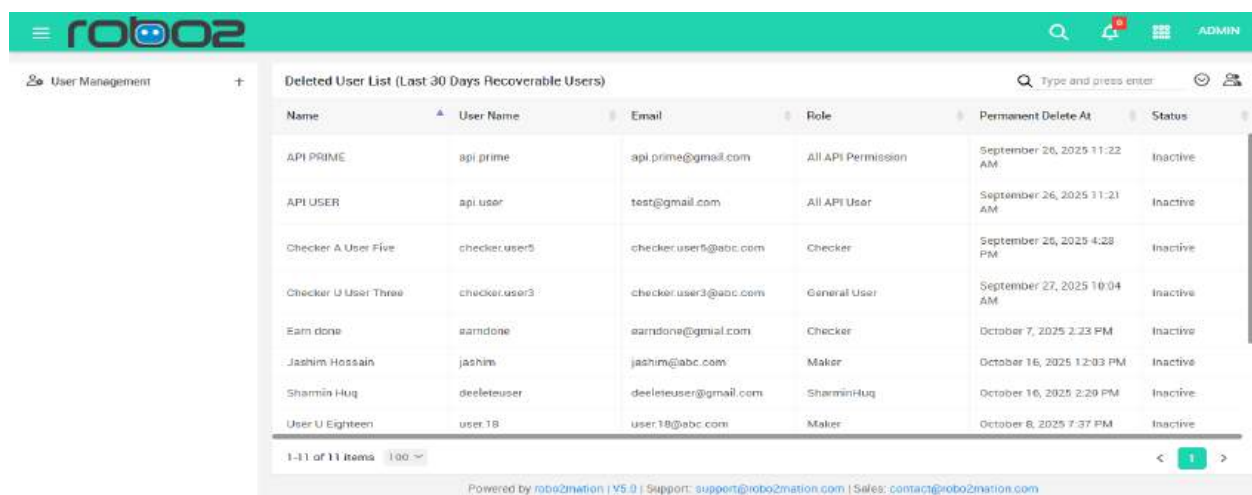

Figure 17: Deleted User List

## Search User's from User List

- Navigate to the **Menu** → **User Management** → **Users**.
- Click on the search bar.
- To search for a user from the user list, click on the search icon and search by “Name”, “username”, “role”, “email” or rest of the things.
- The matched results will appear accordingly.

## Column Toggle & Download

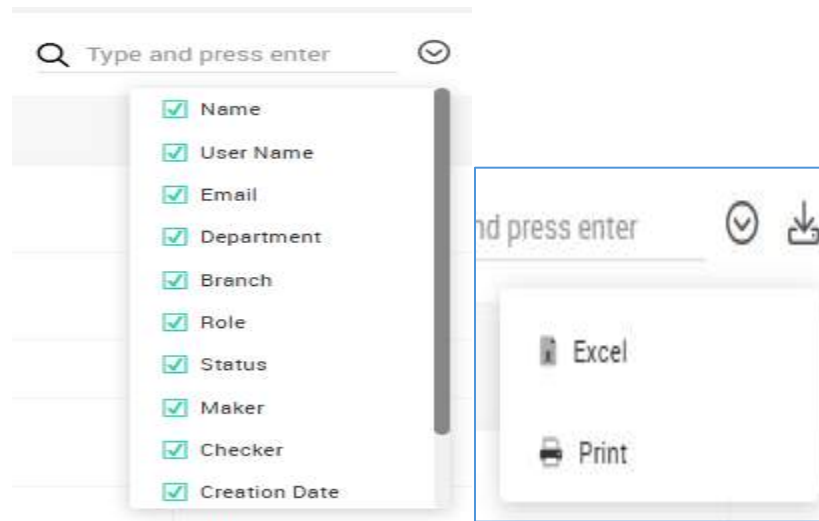

Figure 18: Column toggle & Download

- With the toggle option user can customize the data table columns.
- Only selected columns in toggle option will be displayed in the data table.
- With the Download icon, the data table information will be downloaded in excel format.

**Sort User:** Clicking a column's sort icon arranges its data in ascending order; clicking again switches to descending. Each column can be sorted both ways independently.

| Name                        | User Name     | Email                 | Department | Branch            | Role    |
|-----------------------------|---------------|-----------------------|------------|-------------------|---------|
| Abu Souyeb                  | souyeb        | souyeb@abc.com        |            |                   | Maker   |
| Admin User One              | admin.user1   | admin.user1@abc.com   |            |                   | Admin   |
| Administrator Administrator | admin         | admin@workflow.dev    |            |                   | Admin   |
| Branch Two User             | branch.user   | branch.user@abc.com   | SQA        | Grounds Committee | Branch  |
| Checker User Seven          | checker.user7 | checker.user7@abc.com |            | M1                | Checker |
| Checker User Forty One      | checker.41    | checker.41@abc.com    |            |                   | Checker |

Figure 19: Sort Table Data

## Groups

Groups in the DMS enable administrators to organize users and assign shared permissions for document access and uploads. By linking groups to Access Groups, Owner Groups, Locked Metadata group and Checker Group within DocType categorizations, administrators can control which users can access or upload specific document types, ensuring secure and efficient permission management.

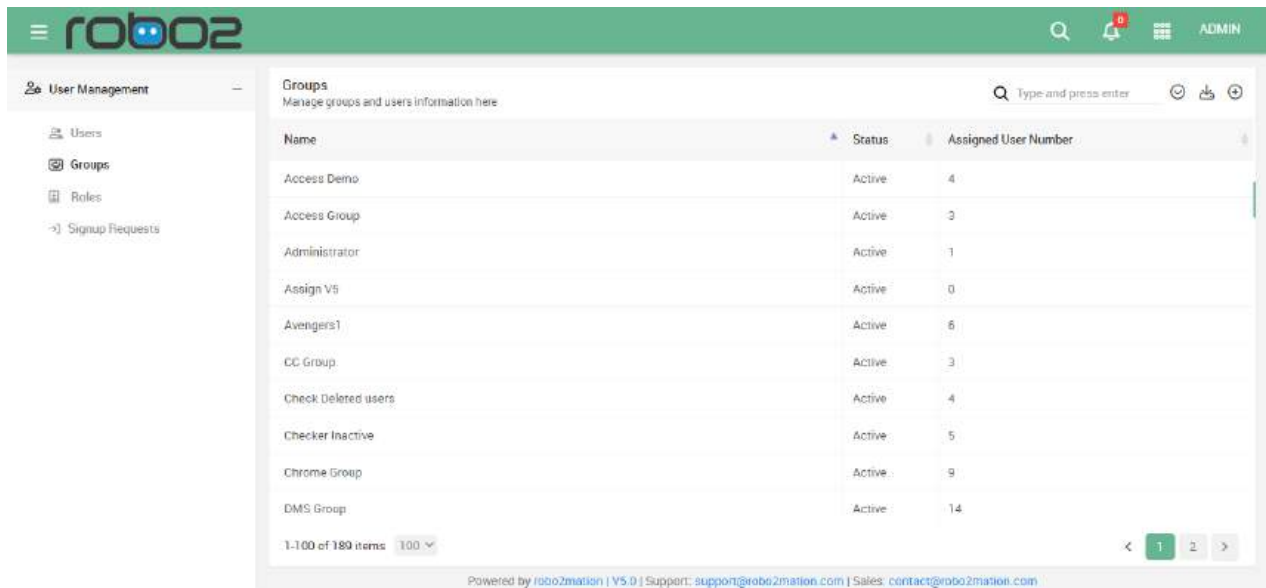

Figure 20: Groups

## Create Group

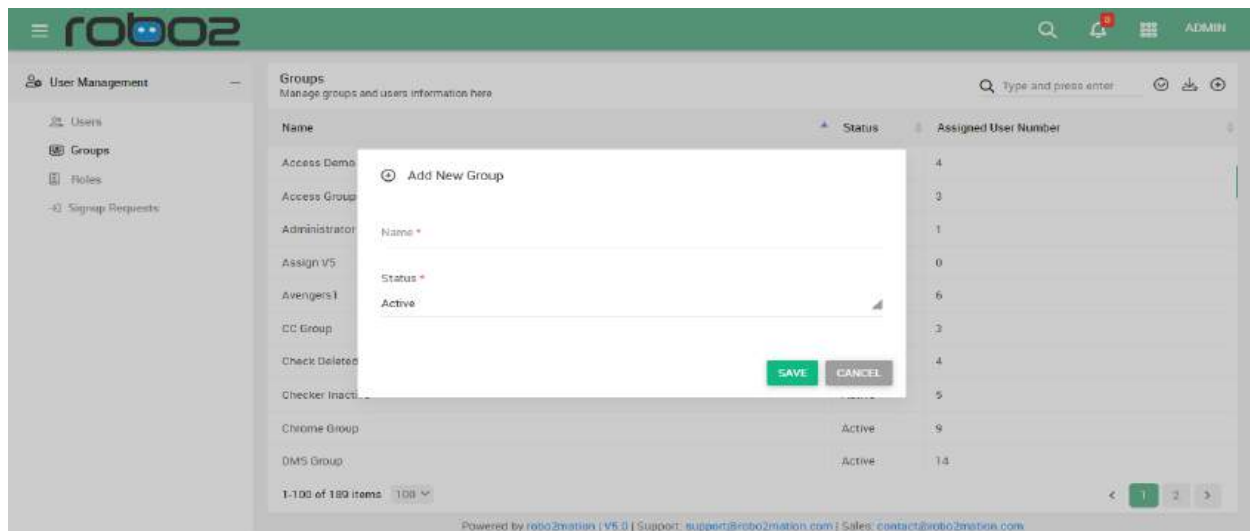

Figure 21: Create Groups

Admin or manage user group can create a group by following steps:

- Navigate to the **Menu → User Management → Groups**.
- In 'Groups', click on the "+" icon.
- Enter a group name.
- Click on the Save button and the group will be created.

## Assign Users to Group

|             |        |                      |  | X 1 Selected |
|-------------|--------|----------------------|--|--------------|
| Name        | Status | Assigned User Number |  |              |
| Access Demo | Active | 4                    |  |              |

Figure 22: Options on selection

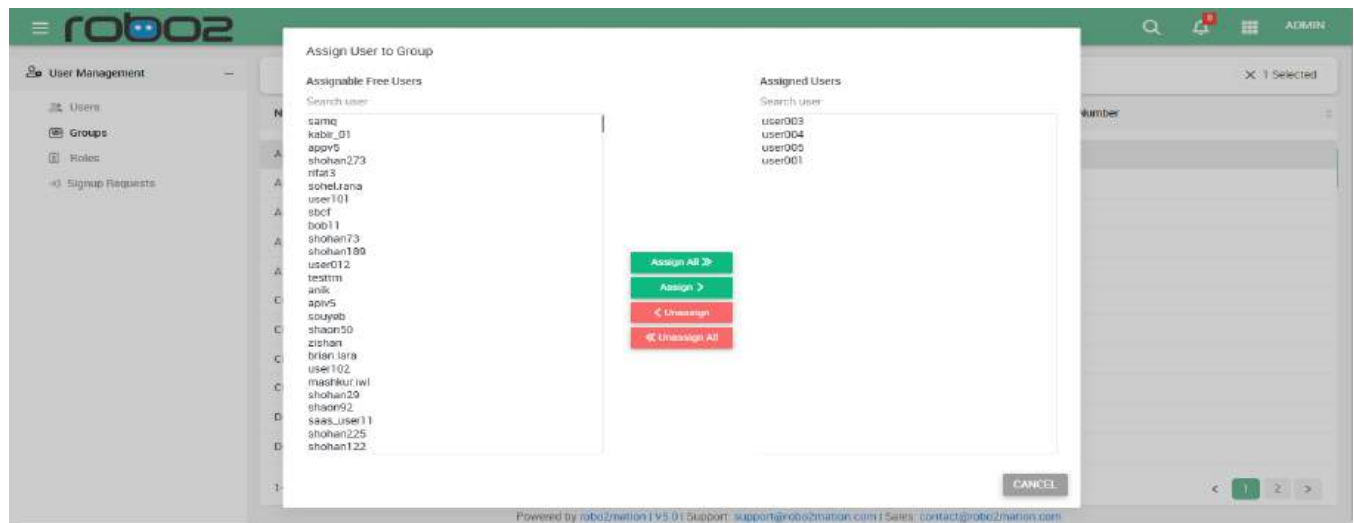

Figure 23: Assign User to group

- Navigate to the **Menu → User Management → Groups**.
- To assign users in any group, select a group.
- Click on the “Assign User” option to select users to assign.
- A “assign users to group” window will pop up.
- Select or search user to assign one or multiple users and click on the “Assign” button.
- The assigned users will be shown on the right side.

## Edit Group

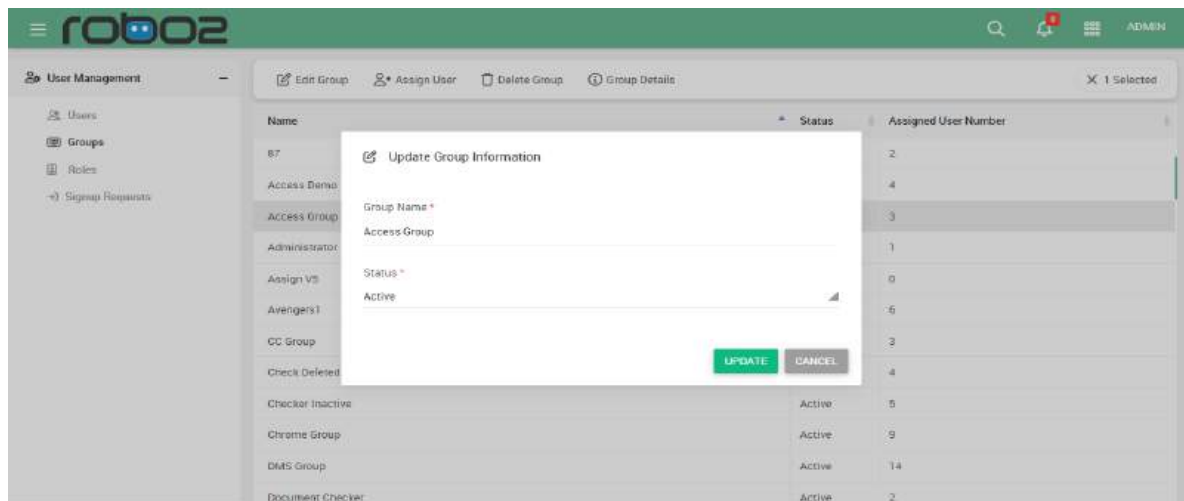

Figure 24: Edit Group

Admin or user with “Manage Group” permission can edit a group by following steps:

- Navigate to the **Menu → User Management → Groups**.
- To edit a group, First select a group to edit by simply clicking on the group name.
- Click on the edit icon (pen icon) to preview group information.
- Edit the fields as necessary and click on the “update” button.
- Group information will be updated.

## Delete Group

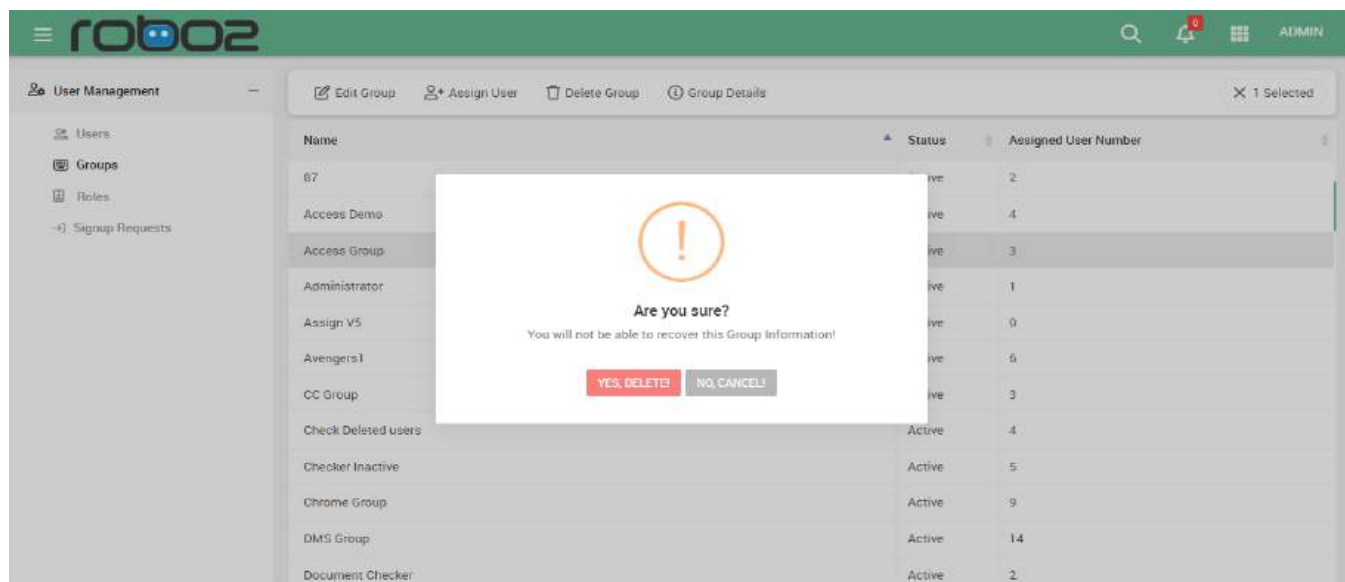

Figure 25: Delete group

Admin or user with “Manage Group” permission can edit a group by following steps:

- Navigate to the **Menu → User Management → Groups**.
- Select a group and click on the “delete” icon.
- A pop-up window will open with the “Yes, Delete” and “No, Cancel” button.
- Click on “Yes, Delete” to delete the group.

## Search Groups from Group List

- Navigate to the **Menu → User Management → Groups**.
- Click on the search bar.
- Matched results will appear upon group name search.

## Column Toggle & Download

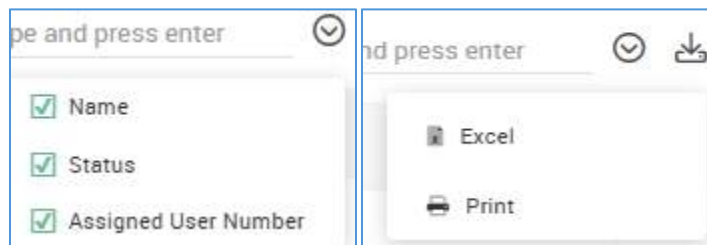

Figure 26: Column toggle & Download

- With the toggle option user can customize the data table columns.
- Only selected columns in toggle option will be displayed in the data table.
- With the Download icon, the data table information will be downloaded in excel format.

## Roles

Roles in the DMS allow administrators to define user permissions and access levels. By creating roles with specific permissions (e.g., view, upload, edit, delete), administrators can control the actions users can perform within the system. This ensures secure and efficient document management by granting access based on user responsibilities.

| Name               | Code                       | Assigned User | Status | API Role |
|--------------------|----------------------------|---------------|--------|----------|
| Admin              | admin                      | 3             | Active | N/A      |
| All API Permission | allApi_permission_d63943a1 | 1             | Active | Yes      |
| All API User       | allApiUser_b4b38835        | 1             | Active | Yes      |
| Branch             | branch_ebf6e109            | 1             | Active | N/A      |
| Checker            | checker_949fe062           | 12            | Active | N/A      |
| CheckerSSF         | checkerssf_a41b7a97        | 1             | Active | N/A      |
| DMS Owner          | dms_owner                  | 0             | Active | N/A      |
| Departments        | departments_06c1957c       | 2             | Active | N/A      |
| Download Only      | download_only_192df36c     | 0             | Active | N/A      |

Figure 27: Roles

## Add Roles

**Update Role Information**

**Name \***  
SharminHuq

**Permissions**

**Core**

- ☐ All Master Table Manager
- ☐ Core Report Manager
- ☐ Create Announcement
- ☐ Manage Branch
- ☐ Manage Department
- ☐ Manage Group
- ☐ Manage Role
- ☐ User Checker

**Workflow**

- ☐ All Process Information
- ☐ Design Process
- ☐ Process Configuration
- ☐ Related Process Information

**UPDATE** **CANCEL**

Figure 28: Add Roles

Admin or user with “Manage Role” permission can add roles by following steps:

- Navigate to the **Menu** → **User Management** → **Roles**.

- From the Roles menu click on the “+” icon to add new roles.
- All permission lists will appear with a role name field.
- To Create API role, check on “API User Role”
- Enter a role name.
- From the permissions list (checkbox menu), select expected action permission and click on save.

## Role Permissions

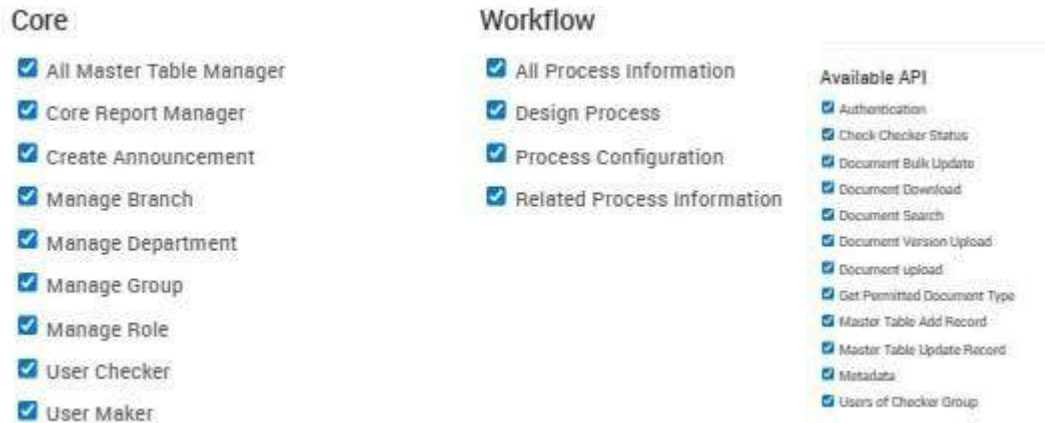

Figure 29: Core, Workflow & API Permissions

A Description of system permissions, API user permissions and Core permissions is given below:

| SL No. | Workflow Permissions        | Description                                                                   |
|--------|-----------------------------|-------------------------------------------------------------------------------|
| 1      | All Process Information     | Users can obtain all system application information via search functionality. |
| 2      | Related Process Information | Allows users to access processes they are involved/assigned in.               |
| 3      | Design Process              | Allows to get access to design a workflow process.                            |
| 4      | Process Configuration       | Enables access for "Process Categories" & "Weekends & Holidays" for workflow. |

| SL No. | Core Permissions         | Description                                                                                                                                                                            |
|--------|--------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 1      | All Master Table Manager | This is a permission to manage master table & all its CRUD operations.                                                                                                                 |
| 2      | Core Report Manager      | Provides all users' core (User Management & API users') report log.                                                                                                                    |
| 3      | Create Announcement      | Provides users access to create announcements.                                                                                                                                         |
| 4      | Manage Branch            | User with “Manage Branch” permission can perform full CRUD (Create, Read, Update, Delete) operations on branches. Also, can assign/unassign users from branch.                         |
| 5      | Manage Department        | User with “Manage Department” permission can perform full CRUD (Create, Read, Update, Delete) operations on departments. Also, can assign/unassign users or managers from departments. |
| 6      | Manage Group             | User with “Manage Groups” permission can perform full CRUD (Create, Read, Update, Delete) operations on groups. Also, can assign/unassign users from groups.                           |

|   |              |                                                                                                                                                                 |
|---|--------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 7 | Manage Role  | User with “Manage Role” permission can perform full CRUD (Create, Read, Update, Delete) operations on roles. Also, can assign/unassign users to specific roles. |
| 8 | User Checker | If a user is assigned the User Checker role, they can review requests submitted by Maker users. The Checker can either approve or reject a request              |
| 9 | User Maker   | If a user is assigned the <b>User Maker</b> role, they can create or update user information by submitting requests for approval.                               |

| SL No. | API Permissions             | Description                                                                                                                            |
|--------|-----------------------------|----------------------------------------------------------------------------------------------------------------------------------------|
| 1      | Authentication              | This endpoint allows users to obtain a token by providing their username and password for authentication.                              |
| 2      | Check Checker Status        | This endpoint makes an HTTP GET request to check if checker feature is enabled for selected document type.                             |
| 3      | Document Bulk Update        | This endpoint is used to update document metadata information in bulk.                                                                 |
| 4      | Document Download           | This endpoint is used to download a document in base64 format by providing the document ID.                                            |
| 5      | Document Search             | This endpoint allows users to search for documents based on specific keywords and search types.                                        |
| 6      | Document upload             | This endpoint makes an HTTP POST request to upload document to the system                                                              |
| 7      | Get Permitted Document Type | This endpoint makes an HTTP GET request to retrieve all permitted list of document types for categorization of the authenticated user. |
| 8      | Metadata                    | This endpoint makes an HTTP GET request to retrieve all metadata of selected document type.                                            |
| 9      | Users of Checker Group      | This endpoint makes an HTTP GET request to retrieve user information from checker groups for a given document type ID.                 |
| 10     | Document Version Upload     | Users can upload document, and each upload will automatically be assigned a version number to track changes.                           |
| 11     | Master Table Add Record     | This is an API permission to add record on specific master table.                                                                      |
| 12     | Master Table Update Record  | This is an API permission to update record on specific master table.                                                                   |

## Assign Users to Role

| <div>  Edit Role          Assign User          Delete Role          Role Details       </div> <div>✕ 1 Selected</div> |         |               |        |          |
|-----------------------------------------------------------------------------------------------------------------------|---------|---------------|--------|----------|
| Name                                                                                                                  | Code    | Assigned User | Status | API Role |
| Corp HR                                                                                                               | HR      | 1             | Active | N/A      |
| Corporate Finance                                                                                                     | corp_hr | 0             | Active | N/A      |

Figure 32: Options on selection

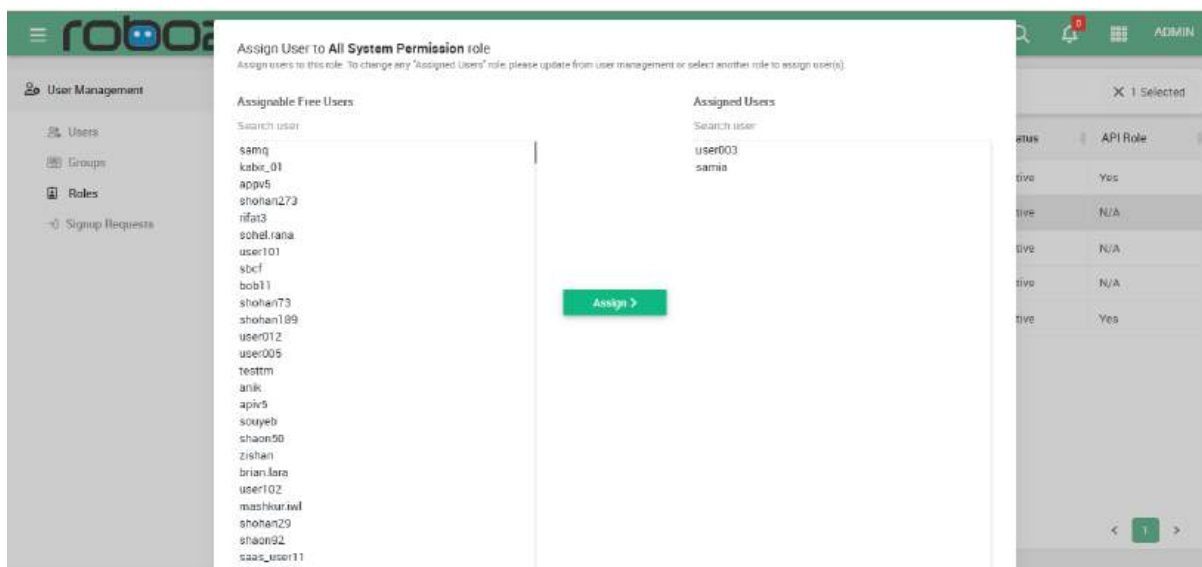

Figure 31: Assign Users to Role

Admin or user with “Manage Role” permission can assign users to roles by following steps:

- Navigate to the **Menu → User Management → Roles**.
- To assign users in any role, select a role.
- Click on the “Assign User” option to select users to assign.
- A “assign users to group” window will pop up.
- Select or search user to assign one or multiple users and click on the “Assign” button.
- The assigned users will be shown on the right side.

## Edit Role

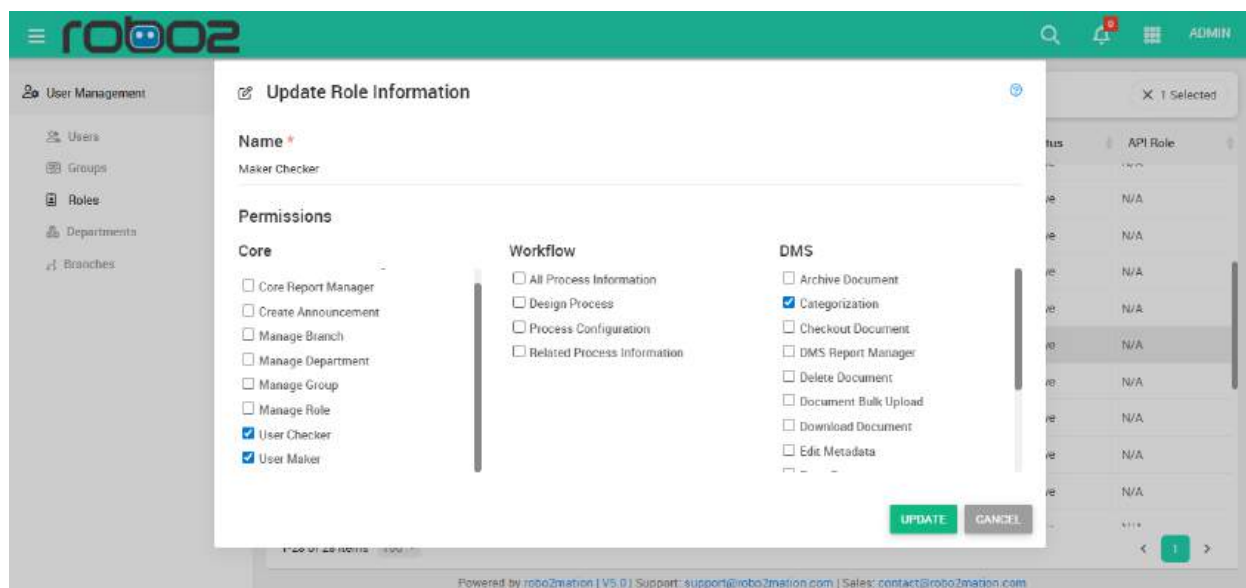

Figure 32: Edit Role

Admin or user with “Manage Role” permission can edit roles by following steps:

- Navigate to the **Menu → User Management → Roles**.

- To edit a role, First select the role to edit by simply clicking on the role name.
- Click on the edit icon (pen icon) to preview group information.
- Edit the fields as necessary and click on the “update” button.
- Roles will be updated, and the page will refresh.

## Delete Role

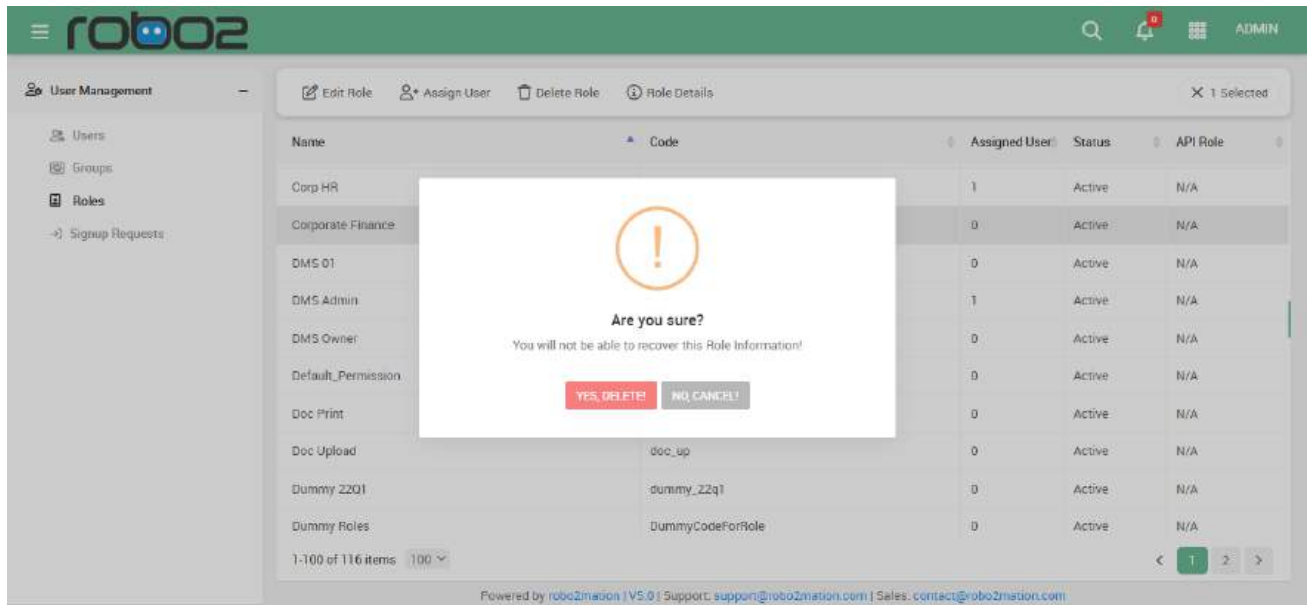

Figure 33: Delete Role

Admin or user with “Manage Role” permission can delete roles by following steps:

- Navigate to the **Menu → User Management → Roles**.
- To delete a role, select role and click on the “delete” icon.
- A pop-up window will open with the “Yes, Delete” and “No, Cancel” button.
- Click on “Yes, Delete” icon to delete the role.

## Column Toggle & Download

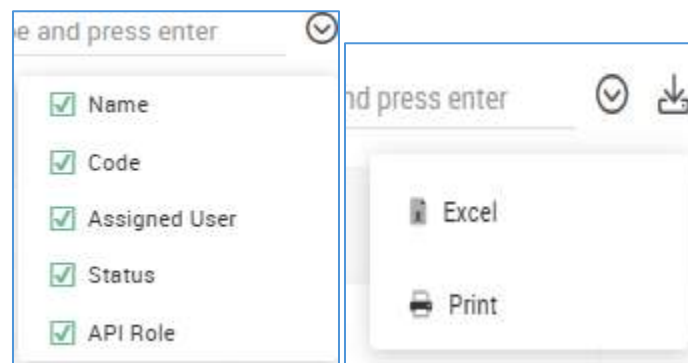

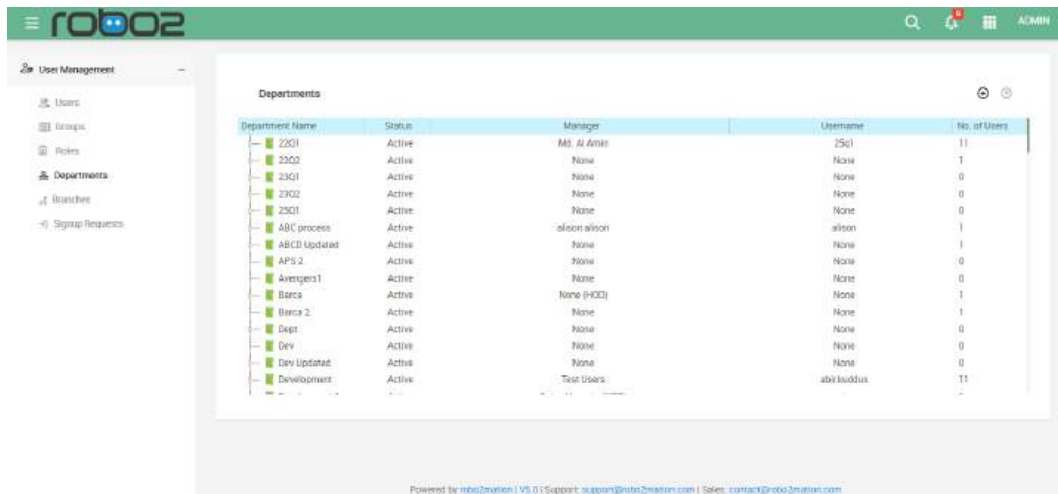

Figure 34: Column toggle & Download

- With the toggle option user can customize the data table columns.
- Only selected columns in toggle option will be displayed in the data table.
- With the Download icon, the data table information will be downloaded in excel format.

## Departments

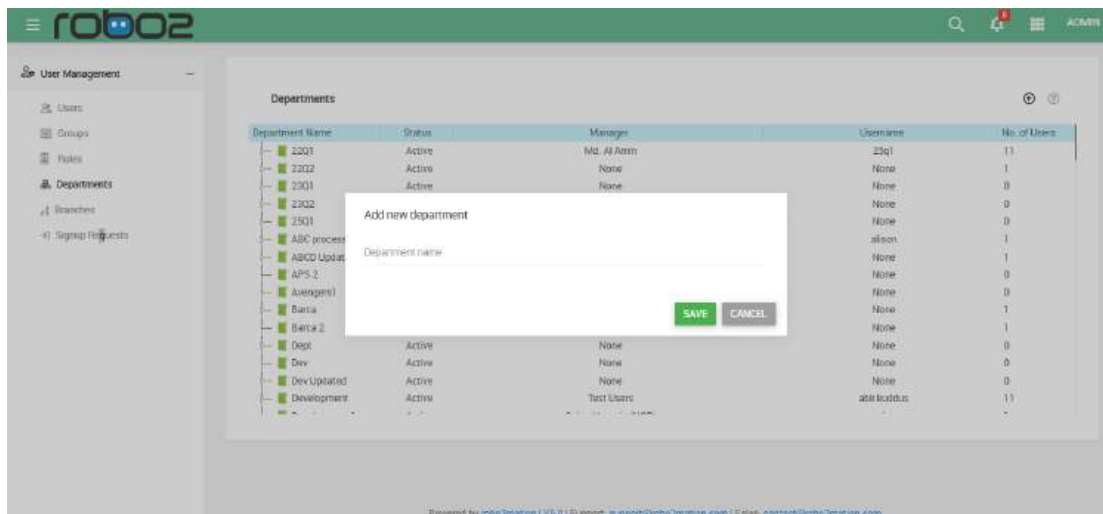

In the **Workflow Management System**, the **department structure** is essential for managing approvals, escalations, and task delegation efficiently. Each department and its sub-departments can be created and configured from the **Department Page**, where managers and Heads of Department (HOD) are assigned. A department can have only **one manager and one HOD**, and in some cases, the manager can also act as the HOD. When an employee initiates an application, such as a **purchase order**, it follows a structured approval process, first reaching their **line manager** before further escalation if needed. To maintain clarity and avoid conflicts, a **user can only be assigned to a single department or sub-department**, ensuring a streamlined workflow with clear responsibilities. Additionally, **managerial and HOD-specific tasks** are integrated within the system, supporting role-based actions and decision-making.

| Department Name | Status | Manager       | Username    | No. of Users |
|-----------------|--------|---------------|-------------|--------------|
| 22Q1            | Active | Md. Al Amin   | 22q1        | 11           |
| 22Q2            | Active | None          | None        | 1            |
| 23Q1            | Active | None          | None        | 0            |

Figure 35: Departments

## Add Departments

Add new department

Department name

SAVE CANCEL

Figure 36: Add Departments

Admin or user with “Manage Department” permission can create a department by following this below steps,

- Navigate to **Menu → User Management → Departments**.
- Click on the add (+) icon to add department.
- Put department name and click on save.

## Add Sub Departments

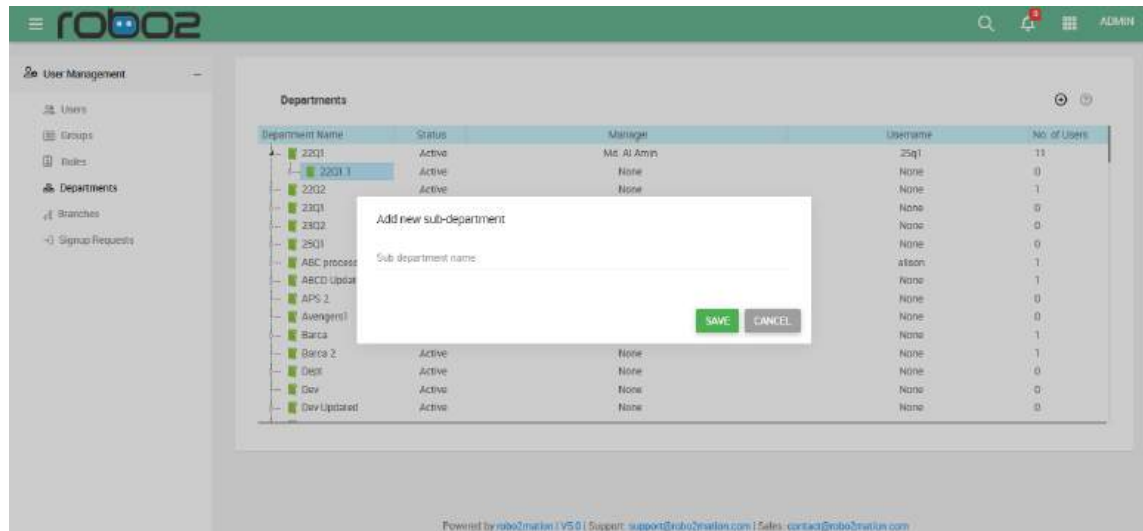

Figure 37: Add Sub Department

To add sub-department, follow the below steps,

- Navigate to **Menu → User Management → Departments**.
- Click on an existing department.
- Click on “sub department”.
- Put sub-department name and click on save.

## Edit Department

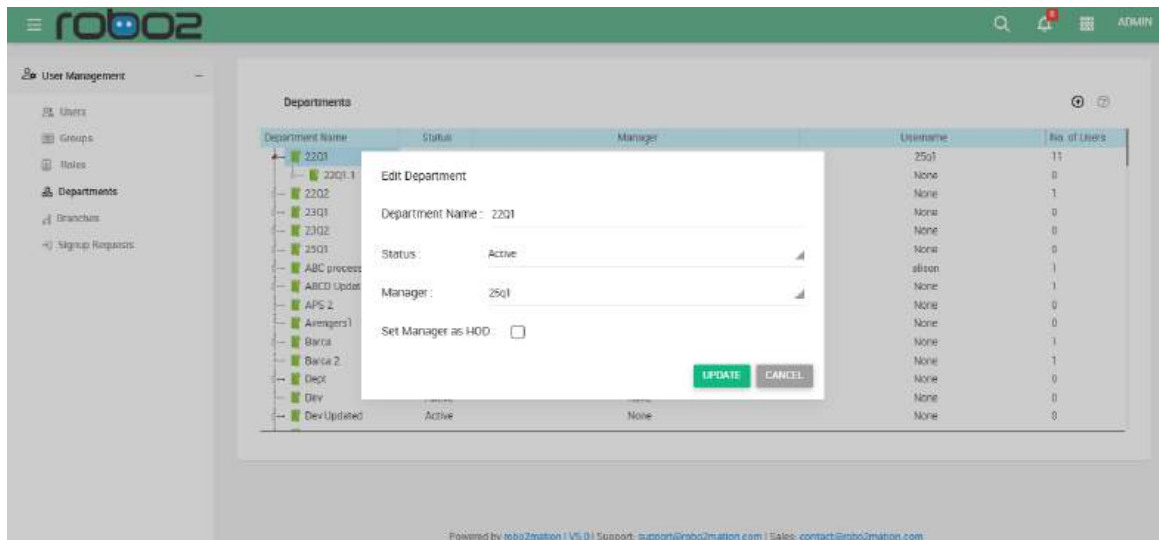

Figure 38: Edit Department

To edit a department information, follow the below steps,

- Navigate to **Menu → User Management → Departments**.
- Click on a department.
- Click on edit department option.
- Edit the required fields.
- Click on “Update”.

## Delete Department

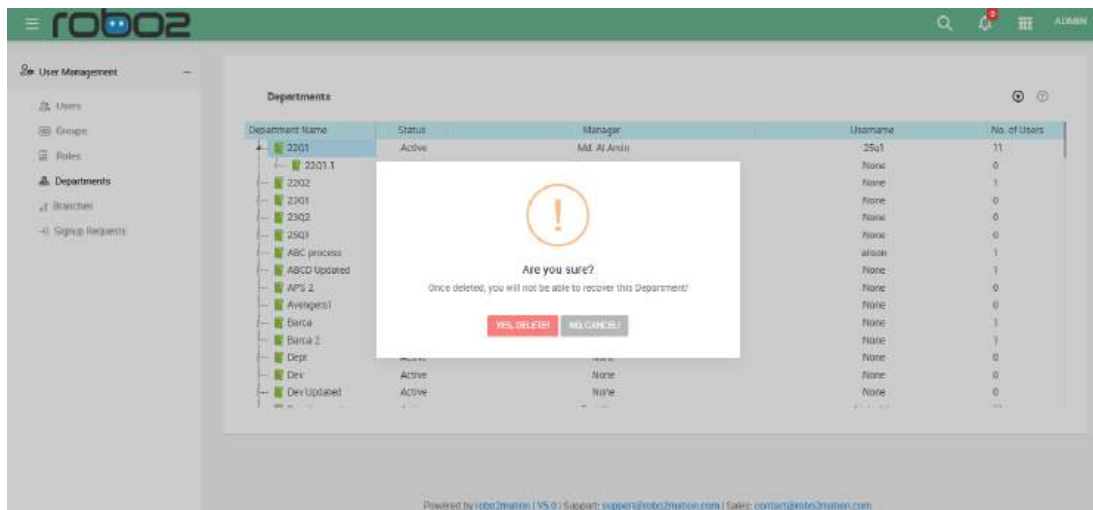

Figure 39: Delete Department

To delete a department, follow the below steps,

- Navigate to **Menu → User Management → Department**.
- Click on a department.
- Click on “Delete”.
- Click on “Yes, Delete!” on the confirmation modal.

## Assign User to Department

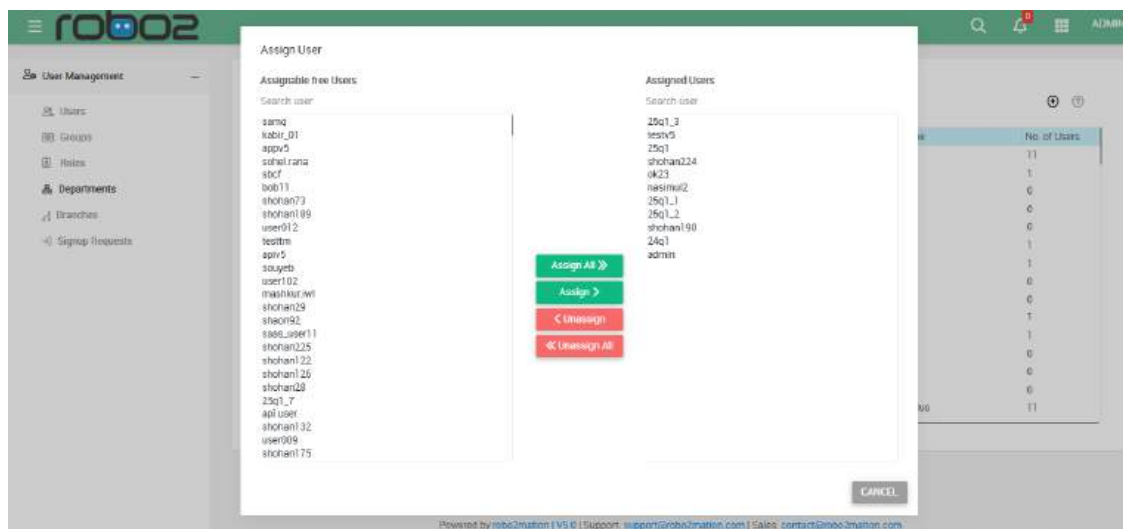

Figure 40: Assign user to department

To assign user to a department or a sub department, follow the below steps,

- Navigate to the **Menu → User Management → Roles**.
- To assign users in any department, select a department.
- Click on the “Assign User” option to select users to assign.
- A “assign users” window will pop up.
- Select or search user to assign one or multiple users and click on the “Assign” button.
- The assigned users will be shown on the right side.

## Branches

Branches can be used to assign users within different parts of an organization, ensuring that employees are grouped and assigned to appropriate tasks or stages of the workflow. This helps structure the workflow process more efficiently, ensuring that the right individuals handle the relevant tasks.

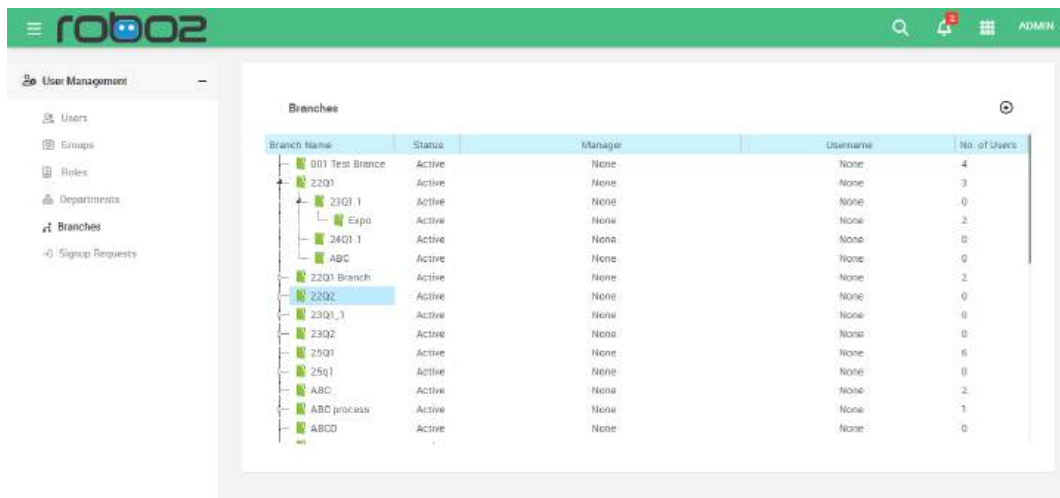

Figure 41: Branch

## Add Branches

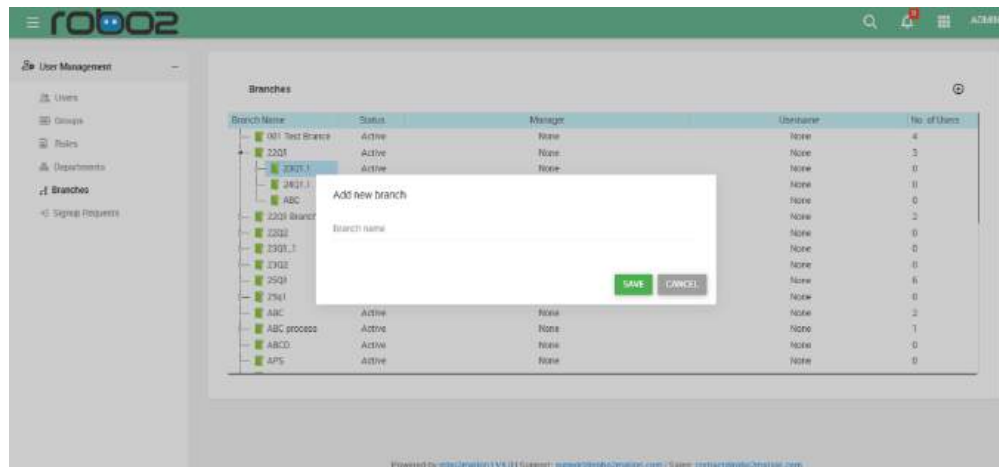

Figure 42: Add Branch

Admin or user with “Manage Branch” permission can create a branch by following this below steps,

- Navigate to **Menu → User Management → Branches**.
- Click on the add (+) icon to add branch.
- Put branch name and click on save.

## Add Sub-Branches

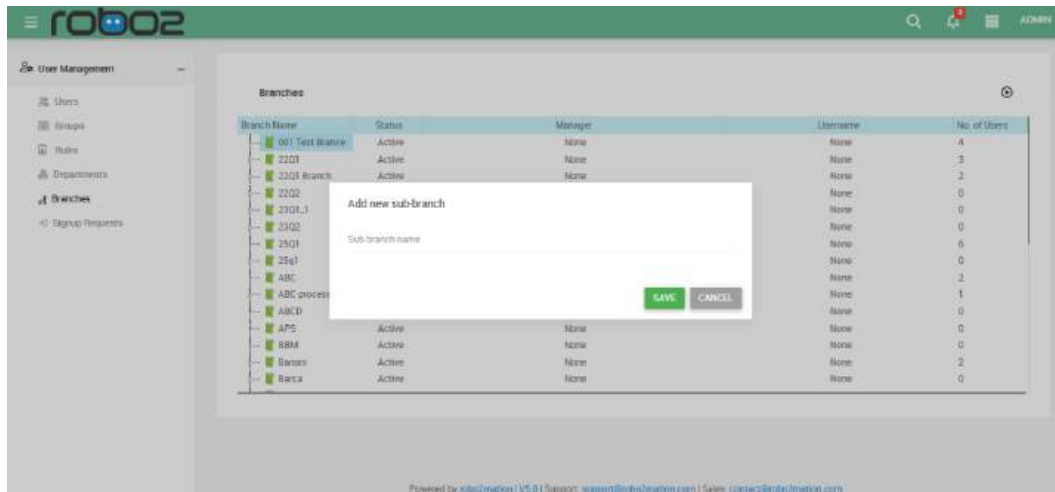

Figure 43: Add Sub-Branch

To add sub- branch, follow the below steps,

- Navigate to **Menu → User Management → Branches**.
- Click on an existing branch.
- Click on “sub branch”.
- Put sub- branch name and click on save.

## Edit Branches

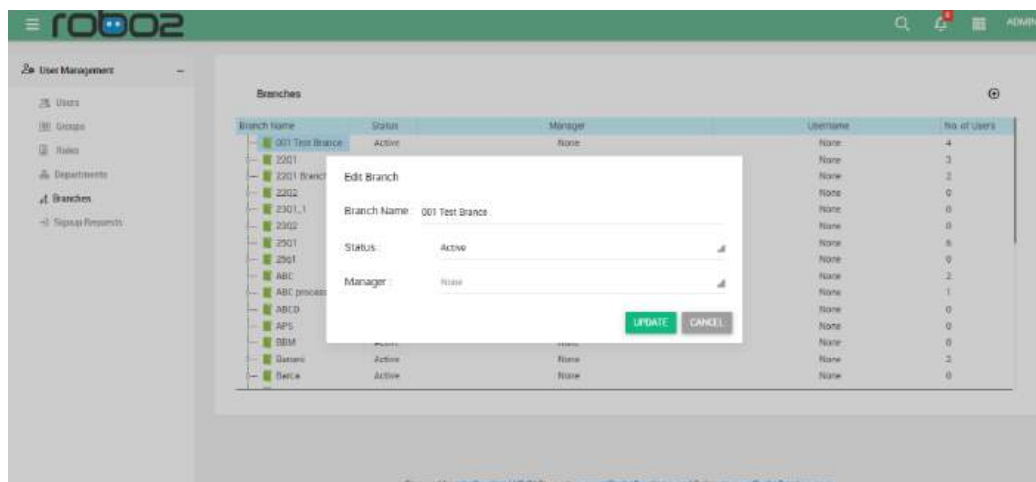

Figure 44: Edit Branch

To edit a branch information, follow the below steps,

- Navigate to **Menu → User Management → Branches**.
- Click on a branch.
- Click on the edit branch option.
- Edit the required fields.
- Click on “Update”.

## Delete Branches

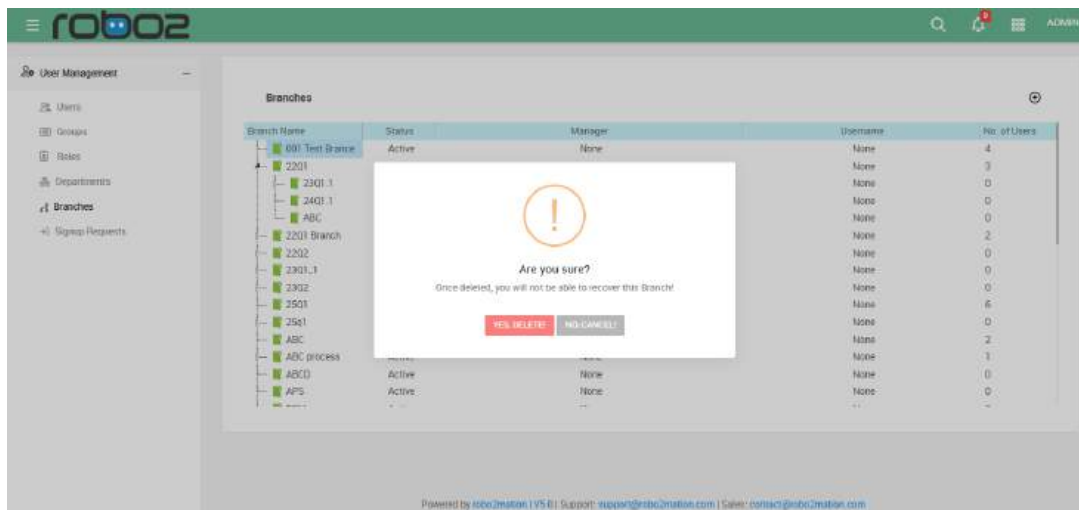

Figure 45: Delete Branch

To delete a branch, follow the below steps,

- Navigate to **Menu → User Management → Branches**.
- Click on a branch.
- Click on “Delete”.
- Click on “Yes, Delete!” on the confirmation modal.

## Assign Users to Branches

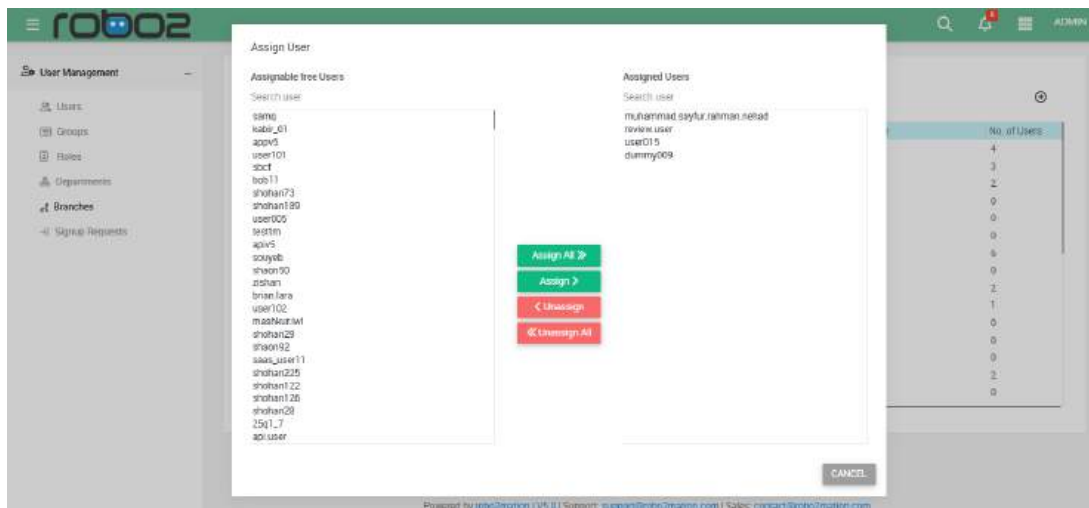

Figure 46: Assign user to branch

To assign user to a branch or a sub branch, follow the below steps,

- Navigate to the **Menu → User Management → Branches**.
- To assign users in any branch, select a branch.
- Click on the “Assign User” option to select users to assign.
- A “assign users” window will pop up.
- Select or search user to assign one or multiple users and click on the “Assign” button.
- The assigned users will be shown on the right side.

## Workflow

### New Application

In the new application page, users are presented with a list of available application processes that they are authorized to initiate. This allows users to easily choose and begin the relevant processes they need to complete.

Only users assigned to the initial task(s) in the process may initiate cases.

- Go to **Menu → Workflow**
- Click on “New Application”
- You will find the entire existing process task list.
- Double click on desired process/application to initiate a new application.
- When the application is opened, the e-Form created for the first task will be displayed. Each application is identified by a unique number called an Application ID.
- Fill all the required field values. This application will be routed to the next user.
- Admin/Permitted Users also can attach documents by clicking on the “ATTACH” button.
- After completing the application form, click on the “SUBMIT” button. Users can also save the draft by clicking on the “save as draft” button.
- After submitting, the user will get a confirmation message with Next Task and Next User information.

Figure 48: E-form for new application

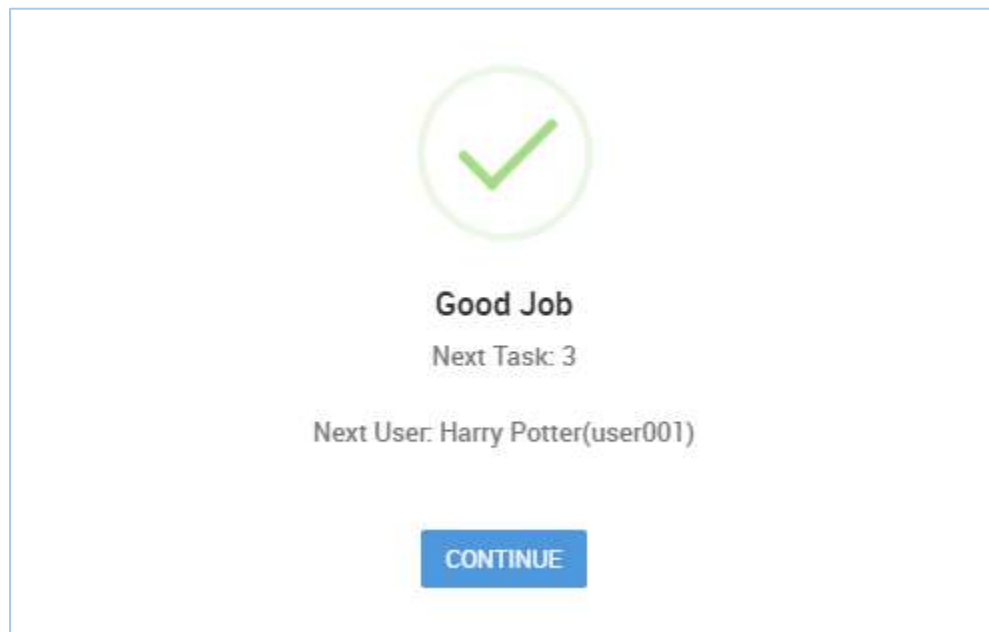

Figure 49: Application submission confirmation

[Note: Submitting application cannot be undone. And on the top right side of the application form, there is an icon to see the application properties, process map and entire comments.]

## Application: Inbox

In the Inbox section, users can view the tasks assigned to them and take necessary actions such as submitting, rechecking, or rejecting the tasks, ensuring timely and appropriate task management.

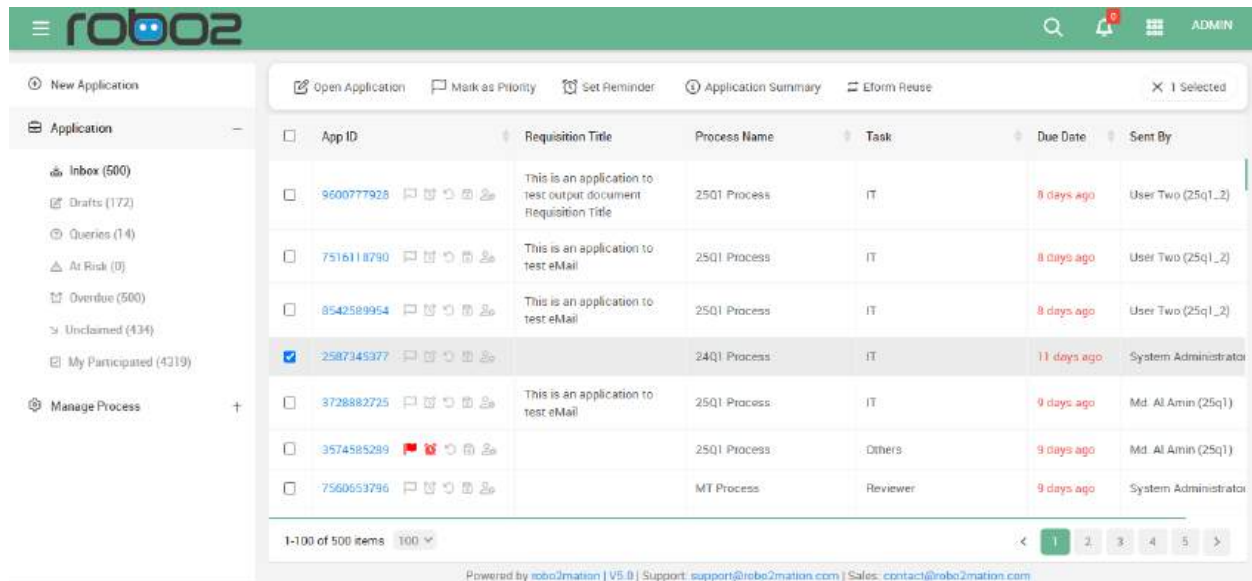

Figure 50: Inbox

In the inbox double click or select and click on “Open Application” to open the application and view the information sent by the previous user.

- Go to **Menu** → **Workflow** → **Inbox**
- Reviewer also can see the application summary by clicking on the “Application Summary” or select an application and click on App ID.
- Reviewer will get the same form as the front user submitted.
- Reviewers should fill the required fields if available.
- Reviewer can also view the uploaded document.
- After finishing review and filling all necessary fields, click on “SUBMIT” button.

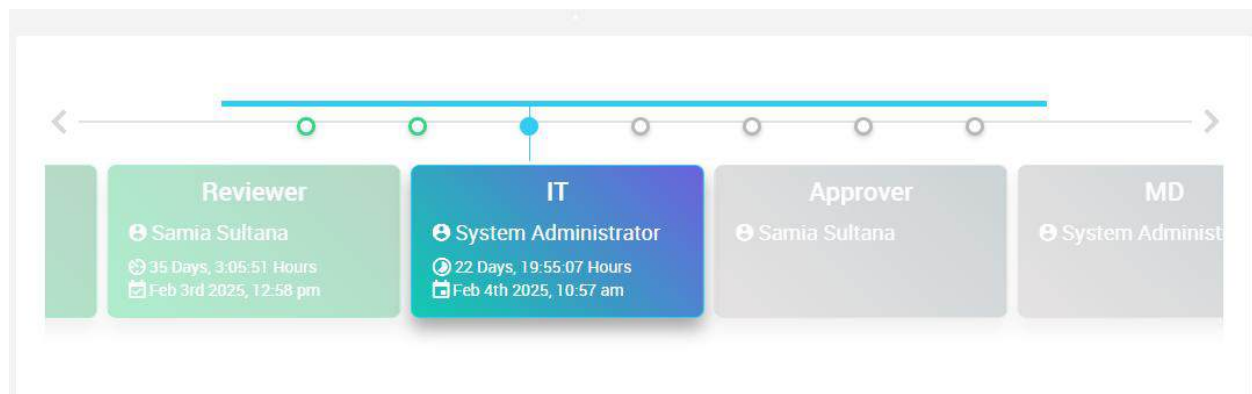

Figure 51: Process Flow

For all devices, the application's process map is user friendly,

- Users can scroll back and forth through the “Process Map”
- Users can click on the forward and backward arrow sign to view “Process Map” step by step
- Users can edit an inbox application and save changes with “SAVE AND CONTINUE” button.
- The saved application form will be in user's inbox and “(saved)” will be displayed beside the Application ID.

**Note:** All fields of an eForm can be edited and be saved except any file attachment.

### Task management options

**Open Application:** Allows the user to view and access the details of the application eForm and take necessary actions like submit, recheck, reject.

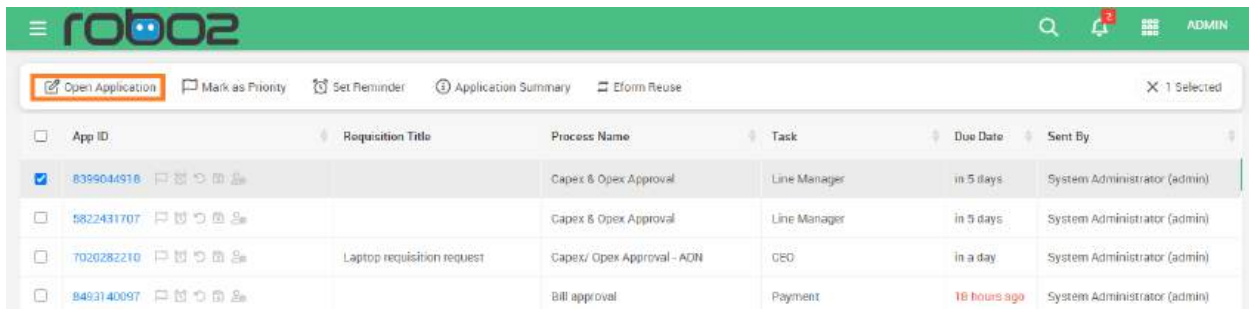

Figure 52: Open Application

Open an application by following the below steps,

- Go to **Menu** → **Workflow** → **Inbox**.
- Select a task and click on the “Open Application” option above the table header.
- Application task will be opened.

**Note:** Inbox applications can also be opened by clicking on the task notification.

**Mark as Priority:** Flags the application as high priority, ensuring it gets immediate attention.

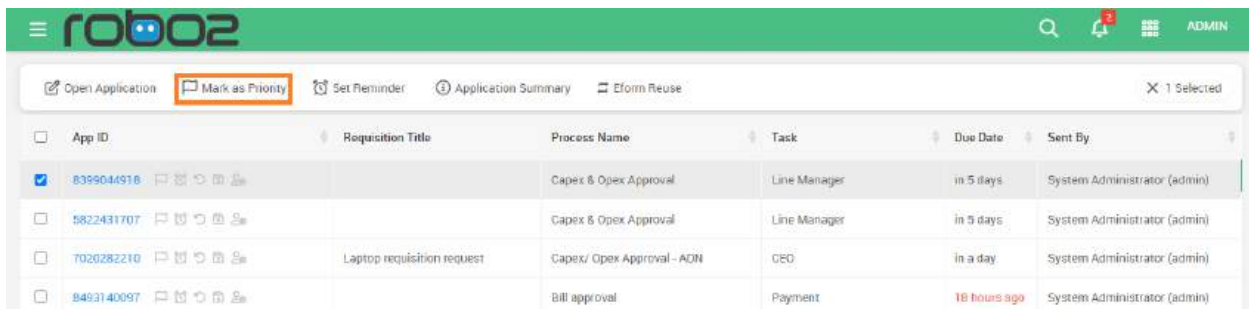

Figure 53: Priority Flag

To set priority flag to an application, users must follow the below steps,

- Select an application to set a priority flag.
- On selection, options will appear on above the table header.
- Click on the “Set as Priority” option.

- Application will be set as a priority, and the flag color will change to red with a system pop up message as “Congratulations!! Priority Set Successfully.”
- To access the priority applications users can filter applications with the priority filter.
- To remove the priority flag, select the application and click on the “Remove Priority” option.
- Priority flag will be removed, and a pop-up message will appear saying “Congratulations!! Priority Removed Successfully.”

**Set Reminder:** Sets a notification or alert to remind the user of an action or deadline for the application.

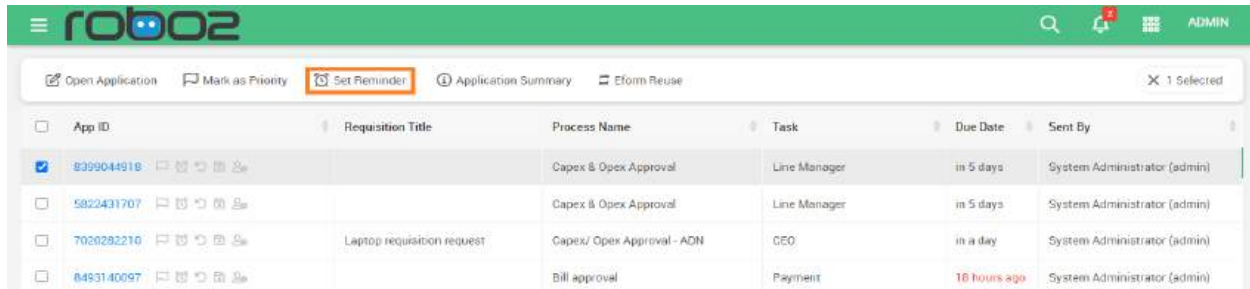

Figure 54: Set Reminder

To set reminder to an application, users must follow the below steps,

- Select an application to set a reminder.
- On selection, options will appear on above the table header.
- Click on the “Set Reminder” option.
- Choose a date from the calendar and to select time, click on the clock icon below and set the time as required and press enter or click on save button to set the reminder.
- The clock icon will be blue after setting the reminder.
- User will get a system notification and a mail notification on the specific date and time of the reminder.

**Application Bulk Submission:** Allows users to submit multiple applications at once.

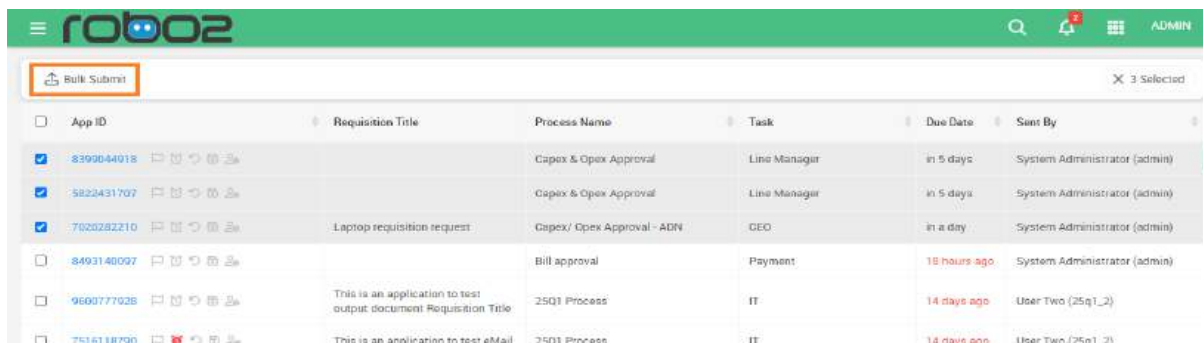

Figure 55: Application Bulk Submission

For application bulk submission, follow the below steps,

- Go to **Menu → Workflow → Inbox**.
- Select the applications for bulk submission. (Upto 100 applications can be selected).
- Click on the “Bulk Submit” option above the table header.
- On the bulk submit modal confirm the bulk submission.
- “Bulk Submission” enabled tasks applications will be submitted successfully.
- Both successful and failed cases will be shown with details.

| Bulk Submission <span>×</span>            |         |                                              |
|-------------------------------------------|---------|----------------------------------------------|
| Total Submitted: 4, Success: 3, Failed: 1 |         |                                              |
| APPLICATION                               | STATUS  | COMMENT                                      |
| 8493140097                                | failed  | Bulk submission is not enabled for this task |
| 5822431707                                | success | Submission completed                         |
| 8399044918                                | success | Submission completed                         |
| 3342769478                                | success | Submission completed                         |

Figure 56: Application Bulk Submission Log

**Note:** Application bulk submission should be enabled from the task configuration otherwise the task won't be submitted, and the system will show the failed submissions.

**Application Summary:** Provides a concise summary of the key details and status of the application.

Figure 58: Application Reuse

## AI Summarization

Generates a concise summary based on the Process content to get an overview of the application. Users can get an overview of the application contents while the task is in the user's inbox.

The screenshot shows the 'Artificial Intelligence Summary' section of the roboo2 application. At the top, the Application ID is 2885560959. Below this, a dark box contains a summary of an employee named Alex Perrish, born on February 2nd, 2025, with a male gender and an office location in BML. The summary also mentions an unspecified salary and CGPA, and that the employee is to be provided with various items and allowances. A note at the bottom of the summary states: '\*\* Summary AI is experimental. Info quality may vary.' Below the summary, there is a section for 'Initiate User Information' with a sub-section for 'Employee Information'. This section contains fields for Employee Name (Alex Perrish), Employee Vision (To digitalize the workflow process globally), Gender (Male, Female, Others), and Date of Birth (2025-02-02). There is also a link for 'Employee Office Details'.

Figure 59: AI Summarization

## Application: Drafts

Draft Applications are unfinished or in-progress application forms that users can save for later completion. These applications are not yet submitted and can be edited or updated before final submission. Drafts allow users to work on applications at their own pace and return to them as needed.

The screenshot shows the 'Drafts' section of the roboo2 application. The left sidebar lists various application categories: Inbox (500), Drafts (172), Queries (14), At Risk (0), Overdue (500), Unclaimed (434), My Participated (4319), and Manage Process. The main area displays a table of draft applications. The table has columns for App ID, Requisition Title, Process Name, Task, Due Date, and Permanently Delete At. The first row is selected, showing App ID 2230461838, MT Process, Initiator, in 3 days, and in 3 months. Below the table, it indicates 1-180 of 172 items. At the bottom, there is a footer with contact information for roboo2mation.

| App ID     | Requisition Title | Process Name  | Task       | Due Date   | Permanently Delete At |
|------------|-------------------|---------------|------------|------------|-----------------------|
| 2230461838 |                   | MT Process    | Initiator  | in 3 days  | in 3 months           |
| 2057547921 |                   | MT Process    | Initiator  | in 3 days  | in 3 months           |
| 19957444   |                   | 25Q1 Process  | Initiator  | in 2 hours | in 3 months           |
| 4179880484 |                   | Bill approval | Front Desk | in 2 hours | in 3 months           |
| 2068172342 |                   | Bill approval | Front Desk | in 2 hours | in 3 months           |
| 4192889221 |                   | 25Q1 Process  | Initiator  | 7 days ago | in 3 months           |
| 4373712609 |                   | MT Process    | Initiator  | 9 days ago | in 3 months           |
| 2074356522 |                   | MT Process    | Initiator  | 9 days ago | in 3 months           |
| 6659790762 |                   | MT Process    | Initiator  | 9 days ago | in 3 months           |

Figure 60: AI Summarization

To access the draft application, follow the below steps,

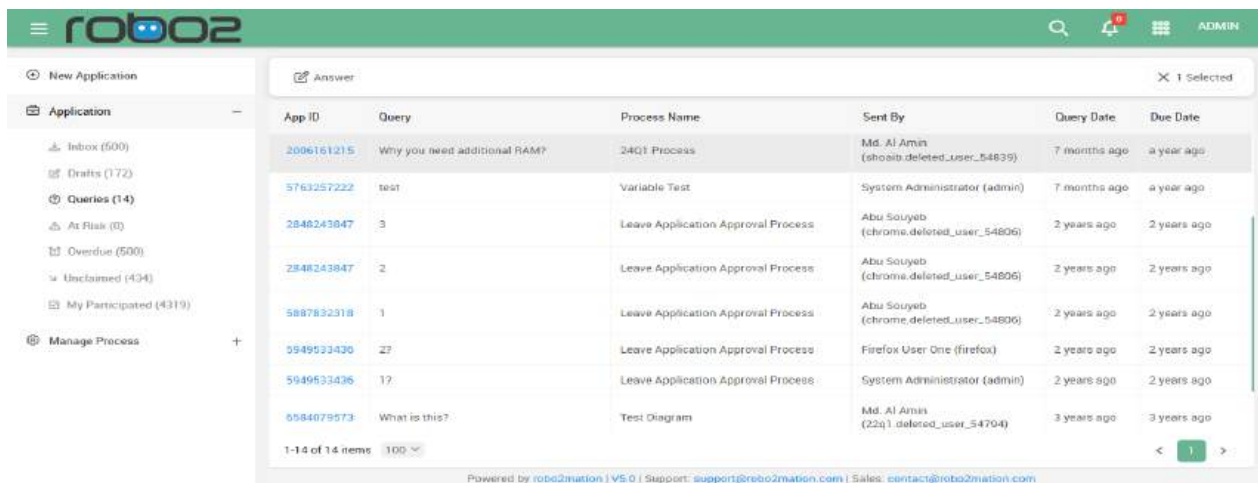

- Go to **Menu** → **Workflow** → **Drafts**.
- In case of not submitting task and saved as draft will be stored in draft option. Drafted application can be workable at any time.
- To open and work with a draft task, just double click on task or select and click on “Open Application”.

- Users can select the checkbox to select which items to delete. (Draft application will be deleted automatically in 90 days).
- Multiple applications can be selected by clicking on the checkbox and then click delete icon to delete.
- Users can also click on the “select all” checkbox which appears after selecting one application checkbox and delete all application at once.
- Users can view the application summary by clicking on the “Application summary” icon.

## Application: Queries

Queries are requests for information made by users to obtain specific details or clarify aspects of a task. In an application process, users can raise a query directed at a specific task owner. The query option allows users to send questions, and they can access and respond to all queries as needed.

Initiator or any participants can query to any user who has participated on an application.

| App ID     | Query                        | Process Name                       | Sent By                                 | Query Date   | Due Date    |
|------------|------------------------------|------------------------------------|-----------------------------------------|--------------|-------------|
| 2096161215 | Why you need additional RAM? | 24Q1 Process                       | Md. Al Amin (shoain.deleted_user_54839) | 7 months ago | a year ago  |
| 5763257222 | test                         | Variable Test                      | System Administrator (admin)            | 7 months ago | a year ago  |
| 2848243847 | 3                            | Leave Application Approval Process | Abu Souyeb (chrome.deleted_user_54806)  | 2 years ago  | 2 years ago |

| 5949533436 | 17                           | Leave Application Approval Process | System Administrator (admin)            | 2 years ago  | 2 years ago |
| 5584879573 | What is this?                | Test Diagram                       | Md. Al Amin (22q1.deleted_user_54704)   | 3 years ago  | 3 years ago |

Figure 61: Application Query List

To access queries, follow the below steps,

- Go to **Menu → Workflow → Queries**.
- Double clicking on the queries will redirect to the application queries and queries can be replied & acknowledged from there.
- Select a query and click on “Answer” to reply or acknowledge a query.

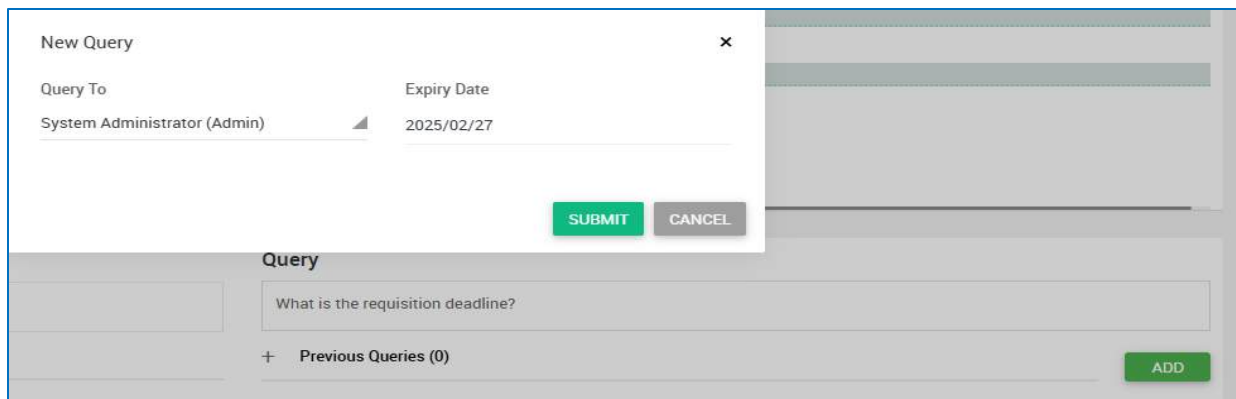

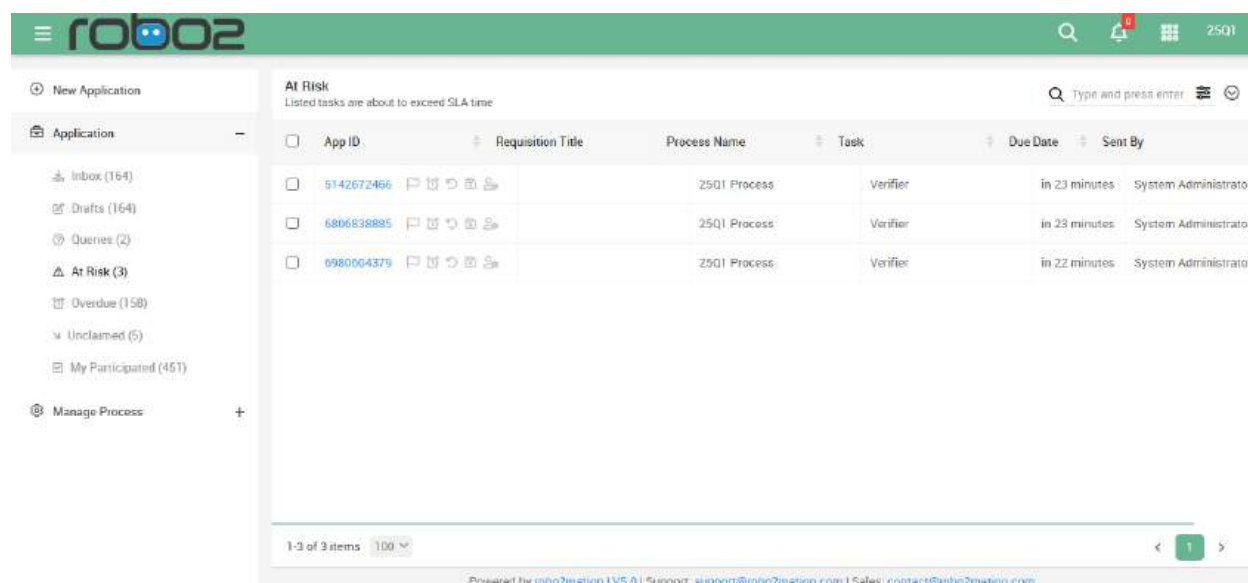

Figure 62: Query from application form

To send a query follow the below steps,

- Open an eForm from the inbox and go to the bottom section.
- Fill up the query textbox with the required queries and click on “ADD”.
- Select the user and query expiration date.
- Click on submit.
- Users can send queries to the assigned users of the process application.
- The sent query can be reviewed, and the user can reply in textbox or acknowledge the query.
- User who sent the query will get the response notification.

## Application: At Risk

Application at Risk indicates that an application is approaching its due date and may become overdue if not completed or addressed promptly. This status serves as a warning that the application is at risk of missing the deadline.

**At Risk**  
Listed tasks are about to exceed SLA time

| App ID     | Requisition Title | Process Name | Task     | Due Date      | Sent By              |
|------------|-------------------|--------------|----------|---------------|----------------------|
| 5142672466 |                   | 25Q1 Process | Verifier | in 23 minutes | System Administrator |
| 6806838885 |                   | 25Q1 Process | Verifier | in 23 minutes | System Administrator |
| 6980004379 |                   | 25Q1 Process | Verifier | in 22 minutes | System Administrator |

Figure 63: Application Risk

Users can see the applications which are at risk, it will show the applications which are on the eleventh hour for the further process.

- Applications on risk will be shown until their due date, after the due date it will go to the overdue folder.
- Users can view the application summary by clicking on the “Application Summary” icon.

## Application: Overdue

Overdue applications refer to applications that have exceeded their expected or predefined processing time. This means they haven't been reviewed, approved, or acted upon within the stipulated deadline.

| App ID     | Requisition Title                                                | Process Name | Task     | Due Date    | Sent By              |
|------------|------------------------------------------------------------------|--------------|----------|-------------|----------------------|
| 960077928  | This is an application to test output document Requisition Title | 25Q1 Process | IT       | 8 days ago  | User Two (25q1_2)    |
| 7516118790 | This is an application to test email                             | 25Q1 Process | IT       | 8 days ago  | User Two (25q1_2)    |
| 8542580054 | This is an application to test email                             | 25Q1 Process | IT       | 8 days ago  | User Two (25q1_2)    |
| 2587340377 |                                                                  | 24Q1 Process | IT       | 11 days ago | System Administrator |

| 3574585289 |                                                                  | 25Q1 Process | Others   | 9 days ago  | Md. Al Amin (25q1)   |
| 7550653796 |                                                                  | MT Process   | Reviewer | 9 days ago  | System Administrator |

Figure 64: Application Overdue

To access the overdue tasks, follow the below steps,

- Go to **Menu** → **Workflow** → **Overdue**.
- Overdue tasks are those which have not been completed on due time.
- Further process for that application can be done from the overdue section.
- Users can see the APP ID, process name, task status, sent by whom and due date of that application.
- Users can view the application summary by clicking on the “Application Summary” icon.

## Overdue tasks auto approve

- In workflow, tasks that are overdue, within a given time frame it can be set to auto approve and can be escalated to the next task (next task user will get email notification too).

**Auto Approval**

☒ Auto Approval

Duration:  Hour(s)

**\*\*Auto Approval is not applicable when:**  
i) Next task's assignment type is **Manual**.  
ii) Application is in **unclaimed** state.

Figure 65: Task Auto-Approval settings

## Application: Unclaimed

Unclaimed Applications are applications that have not yet been acknowledged or taken responsibility for by the assigned user or team. These applications remain pending until a user claims them to take the necessary actions or process them.

| App ID     | Requisition Title | Process Name                       | Task | Due Date     | Sent By                                |
|------------|-------------------|------------------------------------|------|--------------|----------------------------------------|
| 5896213032 |                   | Leave Application Approval Process | IT   | 11 days ago  | Samia Sultana (samia)                  |
| 2163427516 |                   | 23Q1 Process                       | 3    | 9 days ago   | System Administrator (admin)           |
| 4887875108 |                   | 23Q1 Process                       | 2    | 11 days ago  | System Administrator (admin)           |
| 408125255  |                   | 24Q1 Process                       | IT   | 24 days ago  | Edge User One (edge)                   |
| 9483388207 |                   | 24Q1 10                            | 2    | 24 days ago  | System Administrator (admin)           |
| 2412508290 |                   | 24Q1 Process                       | IT   | a month ago  | Abu Souyeb (chrome deleted_user_54800) |
| 5605099488 |                   | email field test                   | 2    | 6 months ago | Samia Sultana (samia)                  |
| 4468375477 |                   | email field test                   | 2    | 6 months ago | Samia Sultana (samia)                  |
| 7960520633 |                   | email field test                   | 2    | 6 months ago | Samia Sultana (samia)                  |

Figure 66: Unclaimed Application

To claim a task, follow the below steps,

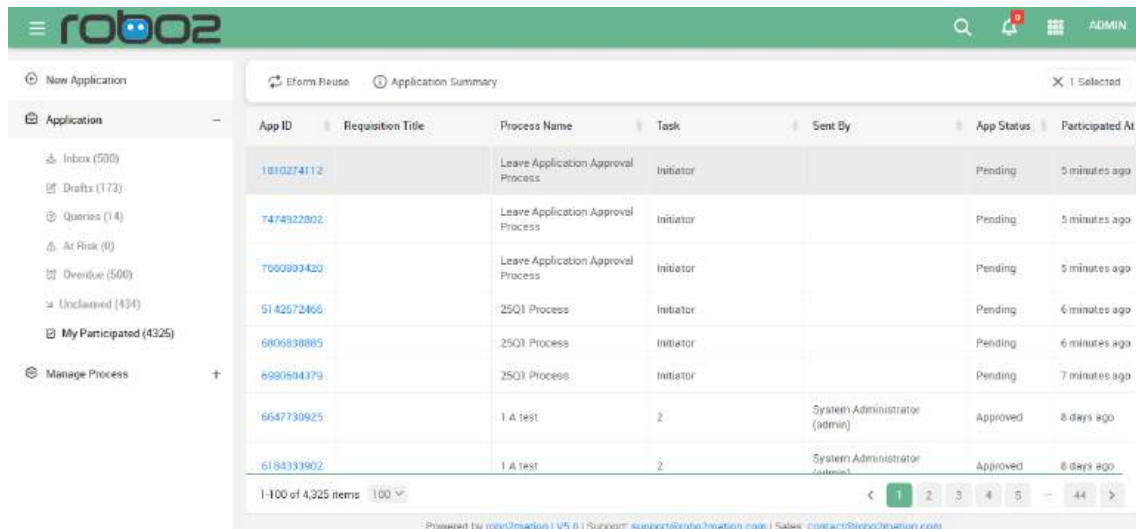

- Go to **Menu** → **Workflow** → **Unclaimed**.
- Click on the unclaimed task and click on “Claim Application” option above the table header.
- Select “YES” on the confirmation modal.
- Task will be claimed and will go to the user’s inbox.
- Users will also get a notification of that claimed task.

To unclaim a task, follow the below steps,

- Select the task from the inbox.
- Click on the “Unclaim” option above the table header.
- Click on yes on the confirmation modal.
- Application will be removed from inbox and will go to the previous users as unclaimed.

## Application: My Participated

This section records all the process steps that a user has participated in, providing a history of their involvement in various tasks or stages.

| App ID     | Requisition Title | Process Name                       | Task      | Sent By                      | App Status | Participated At |
|------------|-------------------|------------------------------------|-----------|------------------------------|------------|-----------------|
| 1810274112 |                   | Leave Application Approval Process | Initiator |                              | Pending    | 5 minutes ago   |
| 7474922802 |                   | Leave Application Approval Process | Initiator |                              | Pending    | 5 minutes ago   |

| 6990594379 |                   | 25Q1 Process                       | Initiator |                              | Pending    | 7 minutes ago   |
| 6647730925 |                   | I & A test                         | 2         | System Administrator (admin) | Approved   | 8 days ago      |
| 6184339602 |                   | I & A test                         | 2         | System Administrator (admin) | Approved   | 8 days ago      |

Figure 67: User's Participated Application Tasks

To access user's participated tasks information, follow the below steps,

- Go to **Menu** → **Workflow** → **My Participated**.
- After submitting each task will be found in "My Participated" page.
- Users can filter applications by process name.
- A user's all initiated applications can be filtered.
- Participated applications can be filtered application status wise (Pending, Approved, Rejected).
- Users can see their initiated application from "Initiator" filter.

## Search Applications

The **Application Search** feature allows users to efficiently find applications using the **Application ID** or any specific **eForm fields**. The search functionality is designed to work in real-time, providing results as users type, enabling quick and accurate access to relevant applications.

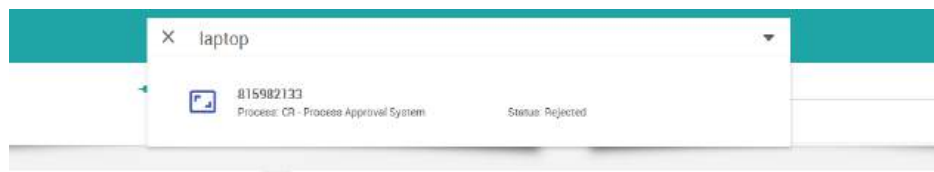

Figure 68: Application Search with eForm keywords

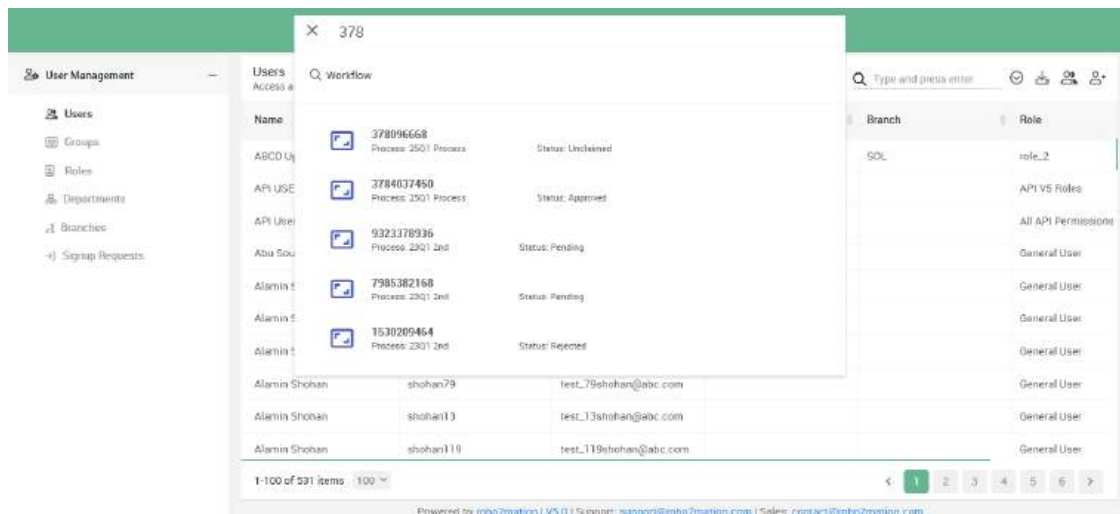

Figure 69: Application Search

- Search with app id or eForm fields just simply click on workflow then you can find the application you want to retrieve.
- Then click on the desired application to see details.
- Users can search an application by eForm field values.
- eForm field values can be numeric, string, date.
- On search, results will display on a process modal.
- Users can access their required application from the list.

## Application Summary

Application summary is where the user will find all general info, uploaded document, output document process map comments and queries. Application summary can be accessed from inbox, at risk, overdue, unclaimed and my participated pages.

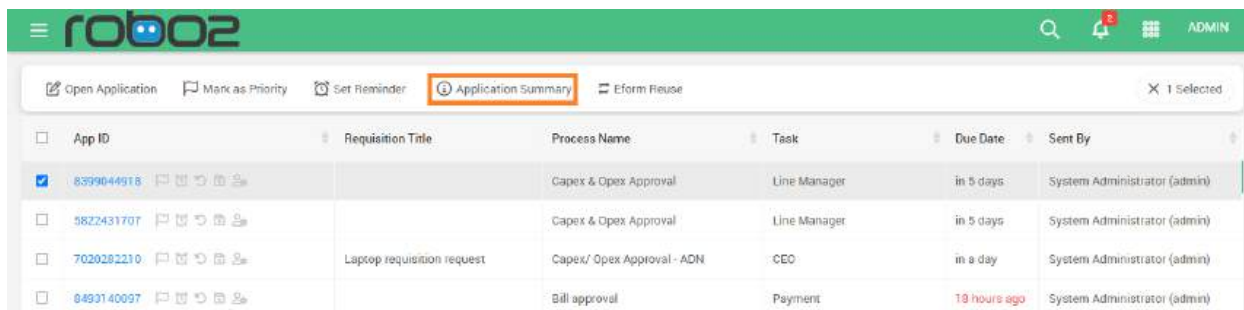

Figure 70: Application Summary

To access application summary, follow the below steps,

- Go to **Menu → Workflow → My Participated**.
- Select an application.
- Click on the “Application Summary” icon.
- Application summary modal will be opened.

Figure 79: Application Queries

- First select an application
- Then click on summary icon to see the application summary
- Then go to Query tab to see the query question and answer log
- Also, can comment using the comment box, users can comment to any users that were assigned on the task.

### Note:

- Without having “Related Process Information” and “All Process Information” permission user can only see their “Queries”.

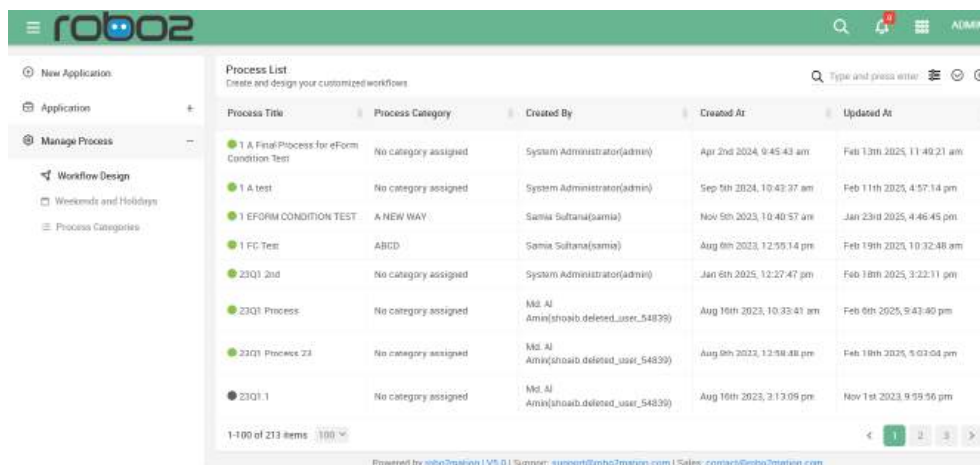

## Manage Process

The **Manage Process** section is a centralized hub for configuring and optimizing workflow operations. It consists of three key components: **Workflow Design**, which allows you to create and customize workflow structures; **Process Categories**, which helps organize and classify workflows for better management; and **Weekends and Holidays**, which enables you to define non-working days to ensure accurate workflow scheduling. Together, these components streamline workflow efficiency and ensure seamless process execution.

### Workflow Design

Admin and permitted users can see all the processes for the workflow management system and navigate as required.

- Go to **Menu** → **Workflow** → **Manage Process**.

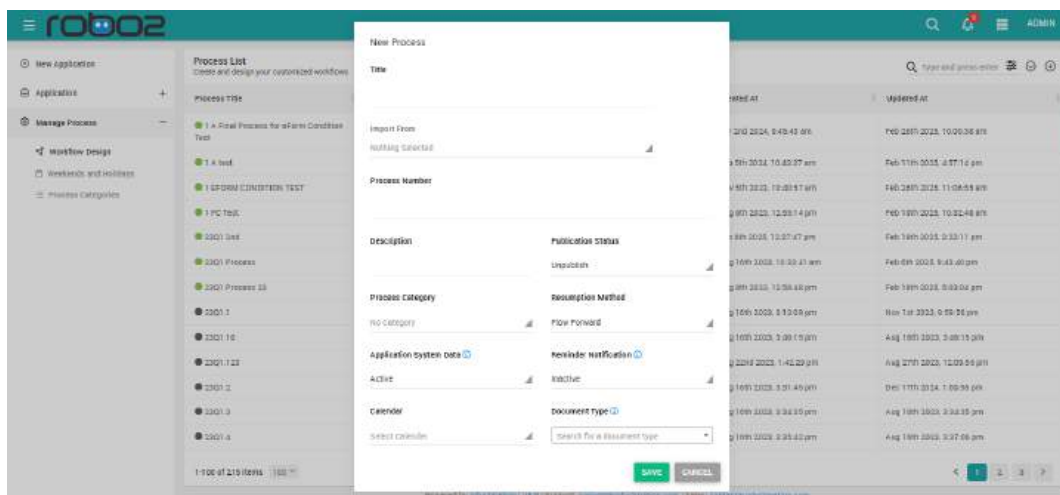

The screenshot displays the 'Manage Process' section of the Robo2 application. On the left, a sidebar menu includes 'New Application', 'Application', 'Manage Process' (selected), 'Workflow Design', 'Weekends and Holidays', and 'Process Categories'. The main area shows a 'Process List' table with columns: Process Title, Process Category, Created By, Created At, and Updated At. The table lists several processes, including '1 A Final Process for eForm Condition Test', '1 A test', '1 EFORM CONDITION TEST', '1 FC Test', '23Q1 2nd', '23Q1 Process', '23Q1 Process 23', and '23Q1.1'. A footer bar indicates '1-100 of 213 items' and provides contact information for Robo2nation.

| Process Title                              | Process Category     | Created By                             | Created At                 | Updated At                 |
|--------------------------------------------|----------------------|----------------------------------------|----------------------------|----------------------------|
| 1 A Final Process for eForm Condition Test | No category assigned | System Administrator(admin)            | Apr 2nd 2024, 9:45:43 am   | Feb 13th 2025, 11:40:21 am |
| 1 A test                                   | No category assigned | System Administrator(admin)            | Sep 5th 2024, 10:42:37 am  | Feb 11th 2025, 4:57:14 pm  |
| 1 EFORM CONDITION TEST                     | A NEW WAY            | Samia Sultana(samia)                   | Nov 5th 2023, 10:40:57 am  | Jan 23rd 2025, 4:46:45 pm  |
| 1 FC Test                                  | ABCD                 | Samia Sultana(samia)                   | Aug 6th 2023, 12:55:14 pm  | Feb 19th 2025, 10:32:48 am |
| 23Q1 2nd                                   | No category assigned | System Administrator(admin)            | Jan 6th 2025, 12:27:47 pm  | Feb 18th 2025, 3:22:11 pm  |
| 23Q1 Process                               | No category assigned | Md. Al Amin(shoaib.deleted_user_54839) | Aug 16th 2023, 10:33:41 am | Feb 6th 2025, 9:43:40 pm   |
| 23Q1 Process 23                            | No category assigned | Md. Al Amin(shoaib.deleted_user_54839) | Aug 6th 2023, 12:58:48 pm  | Feb 18th 2025, 5:02:04 pm  |
| 23Q1.1                                     | No category assigned | Md. Al Amin(shoaib.deleted_user_54839) | Aug 16th 2023, 3:13:09 pm  | Nov 1st 2023, 9:59:56 pm   |

Figure 80: Workflow Design

### Add New Process

To add a new process, follow the below steps,

The screenshot shows the 'New Process' form in the Robo2 application. The form is divided into several sections: 'Time' (with 'Import Date' and 'Routing Calendar'), 'Process Number', 'Description' (with 'Publication Status' set to 'Unpublished'), 'Process Category' (set to 'No category'), 'Application system data' (set to 'Active'), 'Calendar' (set to 'Select calendar'), 'Assignment Method' (set to 'Flow Forward'), 'Reminder Notification' (set to 'Inactive'), and 'Document Type' (with a search bar). The form includes 'SAVE' and 'CANCEL' buttons at the bottom. The background shows the 'Process List' table from Figure 80.

Figure 81: Add New Process

- Go to **Menu → Workflow → Manage Process**.
- Click on the (+) icon to create new process for workflow design.
- Fill all the fields with valid input.
- Title- Enter a proper title for the process.
- Process Number- Enter a process number.
- Description- Enter a proper description for the created process.
- Process category - select a process category from the dropdown option.
- Resumption method - select options from dropdown menu.
- Application system data - If active, application related information will be shown on e-form.
- Reminder notification - If active, then initiator will get an option to set reminder notification on a specific date for his initiated application.
- Import Components:
  - In workflow design page, while creating a new process already created process components can be imported.
  - Users have an option to copy process components from the already created process.
  - Import components are diagrams, eForms, output document templates, email templates.
- Click on save to add a new process.

## Update Process Info

To update a new process, follow the below steps,

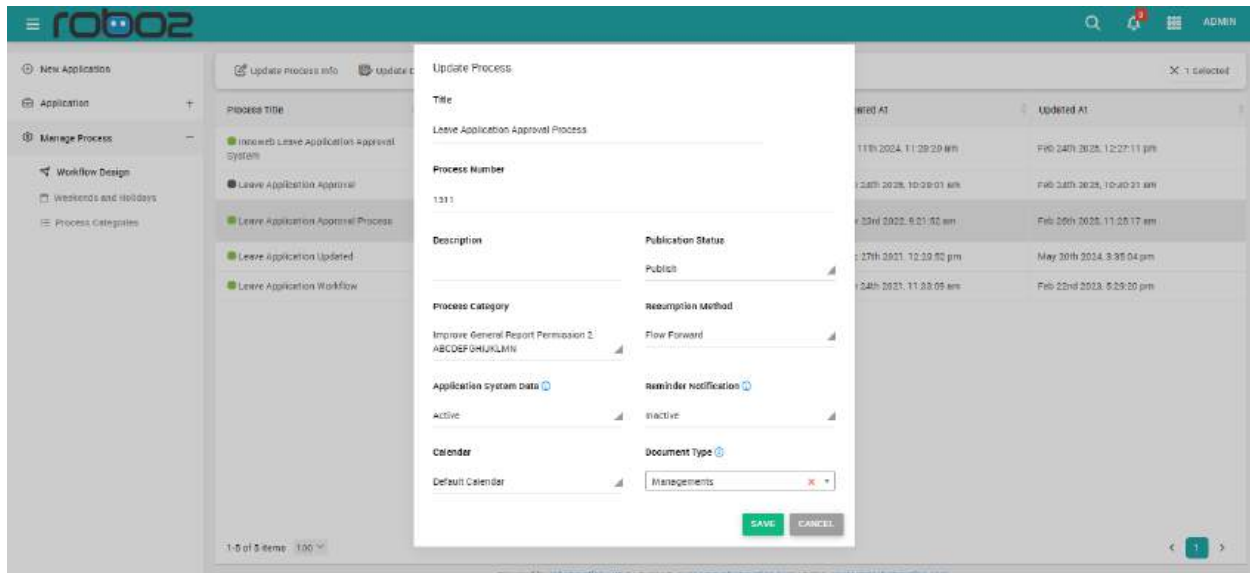

Figure 82: Update New Process

- To update a process, select a process and click on the update icon (pen icon).
- A window will pop up with all the process information.
- Edit the fields as required and click on save changes.
- The edited process will be saved.

## Weekends and Holidays

The **Weekends and Holidays Configuration Panel** is a tool designed to define and manage non-working days within your workflow system. It allows you to set specific weekends and holidays, ensuring accurate scheduling and task timelines.

The screenshot displays the Robo2 Weekends and Holidays Configuration Panel. The interface is divided into a sidebar and a main content area.

**Sidebar:**

- Home
- New Application
- Application
- Manage Process
  - Workflow Design
  - Weekends and Holidays
  - Process Catalogs

**Main Content Area:**

**Calendar List:** A grid of 12 calendar icons, each with a name and a status icon. The calendars are: 2301 Calendar, 2402 Calendar, 2503 Calendar, 2604 Calendar, 2705 Calendar, 2806 Calendar, 2907 Calendar, 3008 Calendar, 3109 Calendar, 3210 Calendar, 3311 Calendar, and 3412 Calendar.

**Default Calendar:** A section for configuring the default calendar. It includes a 'Weekend(s)' section with checkboxes for Monday, Tuesday, Wednesday, Thursday, Friday, Saturday, and Sunday. The 'Friday' checkbox is checked. Below this is a 'Weekdays' section with a table for configuring weekdays.

| Day       | Start Time | End Time | Status |
|-----------|------------|----------|--------|
| Monday    | 9:00 AM    | 6:00 PM  | On     |
| Tuesday   | 9:00 AM    | 6:00 PM  | On     |
| Wednesday | 9:00 AM    | 6:00 PM  | On     |
| Thursday  | 9:00 AM    | 6:00 PM  | On     |
| Friday    | 9:00 AM    | 6:00 PM  | On     |
| Saturday  | 9:00 AM    | 6:00 PM  | Off    |
| Sunday    | 9:00 AM    | 6:00 PM  | Off    |

**Holiday:** A section for configuring holidays. It includes a 'Holidays' table with columns for Date, Description, and Action.

| Date              | Description                       | Action |
|-------------------|-----------------------------------|--------|
| May 27, 2024      | Good Friday                       | Off    |
| May 28, 2024      | Good Friday Holiday               | Off    |
| February 14, 2023 | Valentine's Day                   | Off    |
| July 10, 2022     | Good Friday                       | Off    |
| February 21, 2023 | International Mother Language Day | Off    |

At the bottom of the page, there is a footer with the text: "Powered by robo2 (V1.0) | Support: support@robo2.com | Sales: sales@robo2.com"

Figure 83: Calendar Configuration

**Weekdays**  
Set working time for weekdays.

|           |         |   |         |   |                                     |                          |
|-----------|---------|---|---------|---|-------------------------------------|--------------------------|
| Monday    | 9:00 AM | 🕒 | 6:00 PM | 🕒 | <input checked="" type="checkbox"/> | <input type="checkbox"/> |
| Tuesday   | 9:00 AM | 🕒 | 6:00 PM | 🕒 | <input checked="" type="checkbox"/> | <input type="checkbox"/> |
| Wednesday | 9:00 AM | 🕒 | 6:00 PM | 🕒 | <input checked="" type="checkbox"/> | <input type="checkbox"/> |
| Thursday  | 9:00 AM | 🕒 | 6:00 PM | 🕒 | <input checked="" type="checkbox"/> | <input type="checkbox"/> |
| Sunday    | 9:00 AM | 🕒 | 6:00 PM | 🕒 | <input checked="" type="checkbox"/> | <input type="checkbox"/> |

Figure 84: Weekends

- Users can define Process-wise weekends and holidays.
- Users can simply click on “ADD CALENDAR” and add a calendar name then edit the weekend and holidays as required.
- There is an option to use the system's default weekends and holidays.
- Admin can choose which days will be treated as weekends and weekdays.
- To set weekends and office hours, simply check the box before the weekday.
- Set time according to requirements and click on the save icon to save it.

**Holiday**  
Add or delete the holidays by selecting the dates.

2025-02-26      Description     

**Holidays**

| Date              | Description                       | Action                                |
|-------------------|-----------------------------------|---------------------------------------|
| May 27, 2024      | Test Holiday                      | <input type="button" value="DELETE"/> |
| February 19, 2024 | Expo Special Holiday              | <input type="button" value="DELETE"/> |
| February 14, 2023 | Pohela Falgun                     | <input type="button" value="DELETE"/> |
| July 10, 2022     | Eid Al Adha                       | <input type="button" value="DELETE"/> |
| February 21, 2021 | International Mother language Day | <input type="button" value="DELETE"/> |

Figure 85: Holidays

- For holidays, admin can set any public holiday or required holiday with a date & description and save it.
- To set the holiday select a date and enter a description of the holiday.
- Holidays can be deleted by just one click on delete button.

## Process Categories

**Process Categories** help organize workflow processes by grouping them into specific categories based on their purpose. Users can create different process categories and assign relevant applications to them. For example, finance-related processes like **CapEx/Opex** can be categorized under **Finance**, ensuring better organization, filtering, and management of workflows within the system.

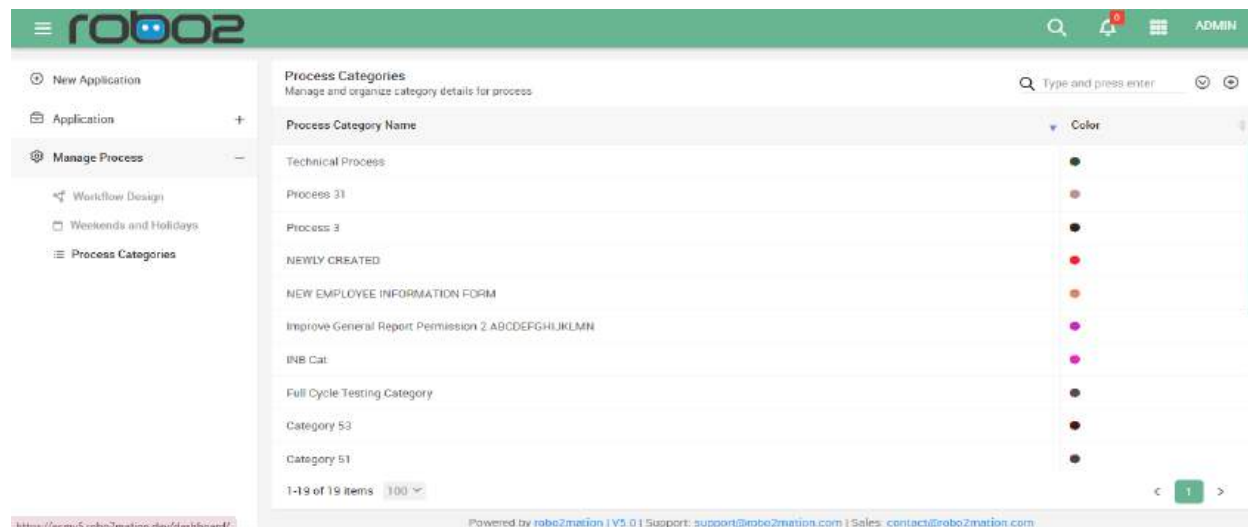

Figure 86: Process Categories

The form is titled 'New Process Category'. It features a 'Title' label followed by a text input field. To the right of the input field is a color selection box. At the bottom right of the form are two buttons: 'SAVE' (green) and 'CANCEL' (grey).

Figure 87: Add Process Category

To update a process category, follow the below steps,

- Go to **Menu** → **Workflow** → **Manage Process** → **Process Categories**.

The form is titled 'Process Category'. It features a 'Title' label followed by a text input field containing the text 'Technical Process'. To the right of the input field is a color selection box. At the bottom right of the form are two buttons: 'SAVE' (green) and 'CANCEL' (grey).

Figure 88: Edit Process Category

To update a process category, follow the below steps,

- Go to **Menu → Workflow → Manage Process → Process Categories.**
- Select a process category.
- Click on the edit category option above the table header.
- Update the process category as required and click on save.

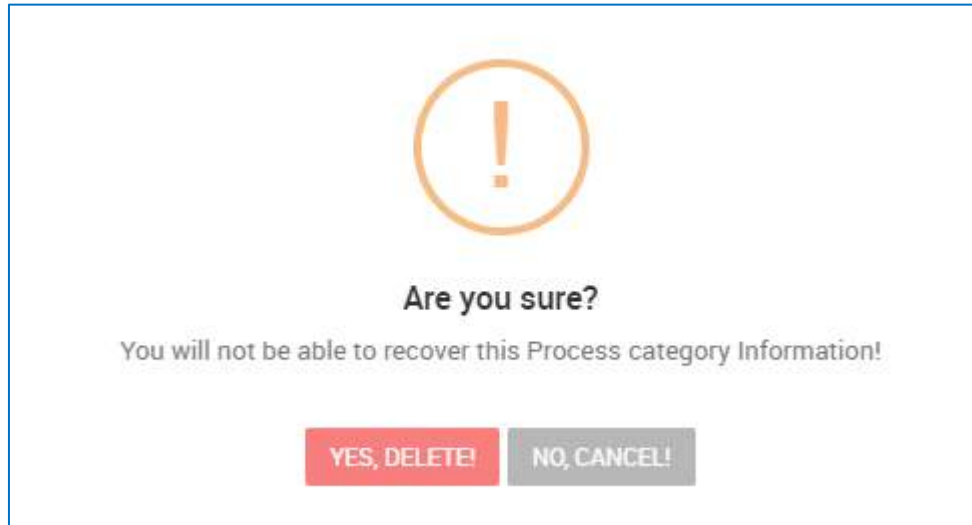

Figure 89: Delete Process Category

To delete a process category, follow the below steps,

- Go to **Menu → Workflow → Manage Process → Process Categories.**
- Click on delete category option.
- Click on “Yes, Delete!”.
- Process Category will be deleted.

## User Options

The **User Options** section provides admin with the flexibility to manage its settings and configure system-level preferences.

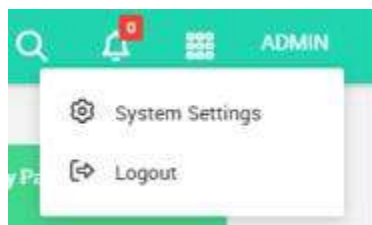

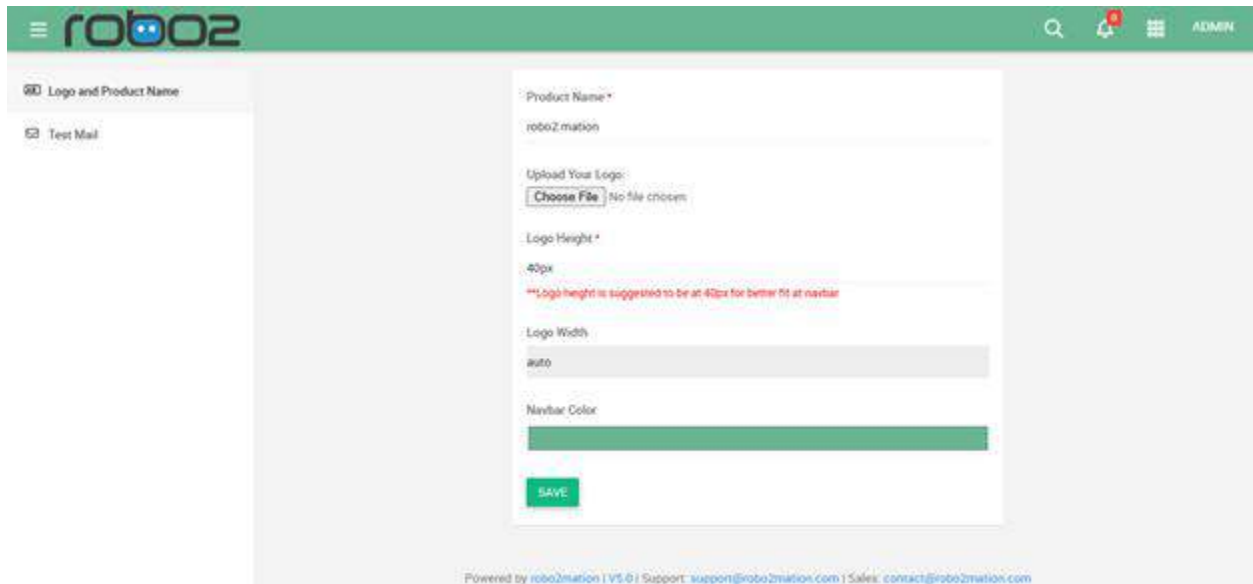

Figure 90: User Options

**System Settings:** This section provides configuration options for system-level settings, ensuring consistent and branded user experience. It includes the following features:

- **Product Name and Logo:** Administrators can set or update the product name and logo, ensuring consistent branding throughout the platform.
- **Test Mail:** This feature allows users to configure and test email settings to ensure successful delivery of system-generated emails, such as notifications and alerts.

## System Settings

### Product Name and Logo

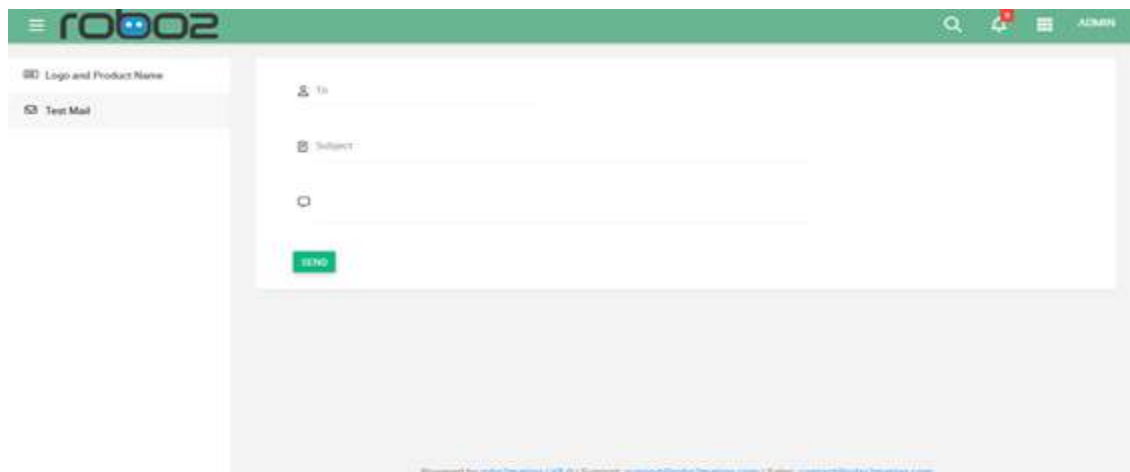

The screenshot shows the 'robo2' admin interface with a green header bar. On the left, a sidebar contains two menu items: 'Logo and Product Name' (selected) and 'Test Mail'. The main content area displays the 'Product Name and Logo' settings form. The form includes a 'Product Name' field with the value 'robo2mation', an 'Upload Your Logo' section with a 'Choose File' button and the text 'No file chosen', a 'Logo Height' field with the value '40px' and a red warning message: '\*\*Logo height is suggested to be at 40px for better fit at navbar', a 'Logo Width' field with the value 'auto', and a 'Navbar Color' field with a green color picker. A green 'SAVE' button is at the bottom of the form. The footer of the page reads: 'Powered by robo2mation | V5.0 | Support: support@robo2mation.com | Sales: contact@robo2mation.com'.

Figure 91: Product Name and Logo

To access system logo and product name follow the below steps,

- Click on username.
- Click on “System Settings”.
- Make necessary changes in Product Name, Logo, Navbar color as required.
- Click “SAVE”.

### Test Mail

The screenshot shows the 'robo2' admin interface with the 'Test Mail' form selected in the sidebar. The main content area displays the 'Test Mail' form, which includes fields for 'To', 'Subject', and a large text area for the email body. A green 'SEND' button is located at the bottom of the form. The footer of the page reads: 'Powered by robo2mation | V5.0 | Support: support@robo2mation.com | Sales: contact@robo2mation.com'.

Figure 92: Test Mail

The Announcement Page keeps users informed with important updates, news, and events. It allows users to view details and search for specific posts. Admins can create, edit, and manage announcements, ensuring relevant information reaches the right users.

- Go to “Admin” → “Announcement”.
- Announcement list will be shows and clicking on the subject line the full announcement will open in a modal.
- We can search announcement with the subject.

Figure 94: Create Announcement

- To create an announcement, click on “+” icon
- We can select target audience by ‘user’, ‘group’ or ‘all user’
- Should write what we want to announce under the announcement box
- After writing the announcement simply click on send button
- Announcement will be sent to the selected target audience
- At the bottom section the permitted announcements will also be shown.

## Requested Downloads

The Requested Downloads Page provides users with access to all their requested data table downloads. It displays the report title and download link allowing users to download completed files and track their download history in a centralized location.

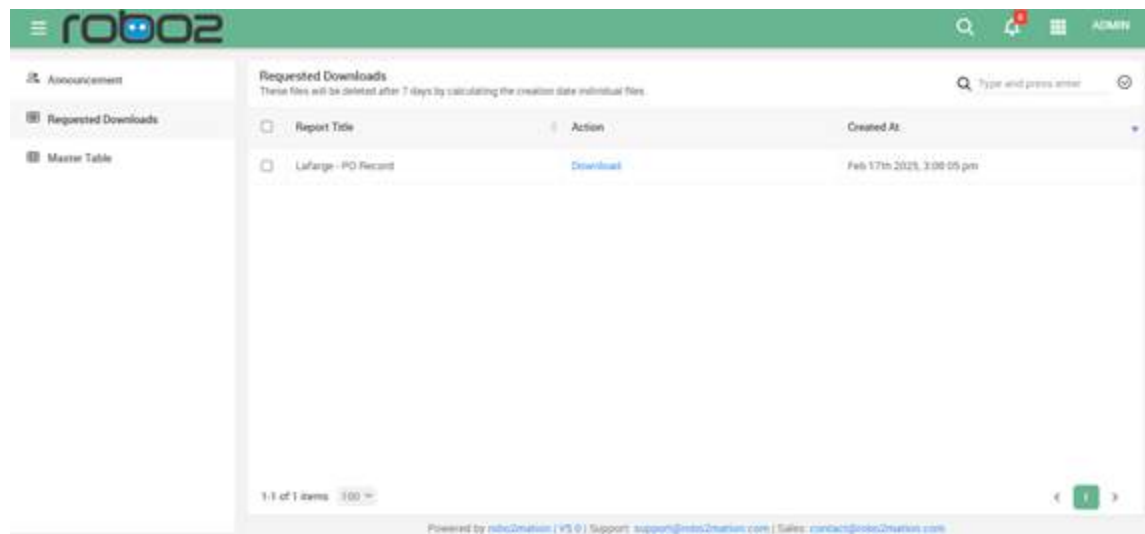

Figure 95: Requested Downloads

To access Requested Downloads, follow the below steps,

- Navigate to **Menu → More → Requested Downloads**.
- Once files are generated, it'll display on the requested downloads page with a downloadable link.
- Click on the download option and required records will be downloaded.

## Master Table

The Master Table is a centralized repository that stores and manages key data for various workflows. It serves as the primary source for maintaining consistent and organized information, enabling users to efficiently perform tasks such as adding, updating, or deleting records. The master table ensures data integrity and supports streamlined processes across different systems and operations.

The screenshot shows the 'Master Table' management interface in the robo2 system. The interface includes a sidebar with 'Announcement', 'Requested Downloads', and 'Master Table' (selected). The main area displays a table with columns: Name, Description, Created By, and Created At. The table lists five master tables: Invoices, Customers, Products, Orders, and Users. Each entry includes a brief description and the key columns it contains. At the bottom, it indicates '1-39 of 39 items' and '100' items per page. The footer shows the system is powered by robo2mation | V5.0 | with support and sales contact information.

| Name      | Description                                                                                                                                                     | Created By         | Created At |
|-----------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------|------------|
| Invoices  | Records billing details for products or services provided to customers. Key Columns: Invoice_ID, Order_ID, Invoice_Date, Total_Amount, Payment_Status           | FC Tester (testv5) | 2025-02-10 |
| Customers | Maintains details about customers, including personal and contact information. Key Columns: Customer_ID, Name, Email, Phone, Address                            | FC Tester (testv5) | 2025-02-10 |
| Products  | Contains information about products or services offered by a company. Key Columns: Product_ID, Product_Name, Category, Price, Stock, Quantity                   | FC Tester (testv5) | 2025-02-10 |
| Orders    | Tracks customer orders, including order status, payment details, and shipping information. Key Columns: Order_ID, Customer_ID, Order_Date, Status, Total_Amount | FC Tester (testv5) | 2025-02-10 |
| Users     | Stores information about system users, including login credentials, roles, and user profile details. Key Columns: User_ID, Username, Email, Role, Status        | FC Tester (testv5) | 2025-02-10 |

Figure 96: Master Tables

## Master Table Contents

### Create Master Table

The screenshot shows the 'Master Table' management interface with a 'Create Master Table' modal dialog open. The modal has fields for 'Name\*' and 'Description', and 'SAVE' and 'CANCEL' buttons. The background table is dimmed, showing the same list of master tables as in Figure 96. The footer information is also visible.

Figure 97: Add Master Table

To create a master table, follow the below steps,

- Navigate to **Menu** → **More** → **Master Table**.
- Click on the add (+) icon to add new master table.
- Input Name and Description.
- Click on save.

## Edit Master Table

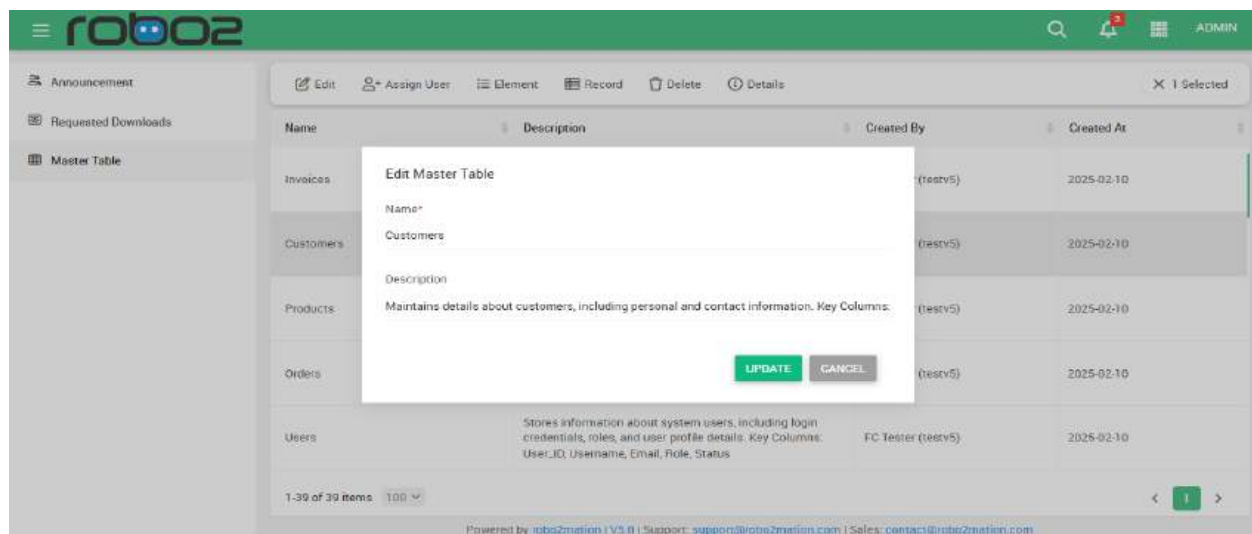

Figure 98: Edit Master Table

To create a master table, follow the below steps,

- Navigate to **Menu** → **More** → **Master Table**.
- Select a master table and options will be available above the table header.
- Click on the edit icon to edit new master table information.
- Update Name and Description accordingly.
- Click on update.

## Assign User to Master Table

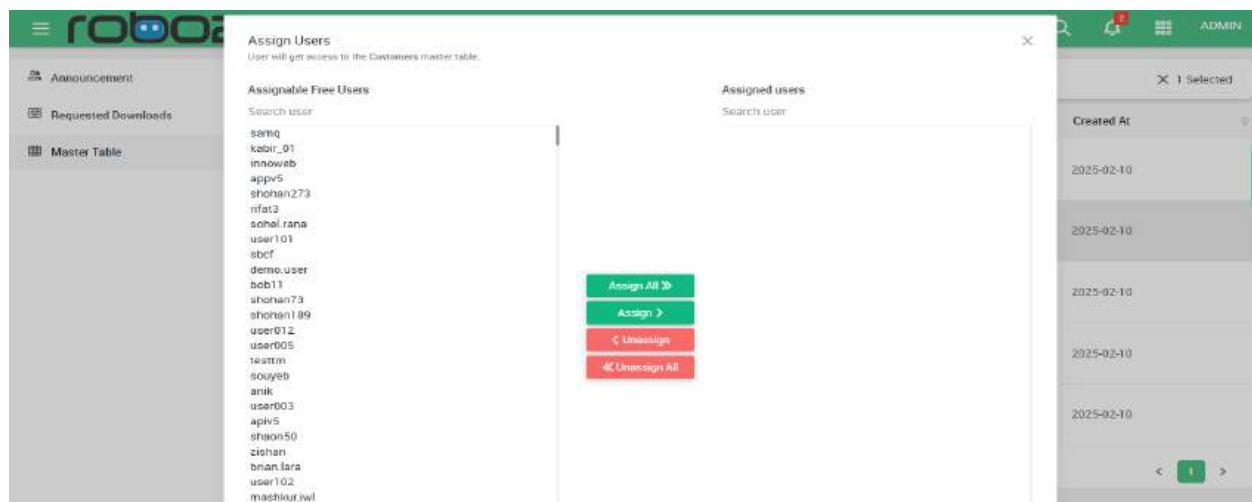

Figure 99: Assign user to master table

To give users access to a specific master table follow the below steps,

- Navigate to **Menu** → **More** → **Master Table**.
- Select a master table and options will be available above the table header.
- Click on the Assign user icon to assign users to access specific master tables.
- Select and assign users by clicking on assign button.
- Close the modal and user assignment will be saved.

## Delete Master Table

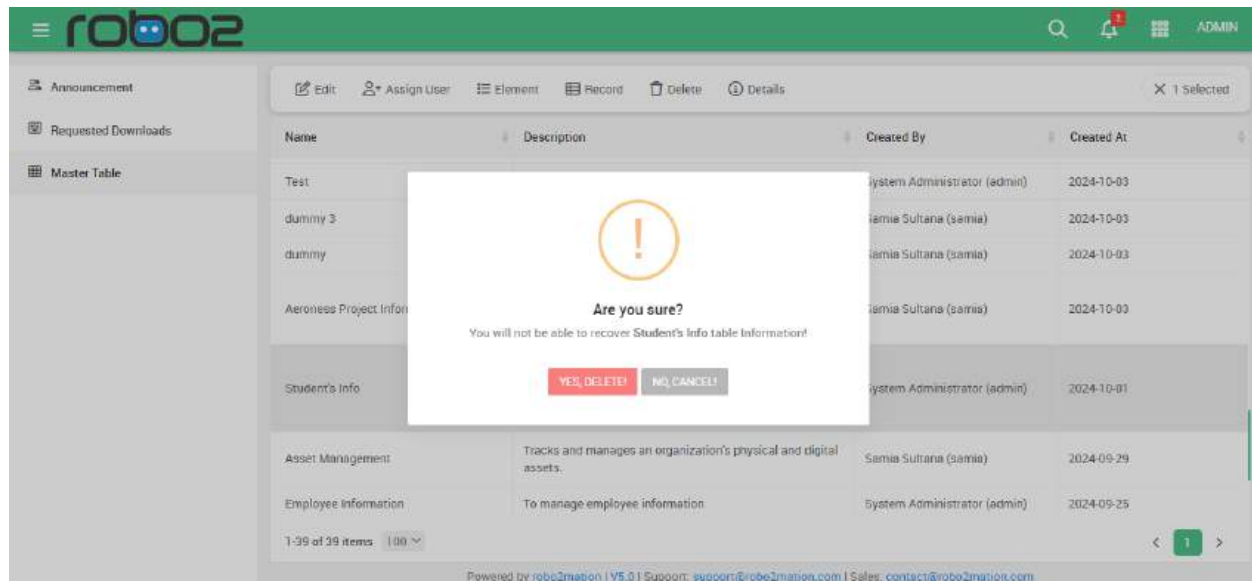

Figure 100: Delete Master Table

To delete a master table information, follow the below steps,

- Navigate to **Menu → More → Master Table**.
- Select a master table and options will be available above the table header.
- Click on the delete icon to delete a master table information.
- Click on “Yes, Delete” on the confirmation modal and table will be deleted.

## Search, toggle and Download

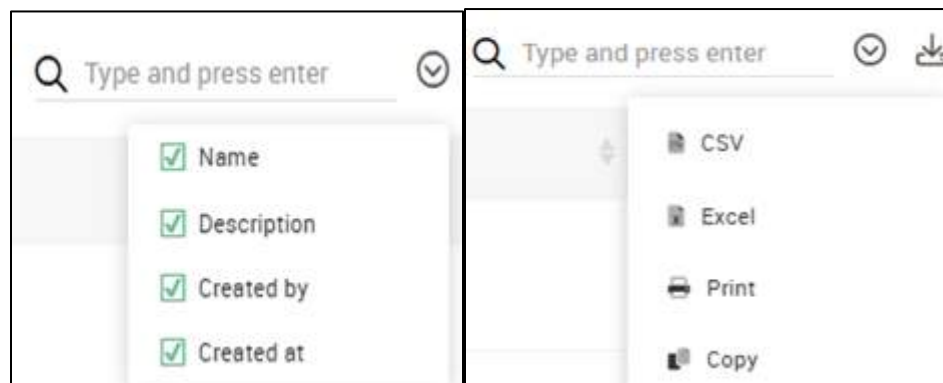

Figure 101: Master Table Search toggle & download options

- Table data can be searched by Name or Description.
- Column toggle access is customizable.
- Select the column names to display the required columns on data table.
- Click on download icon to print, copy or to download table data in CSV & in Excel format.

## Master Table Elements

Master Table Elements consist of various input types that enable users to efficiently manage and organize data. These elements include:

- **Text:** For entering alphanumeric characters such as names or descriptions.
- **Integer:** For numeric values without decimals, such as counts or IDs.
- **Decimal:** For numbers with decimal points, useful for prices or percentages.
- **Textarea:** For longer text inputs, such as comments or detailed descriptions.
- **Checkbox:** For selecting one or multiple options from a list.
- **Dropdown:** For choosing a single option from a predefined list. To add dropdown options,
  - Selection dropdown from field type.
  - Click on Options.
  - Input value and label.
  - Click on save on the option modal.
  - Click on save on the add element modal.
- **Radio:** For selecting one option from a set of mutually exclusive choices.
  - Selection radio from field type.
  - Click on Options.
  - Input value and label.
  - Click on save on the option modal.
  - Click on save on the add element modal.
- **Date:** For picking dates from a calendar interface.

These elements ensure flexible and accurate data entry within the Master Table.

## Create Master Table Element

Figure 102: Add Master Table Element

To create a master table element, follow the below steps,

- Navigate to **Menu** → **More** → **Master Table**.
- Select a master table and options will be available above the table header.
- Click on the elements icon & elements page will be opened in a new tab.
- Click on the add icon.
- Input the fields as required.
- Click on save.

## Edit Master Table Element

The screenshot shows the Robo2 application interface. On the left, there is a sidebar with navigation options: Announcement, Requested Downloads, and Master Table. The main area displays a table with columns: Field Name, Field Type, Default Value, Required, Unique, and Unique Together. A modal titled 'Edit Element' is open, showing fields for editing a master table element. The modal includes a warning: '\* Star (\*) marked fields are mandatory'. The fields are: Field Name (Student Name), Field Type (Integer), Min Limit (1), Max Limit (100000), Default Value, Required (Yes), Unique (No), and Unique Together (No). There are 'UPDATE' and 'CANCEL' buttons at the bottom of the modal.

Figure 103: Edit Master Table Element

To edit a master table element, follow the below steps,

- Navigate to **Menu → More → Master Table**.
- Select a master table and options will be available above the table header.
- Click on the elements icon & elements page will be opened in a new tab.
- Select an element and options will be available above the table header.
- Click on the edit icon.
- Input the fields as required.
- Click on save.

## Delete Master Table Element

The screenshot shows the Robo2 application interface. On the left, there is a sidebar with navigation options: Announcement, Requested Downloads, and Master Table. The main area displays a table with columns: Field Name, Field Type, Default Value, Required, Unique, and Unique Together. A modal titled 'Delete Element' is open, showing a warning: 'Are you sure? You will not be able to recover the Information!'. There are 'YES, DELETE!' and 'NO, CANCEL!' buttons at the bottom of the modal.

Figure 104: Delete Master Table Element

To delete a master table element, follow the below steps,

- Navigate to **Menu** → **More** → **Master Table**.
- Select a master table and options will be available above the table header.
- Click on the elements icon & elements page will be opened in a new tab.
- Select an element and options will be available above the table header.
- Click on the delete icon.
- Input the fields as required.
- Click on “Yes, Delete!”.

### Search, toggle and Download

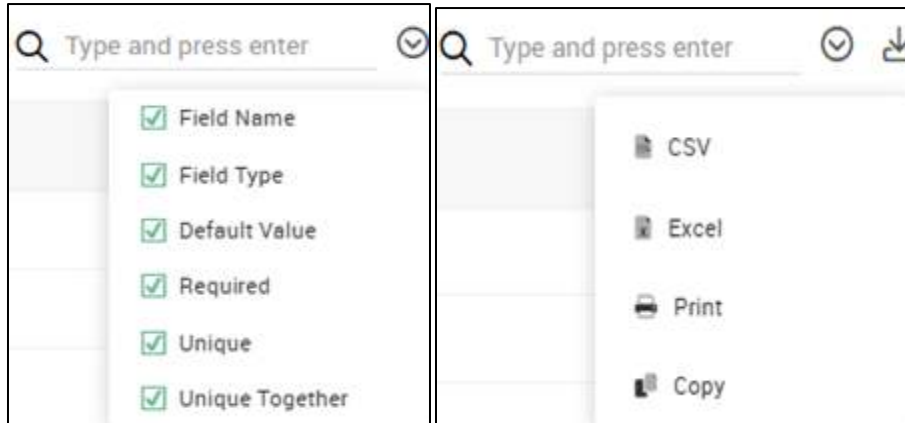

Figure 105: Master Table Search toggle & download options

- Table data can be searched by Name or Description.
- Column toggle access is customizable.
- Select the column names to display the required columns on data table.
- Click on the download icon to print, copy or to download table data in CSV & in Excel format.

### Master Table Records

**Master Table Records** store and organize data associated with the Master Table Elements, such as text, numbers, checkboxes, and dates. Records can be added manually or uploaded in bulk using a CSV template, supporting up to 50 lacs of data entries. This flexibility allows users to efficiently manage large volumes of structured information within the Master Table.

### Create Master Table Records

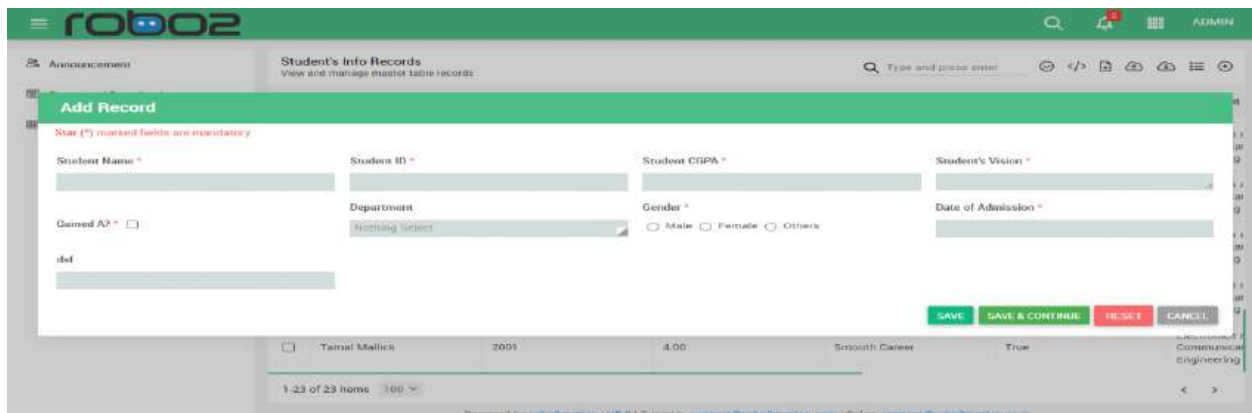

Figure 106: Add Master Table Records

To add master table records, follow the below steps,

- Navigate to **Menu → More → Master Table**.
- Select a master table and options will be available above the table header.
- Click on the records icon & records page will be opened in a new tab.
- Click on the add icon.
- Input the fields as required.
- Click on save.
- Click on save & continue to add multiple records without closing the add records modal.
- Click on reset to erase all the present data and add new data & click on save.

Figure 108: Delete Master Table Records

To delete master table records, follow the below steps,

- Navigate to **Menu → More → Master Table**.
- Select a master table and options will be available above the table header.
- Click on the records icon & records page will be opened in a new tab.
- Select a record and options will be available above the table header.
- Click on the delete icon.
- Click on “Yes, Delete!”.

## Record Table Options

### Import/Export records

The Import and Export feature for Master Table Records enables efficient data management. Users can import bulk records using a predefined CSV template, allowing bulk data entry while maintaining consistency with Master Table Elements. The export function allows users to download records in a CSV format for reporting, analysis, or backup purposes. This feature ensures seamless data integration and retrieval within the Master Table Record Template.

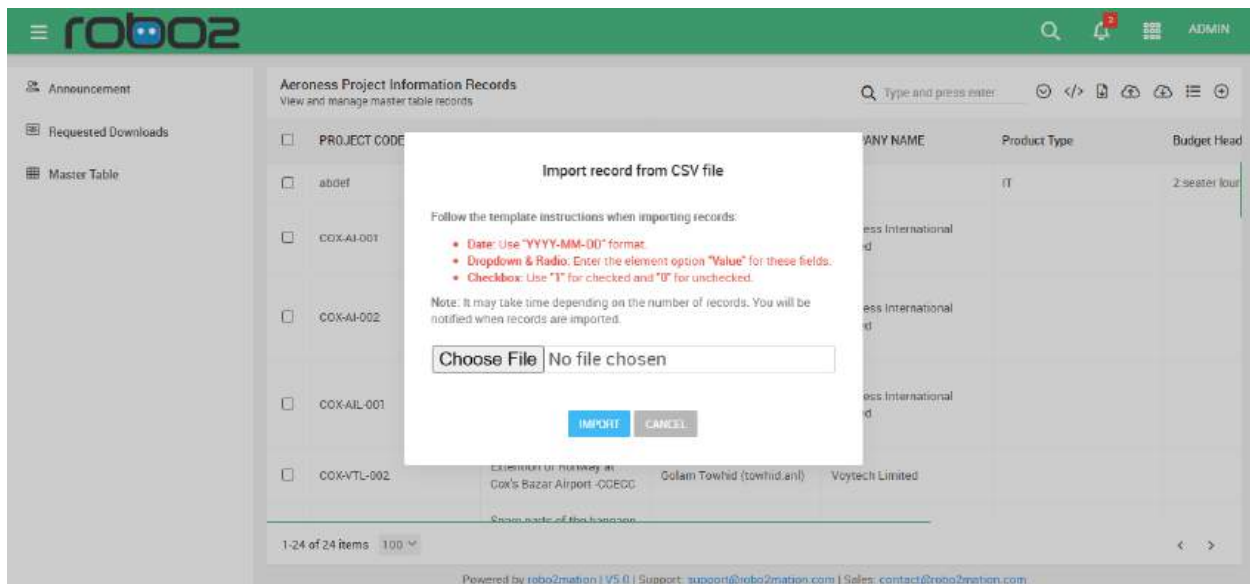

Figure 109: Import Record

To import master table records, follow the below instructions,

- Navigate to **Menu → More → Master Table**.
- Select a master table and options will be available above the table header.
- Click on the records icon & records page will be opened in a new tab.
- Click on the template option.
- Download the csv template and fill it up with the required data.
- Click on the import record icon & make sure to follow the upload instructions.
- Click on choose file section.
- Click on import.
- Once data is uploaded it will be displayed on the table records page.
- If failed to upload records, a downloadable error report will be accessible in notification which will redirect to “Requested Downloads” page.
- Error reports can be downloaded from the requested download page.

To export report, click on the export report icon and a downloadable record report will be accessible in notification which will redirect to “Requested Downloads” page. Records can be downloaded from “Requested Download” page.

## API Documentation

The api documentation can be accessed by clicking on the “view api documentation” (</>) icon. The documentation describes how to add records to the master table using a 3<sup>rd</sup> party tool (example: postman) using api permissions.

# Report

## Core

### Core: Login Report

The **Core Login Report** records all user login activities, allowing admins or authorized users to track and access detailed login history.

| User                         | Login Time                 | Logout Time                | Source IP     |
|------------------------------|----------------------------|----------------------------|---------------|
| System Administrator (admin) | Feb 19th 2025, 12:56:48 pm | N/A                        | 103.30.28.193 |
| FC Tester (testv5)           | Feb 19th 2025, 12:04:53 pm | Feb 19th 2025, 12:56:44 pm | 103.30.28.193 |
| FC Tester (testv5)           | Feb 19th 2025, 10:48:14 am | N/A                        | 103.30.28.109 |
| System Administrator (admin) | Feb 19th 2025, 9:52:22 am  | N/A                        | 103.30.28.193 |
| Md. Al Amin (25q1)           | Feb 19th 2025, 9:43:27 am  | N/A                        | 103.30.28.193 |

| FC Tester (testv5)           | Feb 19th 2025, 9:05:27 am  | N/A                        | 103.30.28.193 |
| System Administrator (admin) | Feb 19th 2025, 8:58:04 am  | Feb 19th 2025, 9:43:19 am  | 103.30.28.193 |
| System Administrator (admin) | Feb 19th 2025, 8:32:46 am  | N/A                        | 103.30.28.193 |
| FC Tester (testv5)           | Feb 19th 2025, 8:25:24 am  | N/A                        | 103.30.28.193 |

Figure 110: Core Login Report

To access the core login report, follow the below steps,

- Go to **Menu** → **Report** → **Core** → **Login**
- User can filter date range wise and see user’s login hours
- Also, can search username and IP address
- Users can copy, print or download csv and excel report by clicking on “Copy”, “Print”, “CSV” & “Excel” buttons respectively.

**NOTE:** Users with “Admin” role permission and “Core Report Manager” will get access to all users’ “Login” report. Any general user without “Core Report Manager” permission will get access only their individual “Login” report.

## Filter, Column Toggle & Download

- Data can be filtered with the user filter option and date range.
- With the toggle option user can customize the data table columns.
- Only selected columns in toggle option will be displayed in the data table.
- With the Download icon, the data table information will be downloaded in excel format.

## Core: Activity Report

The **Core Activity Report** logs all core activities performed by users, providing admins or authorized users with a comprehensive view of user actions within the system.

| User                         | Operation                    | Description                                                                                         | Date Time                  | Source Ip     |

Figure 111: Core Activity Report

To access the core activity report, follow the below steps,

- Go to **Menu → Report → Core → Activity Report**.
- All the user management related activities are recorded here.
- User can filter date range wise.
- Also, can search name, operation and source IP.
- Users can copy, print or download CSV & Excel reports by clicking on “Copy”, “Print” & “CSV”, “Excel” buttons respectively.

**NOTE:** Users with “Admin” role permission and “Core Report Manager” will get access to all users’ “Activity” report. Any general user without “Core Report Manager” permission will get access only their individual “Activity” report.

## Filter, Column Toggle & Download

- Data can be filtered with activity operation filter, the user filter option and date range.
- With the toggle option user can customize the data table columns.
- Only selected columns in toggle option will be displayed in the data table.
- With the Download icon, the data table information will be downloaded in excel format.

## Workflow

### KPI Report

The **KPI Report** provides a performance overview by displaying the percentage of tasks categorized as pending, at risk, overdue, completed, completed before the due date, and completed after the due date. This helps track the progress and efficiency of task management, highlighting areas that require attention or improvement.

| User                                   | Pending (%) | Risk (%) | Overdue (%) | Completed (%) | Completed Bef |
|----------------------------------------|-------------|----------|-------------|---------------|---------------|
| System Administrator (admin)           | 17.78       | 0        | 17.78       | 82.22         | 63.75         |
| Alamin Two Shohan Three (slamin)       | 17.57       | 0        | 17.57       | 82.43         | 68.77         |
| Moinul Islam (moinul)                  | 45.2        | 0        | 45.2        | 54.8          | 42.6          |
| Arman Hossain (arman)                  | 30.36       | 0        | 30.36       | 69.64         | 55.36         |
| Tonmoy T Hossain H (tonmoy)            | 4.35        | 0        | 4.35        | 95.65         | 34.78         |
| Rifat Hossain (rifat)                  | 86.36       | 0        | 86.36       | 13.64         | 13.64         |
| Zishan Hossain (zishan)                | 27.96       | 0        | 27.96       | 72.04         | 53.76         |
| Anit Hossain (anit.deleted_user_54337) | 87.5        | 0        | 87.5        | 12.5          | 0             |
| Test Users (abir.kuddus)               | 6.25        | 0        | 6.25        | 93.75         | 50            |

Figure 112: KPI Report

To access the KPI report, follow the below steps,

- Go to **Menu** → **Report** → **Workflow** → **KPI Report**.
- The workflow “KPI REPORT” has been built with department and user wise filter.
- The department and user lists will be loaded as per permission. By default, admin will get all departments and users.
- If any department is selected, KPI of all individual users of the selected department will be shown in the data table.
- Selecting any user from the user list will show that individual users KPI REPORT.
- KPI data is exportable in csv and excel format.
- A general user will only see his KPI.

### Search, filter, toggle & download

- Data can be searched by user.
- Data can be filtered by department, user and date range.
- With the toggle option user can customize the data table columns.
- Only selected columns in toggle option will be displayed in the data table.
- With the Download icon, the data table information will be downloaded in excel format.

## Activity Report

The report will comprehensively log all activities related to **Manage Process**, including **Workflow Design**, **Weekends & Holidays**, and **Process Categories** actions. It provides users with a clear and detailed record of each design process activity and any modifications made to workflow components, ensuring complete traceability.

| User                         | Process       | Operation                   | Description                                                                                                   | Date Time                  | Source Ip     |

Figure 113: Activity Report

To access the task activity report, follow the below steps,

- Go to **Menu** → **Report** → **Workflow** → **Activity Report**.
- Admin/Permitted Users can see all workflow design activity, weekend & holiday changes activity & process category changes activity from Activity Report.
- Can see all his/her process operation and description.
- Can see date range wise workflow design activity. To do so just need to select start and finish date and click apply.
- Can download the workflow design activities CSV & Excel by clicking on the CSV & Excel button.
- By simply clicking on the print button, can print the workflow design activities.
- By clicking on the copy button, also can copy the workflow activities.

### Note:

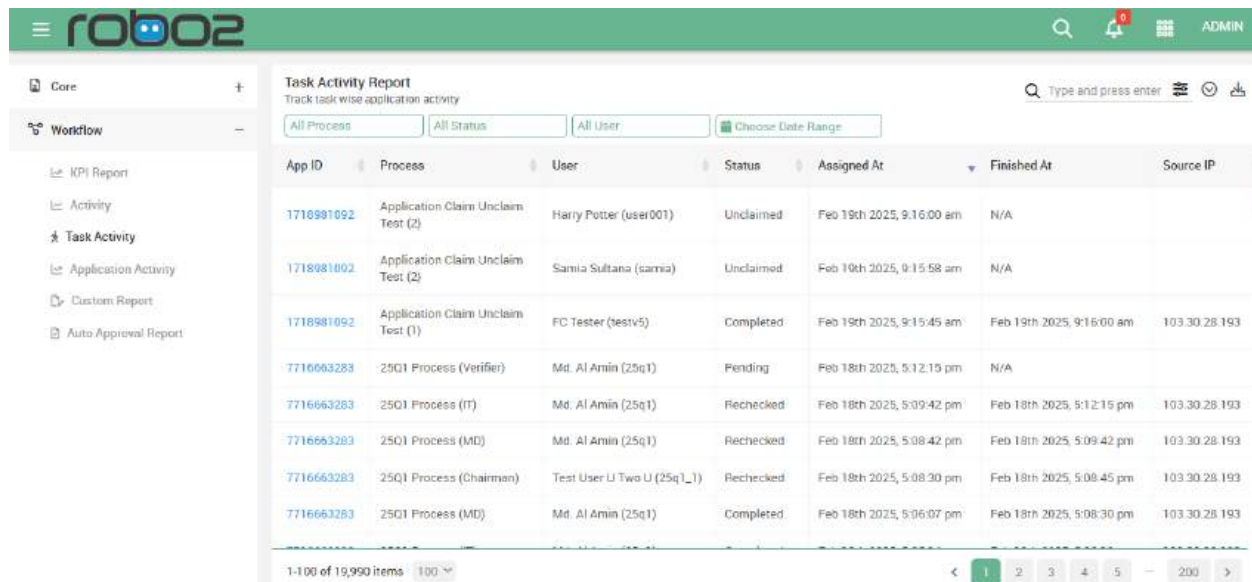

- General user without any permission, will get his participated applications only.
- User having “Related Process Information” will get all application of related processes. So, system should show all related processes where user is assigned at least in one task.
- User having “All Process Information” will get all applications of all processes in the system.

### Search, filter, toggle & download

- Data can be searched by User, Operation or Source IP.
- Data can be filtered by process, application status, user and date range.
- With the toggle option user can customize the data table columns.
- Only selected columns in toggle option will be displayed in the data table.
- With the Download icon, the data table information will be downloaded in excel format.

## Task Activity Report

The **Task Activity Report** provides a detailed view of all tasks within an application. If an application consists of multiple steps, each task will be recorded and displayed individually, allowing users to track progress and monitor actions taken at each stage.

| App ID     | Process                            | User                       | Status    | Assigned At               | Finished At               | Source IP     |
|------------|------------------------------------|----------------------------|-----------|---------------------------|---------------------------|---------------|
| 1716981092 | Application Claim Unclaim Test (2) | Harry Potter (user001)     | Unclaimed | Feb 19th 2025, 9:16:00 am | N/A                       |               |

| 7716663283 | 25Q1 Process (MD)                  | Md. Al Amin (25q1)         | Completed | Feb 18th 2025, 5:06:07 pm | Feb 18th 2025, 5:08:30 pm | 103.30.28.193 |

Figure 114: Task Activity Report

To access the task activity report, follow the below steps,

- Go to **Menu** → **Report** → **Workflow** → **Task Activity**.
- Admin can get access to all user's task activity report.
- General users can only see their task activity report.
- Admin or users can download the task activities CSV & Excel by clicking on the CSV & Excel button.
- Also, can print the task activities by simply clicking on the print button.
- Also, can copy the task activities by clicking on the copy button.

### Note:

- General user without any permission, will get his participated applications only.
- User having "Related Process Information" will get all application of related processes. So, system should show all related processes where user is assigned at least in one task.
- User having "All Process Information" will get all applications of all processes in the system.

### Search, filter, toggle & download

- Data can be searched by Process, App ID, User, Status or Source IP.
- Data can be filtered by process, application status, user and date range.
- With the toggle option user can customize the data table columns.
- Only selected columns in toggle option will be displayed in the data table.
- With the Download icon, the data table information will be downloaded in excel format.

## Application Activity

The **Application Activity Report** provides a consolidated view of an application's progress, displaying a single record that summarizes all tasks and actions taken throughout the entire application process.

| App ID     | Process                        | Current User               | Status    | Initiator                  | Created At                | Finished At               |
|------------|--------------------------------|----------------------------|-----------|----------------------------|---------------------------|---------------------------|
| 1718981092 | Application Claim Unclaim Test | Harry Potter (user001)     | Unclaimed | FC Tester (testv5)         | Feb 19th 2025, 9:15:45 am | N/A                       |
| 8405140299 | 2301 Process 23                | Test User U Two U (25q1_1) | Approved  | Md. Al Amin (25q1)         | Feb 18th 2025, 4:36:41 pm | Feb 18th 2025, 4:36:41 pm |
| 2380786431 | 2301 2nd                       | User Two (25q1_2)          | Approved  | Test User U Two U (25q1_1) | Feb 18th 2025, 2:55:33 pm | Feb 18th 2025, 2:55:33 pm |
| 5559221048 | 2301 2nd                       | Md. Al Amin (25q1)         | Approved  | Test User U Two U (25q1_1) | Feb 18th 2025, 2:55:11 pm | Feb 18th 2025, 2:55:11 pm |
| 7078122946 | 2301 2nd                       | User Two (25q1_2)          | Approved  | Test User U Two U (25q1_1) | Feb 18th 2025, 2:54:22 pm | Feb 18th 2025, 2:54:22 pm |
| 9679474982 | 2301 2nd                       | User Two (25q1_2)          | Pending   | Test User U Two U (25q1_1) | Feb 18th 2025, 2:52:31 pm | N/A                       |
| 4567785393 | 2301 2nd                       | User Two (25q1_2)          | Approved  | Test User U Two U (25q1_1) | Feb 18th 2025, 2:50:08 pm | Feb 18th 2025, 2:50:08 pm |

| 7716663283 | 2501 Process                   | Md. Al Amin (25q1)         | Pending   | Test User U Two U (25q1_1) | Feb 18th 2025, 2:16:15 pm | N/A                       |

Figure 115: Application Activity Report

This feature allows monitoring all the process that have been initiated and running through the process.

- Go to **Menu** → **Report** → **Workflow** → **Application Activity**.
- Admin and permitted users can see all the processes that have been initiated, completed, rejected, Pending, Unclaimed.
- Admin and permitted users have the access to check all the process status with application ID, which user has initiated the process and current user.
- Admin and permitted users can also filter processes by process status (Approved, Pending, Unclaimed, Rejected) and can check each process by searching process name.

### Note:

- General user without any permission, will get his participated applications only.
- User having “Related Process Information” will get all application of related processes. So, system should show all related processes where user is assigned at least in one task.
- User having “All Process Information” will get all applications of all processes in the system.

### Search, filter, toggle & download

- Data can be searched by App ID, Process, Current User or Initiator.
- Data can be filtered by process, application status, current user, initiator.
- With the toggle option user can customize the data table columns.
- Only selected columns in toggle option will be displayed in the data table.
- With the Download icon, the data table information will be downloaded in excel format.

## Custom Report

The **Custom Report** feature allows users to create report templates using **eForm fields** and customize them as needed. Multiple templates can be designed for a single process, providing flexibility in reporting. On the **Custom Report** page, additional information for each initiated application is displayed in a structured data table for easy reference and analysis.

| App ID     | Initiator Name               | Created Date              | Status    | Completed Date            | Completed By Task |
|------------|------------------------------|---------------------------|-----------|---------------------------|-------------------|
| 2976165126 | Samia Sultana (samia)        | Dec 30th 2024, 4:53:08 am | Pending   | N/A                       | N/A               |
| 6912529221 | Samia Sultana (samia)        | Dec 30th 2024, 4:00:15 am | Rejected  | Dec 30th 2024, 4:00:49 am | Reviewer          |
| 5587368376 | Samia Sultana (samia)        | Dec 30th 2024, 3:52:10 am | Pending   | N/A                       | N/A               |
| 8843439670 | Samia Sultana (samia)        | Dec 30th 2024, 3:48:03 am | Approved  | Dec 30th 2024, 3:55:33 am | P-2               |
| 4553055213 | Samia Sultana (samia)        | Dec 18th 2024, 5:41:39 am | Pending   | N/A                       | N/A               |
| 5896213032 | System Administrator (admin) | Dec 11th 2024, 9:00:24 am | Unclaimed | N/A                       | N/A               |
| 540614758  | System Administrator (admin) | Oct 29th 2024, 9:10:17 am | Pending   | N/A                       | N/A               |

Figure 116: Custom Report

To access a particular process custom report, follow the below steps,

- Go to **Menu** → **Report** → **Workflow** → **Custom Report**.
- Select all the dropdown parameters as required by the user.
- Results will be shown accordingly.
- Admin can copy and download the information in excel file.
- Admin can also print the information by clicking on the “print” option.
- Admin can also get a general report searching by application ID, status, column name

### Search, filter, toggle & download

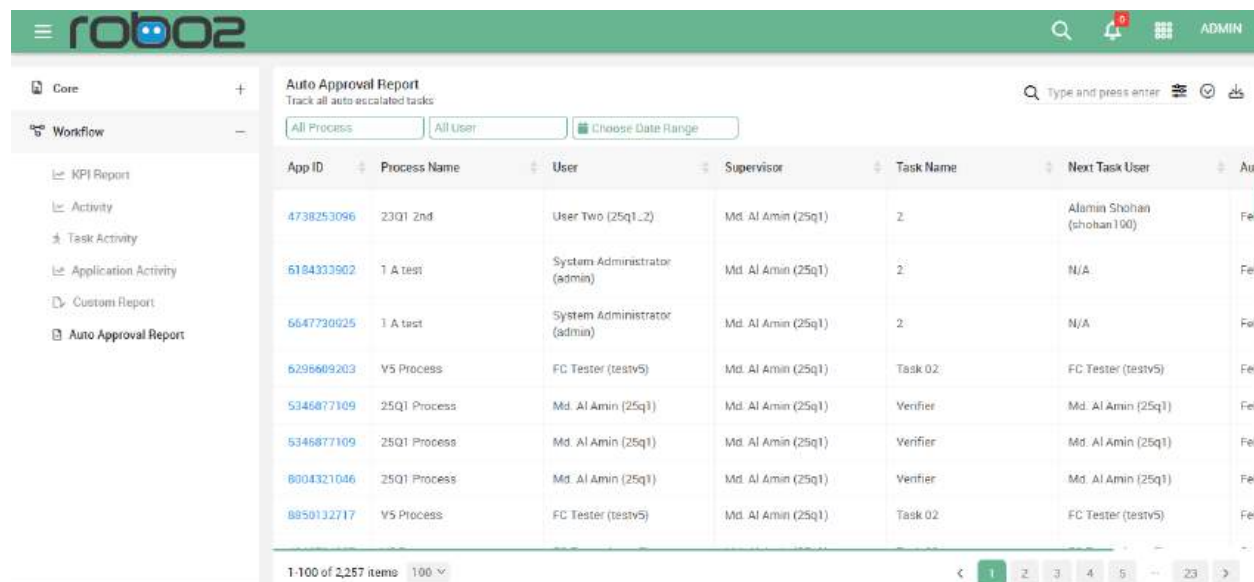

- Data can be searched by template data.
- Data can be filtered by process, custom report, application status, initiator and date range.
- With the toggle option user can customize the data table columns.
- Only selected columns in toggle option will be displayed in the data table.
- With the Download icon, the data table information will be downloaded in excel format.

### Note:

- General user without any permission, will get his participated applications only.
- User having “Related Process Information” will get all application of related processes. So, system should show all related processes where user is assigned at least in one task.
- User having “All Process Information” will get all applications of all processes in the system.
- “Admin” role user will get “Related Process Information” & “All Process Information” permission.
- The report template will have the option to mark report as Private/confidential. There will be an option to mention report viewer groups. Only user of those groups will access the report.

## Auto Approval Report

The **Auto Approval Report** displays applications that have exceeded the **SLA time** and were automatically approved due to **auto-escalation** being activated. This report ensures transparency in tracking system-driven approvals.

| App ID     | Process Name | User                         | Supervisor         | Task Name | Next Task User            | Aut |
|------------|--------------|------------------------------|--------------------|-----------|---------------------------|-----|
| 4738253096 | 23Q1 2nd     | User Two (25q1..2)           | Md. Al Amin (25q1) | 2         | Alamin Shohan (shohan100) | Fe  |
| 6184333902 | 1 A test     | System Administrator (admin) | Md. Al Amin (25q1) | 2         | N/A                       | Fe  |
| 6647730925 | 1 A test     | System Administrator (admin) | Md. Al Amin (25q1) | 2         | N/A                       | Fe  |
| 6296869203 | V5 Process   | FC Tester (testv5)           | Md. Al Amin (25q1) | Task 02   | FC Tester (testv5)        | Fe  |
| 5346877109 | 25Q1 Process | Md. Al Amin (25q1)           | Md. Al Amin (25q1) | Verifier  | Md. Al Amin (25q1)        | Fe  |
| 5346877109 | 25Q1 Process | Md. Al Amin (25q1)           | Md. Al Amin (25q1) | Verifier  | Md. Al Amin (25q1)        | Fe  |
| 8004321046 | 25Q1 Process | Md. Al Amin (25q1)           | Md. Al Amin (25q1) | Verifier  | Md. Al Amin (25q1)        | Fe  |
| 8850132717 | V5 Process   | FC Tester (testv5)           | Md. Al Amin (25q1) | Task 02   | FC Tester (testv5)        | Fe  |

Figure 117: Auto Approval Report

To access the auto approval report, follow the below steps,

- Go to **Menu** → **Report** → **Workflow** → **Auto Approval Report**
- Applications can be filtered by process & date range
- Application report can be exported in csv & excel

### Note:

- General user without any permission, will get his participated applications only.
- User having “Related Process Information” will get all application of related processes. So, system should show all related processes where user is assigned at least in one task.
- User having “All Process Information” will get all applications of all processes in the system.

### Search, filter, toggle & download

- Data can be search by UserName, Application Number, Process Name.
- Data can be filtered by process, users & date range.
- With the toggle option user can customize the data table columns.
- Only selected columns in toggle option will be displayed in the data table.
- With the Download icon, the data table information will be downloaded in excel format.
